LABORATORY WORKSTATION FOR YOUR COMPUTER

Professional instrumentation with the I40I intelligent laboratory interface

Compatible with the BBC model B, B+
and the new Master range, and all
the Acorn second processors.

- Full 12 bit analogue input and output
- Up to 2 Mbytes of internal memory
 - Multi-tasking operation
 - Full laboratory software –
including FFTs – is included
- Application programs including Spectrum
Analyser, Signal Averager, PSTH and INTH.

Designed and made in Cambridge, England

It runs just as fast with the Apple,
Apricot, HP, IBM or Nimbus too!

Cassette **£9.95**

Disc **£11.95**

**THE RECENTLY RELEASED BBC MICRO
VERSION HAS BEEN GREETED WITH
ACCLAIM AND INCREDULITY.—**

At last, speech synthesis at a price you can afford. SPEECH! works entirely in software taking up less than 9K of RAM: no extra hardware whatsoever is required. Unlike other systems, SPEECH! has an unlimited vocabulary: it will say anything you want it to, and is simplicity itself to use. Simply type in: ***SAY I AM A TALKING COMPUTER, AS EASY TO USE AS 1 2 3...** and the computer speaks.

SPEECH! has a built-in parser which translates English words into "phonemes", or speech particles. There are 49 phonemes and 8 different pitch settings which can be used directly by the *SPEAK command (e.g. *SPEAK/HEH4LOW4) so stress or intonation can easily be added wherever desired. You can change the overall pitch with the *PITCH command.

Every copy of SPEECH! comes complete with extra software:

- DEMO — shows off all the features,
- SPELL — an innovative educational program,
- SAYFILE — speaks the lines of your programs.

Applications in:

- games
- education
- business
- utilities

REVIEWS ON BBC-1 AND BBC-2 TV

Saturday Superstore (BBC-1)

"This is knockout! This is great!... Wonderful! Very, very clever"... Fred Harris

Micro Live (BBC-2)

"Really good value!"... John Coll

REVIEWS IN THE COMPUTER PRESS

"The reproduction is surprisingly good, and certainly on a par with some of the more expensive speech interfaces I have heard. An excellent low cost speech synthesiser that really is very good value for money."... ACORN USER

"... Incredibly easy to use. The end result is as good as anything I've heard this side of the Amiga."... POPULAR COMPUTING WEEKLY

"Overall an excellent package"... MICRONET 800.

"This is one utility which cannot be beaten on quality or price"... The MICRO USER.

"SPEECH! from Superior Software is a truly remarkable offering. A rare gem indeed. Superior Software has produced a price breakthrough by achieving an apparent technical impossibility"... A & B COMPUTING.

WE PAY TOP ROYALTIES FOR HIGH QUALITY SOFTWARE

SPEECH!

was greeted with admiration and acclaim by the computer press

(for the BBC Micro)

“ Overall an excellent package.

Value for Money	5
Presentation	5
Use of Machine	5
Ease of Use	4
Facilities	5
Effectiveness	4

Total Score out of 30: 28 ”
 MICRONET 800, December 1985

“ Superior Software's SPEECH! is a quite remarkable piece of programming. ... The program takes up 7½ K of program space and is incredibly easy to use. It merely requires a new command word which is SAY preceded by a *. ... The end result is as good as anything I've heard this side of the Amiga and it'll make a stab at even the most ludicrous words constructed without vowels and at great length. ... It is

possible to add words to the computer dictionary where they are not said exactly as they would be, using phoneme analysis and also to vary the pitch of the spoken voice. ... Why pay more? ”
 Popular Computing Weekly, 19-25 December 1985.

“ The reproduction is surprisingly good and certainly on a par with some of the more expensive speech interfaces I have heard. All in all, an excellent low cost speech system that really is very good value for money. ”
 Bruce Smith, Acorn User, February 1986.

“ SPEECH! from Superior Software is a truly remarkable offering. A rare gem indeed among the morass of mediocre to competent efforts which dominate a reviewer's postbag. In my view SPEECH! is an absolute breakthrough for the BBC micro which deserves to sell by the thousand. ... Superior Software has produced a price breakthrough by achieving an apparent technical impossibility. David Hoskins, the programmer, has cleverly programmed the sound chip to do things which its designers never intended it to do. ... A most practical application example also provided is a spelling checker. This has

always been a problem case for educational software — how to test spellings without printing the word and revealing all. ... This program is well designed and effective and users are encouraged to customise it with their own examples. In short, SPEECH! is a very clever and useful program being offered at a silly price. If you were planning to buy another arcade game, take my advice and spend the money on SPEECH! instead. ”
 Jonathan Evans, A & B Computing, March 1986.

“ SPEECH! is the most talked-about package ever created for the BBC Micro. For the first time it endows your micro with the power of speech for an incredibly low price. ”
 Christopher Payne, The Micro User, April 1986.

“ If I were a manufacturer of a speech synthesis product I would be greatly worried by the arrival of SPEECH! This is one utility that cannot be beaten on quality or price. ”

COMPETITION COMPETITION COMPETITION COMPETITION

THE QUIZ

1. In which year did Superior Software release their first software cassette?
2. Can a computer be manufactured without using integrated circuits or transistors?
3. Which U.K. company manufactured the coin-operated arcade machine of the successful game Hunchback?
4. Name the author of Superior Software's SPEECH! program?
5. What was the name of the acclaimed home computer sold by Commodore before they produced the Commodore-64?
6. Which Superior Software game won the "Computer Gamer" Game of the Year Award for the Best BBC Game of 1985?
7. Name the Managing Director of Amstrad Consumer Electronics PLC?
8. Which of the following is not a valid phoneme representation as used in Superior Software's SPEECH!
 EE UH C M NX ZH
9. What does the acronym ASCII stand for?
10. How do you spell the word "azure" phonetically in order to be pronounced correctly by the *SPEAK command of Superior Software's SPEECH! program?

HOW TO ENTER

To enter, simply complete the 10-question quiz (on the left), and describe what you think is the most useful application for SPEECH! The completed entry form should be sent to Superior Software at the address given below.

THE PRIZES

Each entrant who answers the 10 question quiz correctly will receive a colourful SPEECH! badge (pictured left). All correct entrants will then be considered for the main prize of a pair of professional walkie-talkies (valued at £200), a trophy, and the cash prize of £100. The winner of this prize will be determined at the close of the competition on 31st January, 1987. The winner will be the person who has correctly completed the 10 question quiz and, in the opinion of the judges, describes the most useful application of Superior Software's SPEECH! program.

RULES

1. All entries must be accompanied by a completed entry form and a description (on a separate sheet) of what, in your opinion, is the most useful application of SPEECH!
2. All entries must clearly show the sender's name, address and age (if under 18), and should be addressed to: "SPEECH! Competition", Superior Software Ltd, Regent House, Skinner Lane, Leeds LS7 1AX.
3. The closing date for receiving entries to the competition is 31st January 1987.
4. The company's decision is final and no correspondence can be entered into.
5. The competition is not open to the employees of Superior Software Ltd, the authors of SPEECH! their agents or their families.

Describe the most useful application of SPEECH! that you can envisage. (Please write your description on a separate sheet using more than 50 words, but not more than 200 words).

16k EPROM
Advanced Disc Toolkit
containing over 30 commands

Advanced Computer Products

Advanced Computer Products
6 Ava House, High Street,
Chobham, Surrey GU24 8LZ
(0276) 76545

ADVANCED DISC TOOLKIT

(01) /M/B/E

£34.50

Any Acorn user including Master, BBC B+, Electron, DFS, 1770 DFS, ADFS, 2nd. & co-processors A.C.P.'s BEST SELLING product containing over 30 commands inc.: - powerful memory & disc editor, search memory/disc/basic, catalogue/unplug ROMS, load/run programs below page, automatic menu, file transfer (inc. locked cassette files), ADFS utils etc. etc. ("it's superb" ... Database Pubs. - "excellent value for money" ... Acorn User) (16K EPROM & FULL MANUAL)

ADVANCED ROM ADAPTOR 2

(03) /M/E+1/

£14.95

An Acorn approved cartridge containing a card with special 'zero' profile sockets that allow you to fit compatible 8K or 16K EPROMS/ROMS. The cartridge is fully enclosed providing complete protection for your ROMS. Simple to use -no switching-complies fully to the Acorn (sideways) Rom Filing System. A.R.A.2 contains 2 sockets.... A single adaptor is also available.... A.R.A.1 (02) /E/ £10.35

ADVANCED SIDEWAYS RAM

(04) /E+1/

£29.90

A highly versatile but simple to use s/w RAM cartridge that is automatically write protected on loading. Contains 16K RAM but can be switched (externally) to 2 X 8K RAM. Supplied with instructions & full software support (on cassette) to save ROM images to disc/tape, load RAM from file, Advanced Print Buffer & MakeRom a utility to merge several files from disc to be run from the ROM FS. (S/Ware on disc: please add ... £1 5/4 DFS .. £2 3/2 ADFS)

ADVANCED ELECTRON DFS

(05) /E/

£24.15

Electron & Plus 3 users ... gain BBC compatibility by adding the Advanced Electron DFS (1770 DFS) this is the same disc filing system supplied with the BBC B+. Now you can produce and access (compatible) BBC disc based software. A.C.P. also supplies 5/4" disc drives to add to your Plus 3 (inc. 2nd. drive adaptor). "ACP has produced another superb ROM for the Electron" ... Electron User Feb '86 (supplied on 16K EPROM + DFS MANUAL)

ADVANCED DISC INVESTIGATOR

(06) /M/B/E/

£28.75

A very powerful Disc utility for standard & non-standard discs. Backup most protected discs, edit any type of non-standard disc, check & repair faulty tracks, create new disc formats, copy 40track discs to 80track discs, verify two non-standard discs. ("ADI features an extremely comprehensive sector editor, and one of the finest I've seen" ... Tublink on Prestel) (supplied on 16K EPROM + manual)

ADVANCED ROM MANAGER

(07) /M/B/E/

£14.95

A friendly utility for ROM & sideways RAM. Examine ROM/RAMs, load files into RAM, move memory to/from Sways ROM/RAM, catalogue/kill ROMS, offer commands to specific ROMS, save ROMS to disc/tape, AUTOROM a file (inc. BASIC) to run from Sways ROM/RAM, execute specific machine code subroutine in a ROM, generate a ROM's checksum & CRC. *ON ALL ORDERS RECEIVED AFTER 29TH AUGUST* (supplied on EPROM + manual)

ADVANCED PLUS 4

(08) /E+1/

£79.98

"DISC DRIVE COMPATIBILITY AT LONG LAST" ... (Electron User June '86) this sums up AP4 & ACP's approach to producing products. AP4 is a fully ACORN compatible disc I/face & will accept any standard drive inc. PSU, runs 1770 DFS (as fitted in the B+ & Master), keeps page & E00, utils in ROM & provides a spare rom socket. "ACP's PLUS 4 comes out on top. I can recommend it to anyone..." (E.U. June '86) ... AP4 should be considered the standard interface for the Electron (AU July '86) AP4 100 £198.97 (inc VAT & delivery) AP4 400 £228.98 (inc VAT & delivery)

ADVANCED PLUS 5

(09) /E+1/

£66.70

A triple interface cartridge providing...
1) a TUBE i/face allowing a second processor to be connected, increasing BOTH speed & memory (PAGE & 800 HIMEM & 8000 in all modes)
2) a 1 MHz BUS for control applications & prommers
3) the USER PORT for mouse and graphic devices.
Also contains 2/3 ROM sockets and on board operating software for 2nd processor.

ADVANCED 1770 DFS

3 versions ADM (11) - ADB (12)

ADE (13)

£34.50

ACP have totally re-written the Acorn 1770 DFS, enhancing existing features & adding new ones. The result is probably the fastest & most powerful disc filing system your computer could have. With the ability to operate in double density occupying both sides of a disc (640K). Automatic file relocation, improved file handling, 62 file catalogue and Sways RAM can be used as a fast RAM DISC. (16K EPROM + comprehensive manual)

ADVANCED ELECTRON DFS E00

(14) /E+ASR/

£19.99

An alternative to our AED(05) for Plus 3 and ASR users. This optional alternative DFS is designed for use in Sideways RAM (ASR) and allows the user to operate a disc filing system & E00 when using the Plus 3 (in ADFS page would normally be & 1D00). The DFS is simply loaded using the software supplied with the ASR from disc. (optional upgrade for existing AED users £9.50 on return of original EPROM) (3 1/2" ADFS disc + manual)

NEWS

News in brief

● Slogger's Master Ramboard gives the Electron as much memory as a second processor. It acts as shadow RAM, giving up to 28k for Basic and applications, or as a 28k printer buffer.

The kit costs £54.95, or you can send your Electron to Slogger and it will fit the board for £64.95. Slogger is on (0634) 52303.

● Watford has launched the Printer Driver ROM for View users at £32 + VAT. It includes facilities to define pad characters, printer pauses to change daisy wheels, fonts and text colour.

● Acorn's network database, *Supastore*, can be accessed by several users at a time over Econet.

The menu driven program is held in an 8k ROM. Data is held in record format, and the records can be searched using up to 10 criteria.

● The first two software pirates have been prosecuted under the Copyright Act. In separate cases, two men were fined £200. Several other cases are pending.

● Qudos has released two packages for people who want to design their own chips.

Quickchip is a complete hardware and software system, based on the 32-bit Acorn Cambridge Workstation. It includes a 20M hard disc, networking and communications interfaces, and CAD

Design a chip with *Quickchip*

software for £7500. Designs can be sent on disc to Qudos who can return the chips in weeks.

A lower level version of the software is available for the BBC micro at £500.

Details on (0223) 862333.

Master to drive video disc

Acorn has produced a special interactive video version of the Master ready for Domesday.

The BBC's Domesday Project is nearing completion and the company has revealed details of how the end product will look, including a specially modified Master to control the video disc player.

The Domesday Project is the most in-depth survey of the United Kingdom ever undertaken. Led by the BBC, it involves Acorn, Philips, Logica, the Department of Trade and Industry and about 14,000 schools.

The product of all this activity will be a database of over 50,000 pictures and 150,000 pages of text contained on two double-sided video discs. There are maps of all parts of the UK. Text and pictures

can be found using keyword searches. You can take simulated walks around parts of the country and graphs and charts can be created from some of the data.

The discs are played on a Philips LaserVision player controlled by the new Master AIV computer. For the record, it's essentially a Master Turbo fitted with a small computer system interface - a bi-parallel interface, capable of handling large amounts of data.

The new Master also has a Videodisc Filing System (VFS) ROM to handle the blocks of text, still and moving pictures.

Acorn expects that most people will buy the complete system - player, micro, RGB monitor and tracker ball - as a factory-assembled package. However, existing

Turbo owners can upgrade.

The whole system is based on the LaserVision LV-ROM standard (similar to CD-ROM), so the system may attract large businesses and teacher training establishments who can use it to run existing training packages.

The system is planned to appear shortly before Christmas, although the price hasn't yet been fixed. Promotion is already under way, however, with the BBC sending a videotape simulating the Domesday database to key people in education and business. Acorn's Chris Turner said that 'the reaction to the video has been very encouraging.'

More details from Broadcasting Support Services (Domesday), PO Box 7, London W3 6XJ.

New battery pack for the Master

Acorn has cleared up the confusion surrounding the battery replacements on the Master.

Replacements for the original lithium battery, which could overheat as a result of reverse charging, are already being sent out. But some people are concerned that the new battery pack takes up the space, between the power supply and main board, originally reserved for an internal modem or video disc interface. Masters being manufactured now will have this fitted as standard.

The replacement kit consists of three Duracel batteries taped to a metal support plus a new battery

nest. But future replacements, and future Masters, will have a completely new plastic mounting, similar to the original but capable of taking three cells rather than one.

Anyone who has an internal modem or video disc interface installed will also have the new battery mount fitted.

Around 22,000 Masters have been sent out with lithium batteries. Acorn has notified all its dealers, local education authorities, regional health authorities and service centres about the replacements and will be taking advertisements in magazines.

Ring Acorn on (0223) 214411.

FREE SOFTWARE!

That's what we're offering to readers this month to celebrate our 50th issue. The first 100 readers (10 reserved for overseas entries) who send in the coupon below will receive a free copy of this month's listing disc or cassette (state which).

So fill it in, clip it out and send the coupon to: 50th Birthday Offer, Acorn User, 141-143 Drury Lane, London WC2B 5TF.

If I'm one of the first 100, send me a disc/cassette (please delete) of the September listings.

Faster, cheaper Prestel service

Prestel has announced major changes to the system, speeding up the service by allowing keyword searches and faster access rates, and dropping time charges for educational users.

Most of the technical changes should be with us in the next year, but some will not be as advanced as most people had hoped.

Keyword searching will only work on indexes – the main menus at the head of a specific section of

pages. Entering *NEWS, for example, would take you to the main news menu. But you won't be able to search the text itself for specific words. The software for this is currently being tested on the Kipling computer.

This improvement should make Prestel and sub-sections like Miconet faster to use, by cutting out a number of intermediate pages and making directories of page numbers unnecessary. But it is not the kind of database service that many people hoped for.

On the messaging side, users will be offered features such as acknowledgement of receipt and the facility to forward incoming messages to third parties, having attached their own comments.

As with Telecom Gold, you will be able to scan awaiting messages without reading them in full, and reply to ones you have read with the system filling in the recipient's mailbox number for you. Other improvements include longer messages and mailing lists. The bad news is that most of the changes will take around a year, and some of them won't be with us for two years or so.

People who start to use the system more might appreciate the new high speed data modes. By the middle of next year most of the country should be able to access Prestel at 1200 and probably 2400 baud both ways.

On the educational front, Prestel is offering a new tariff. Schools may pay £192 per year, rather than £80, but with no time charges. At 4p a minute with the existing system, any school which accesses Prestel for more than 47 hours per year will benefit.

Check on data users

We may soon see the first court case as a result of the Data Protection Act. The registrar is now examining ways of enforcing the act, a task not dissimilar to finding TV licence dodgers.

Complaints are generating a lot of the investigation work, but the registrar is not relying on them. His staff will be actively pursuing data abusers.

Once the information about registered data users has been put on to computer files, the Registrar's Office will compare the list

of registered users against what the registrar calls 'published lists of potential data users'. These will include trade and other similar directories.

The full force of the law for prosecuting people who misuse data will not be available until November 1987.

But people can already be prosecuted for non-registration. John Lamidey, in charge of investigations, told *Acorn User*: 'There will be a prosecution as soon as we can prove it.'

From humble beginnings . . .

. . . to the bumper issues of today

An interesting year to be 50

ACORN USER celebrates its 50th issue this month. Four years have seen a lot of changes and 1986 will see more than any other since the launch of the BBC micro. Already we've seen the Master, the first worthwhile change since 1981, and there's more to come.

Acorn appears to be almost out of the financial quagmire, although the pruning can be seen in the lack of back-up on the Master and the profiteering on manuals. Problems with the Master have led to fears that show the company still retains the marketing and PR skills of a brick.

The RISC factor

However, faith in the company is strong. The Master is a good computer and there's RISC power on the horizon.

Will Acorn come out of the education closet and tackle the home market?

If Acorn is going to 'do an Amstrad', it had better be done well. Can the company put together advertising as good as Alan Sugar's. The promised campaign for the Master has yet to be seen (or did we all miss it?).

And what effect will the 'internationalisation' of Acorn by Olivetti have?

More questions than answers,

I'm afraid. At present I'm going through all the reader survey forms you've sent us. Editing a magazine like this takes you away from the grass-roots readership, but there's nothing like a hundred survey forms to chop your legs off at the knees and bring you down to earth. You'll be seeing the results before the end of the year.

Write on

For the rest of the time I have to rely on feedback. Keep the letters coming – and send some to Acorn as well. The big boss Brian Long is undoubtedly short of user comment that hasn't been filtered and turned into those damned lies called statistics.

Finally, a plea to the silent majority – women. Things have changed little since my first editorial on the subject more than two years ago. Computing is dominated by men for men. A friend told me earlier she'd rather spend £500 on riding every weekend for a year than on a micro. I can't argue with that.

Still, bigger chips will mean computers can start to do things properly, and Acorn has a good one. It's called RISC. Tell Acorn how to use it.

Tony Quinn

Carve your CAD designs

A new CAD package from Technomatic lets you carve your designs in wood, glass and plastic.

The basic graphics workstation system consists of a three-colour plotter, software and attachments. There is an opto-sensor which can scan a picture to produce a digitised image, which can then be enhanced and modified by the software. This is particularly useful for correcting any glitches in the scanned picture, where bits have dropped out or the sensor has had trouble reading details.

Most interesting is the drill rotor attachment. This can take a variety of bits, including a diamond tool to engrave glass. Other

bits are used for wood and plastic. Most types of wood can be used, but some plastics have problems with the heat generated by the drill bit.

The outfit interfaces with Technomatic's *Novacad* design software. This effectively allows three-dimensional modelling. You can produce two-dimensional designs on up to eight discrete levels. When it comes to transferring the design to wood or plastic each level is plotted individually. By changing the height of the drill bit after each plotting operation, you can produce three-dimensional carvings.

Possible applications for this,

apart from producing works of art, are building models of street plans and creating moulds.

You can also attach other devices. The people at Technomatic have used an airbrush with the plotter to produce repeatable colour paintings.

The cost of the package starts at around £630 with an A3 plotter. Systems can be put together to your own specifications with plotters up to just over A0 in size. The *Novacad* software is sold separately for around £80.

Details and prices are available from Technomatic, 17 Burnley Road, London NW10 1ED. Tel: 01-208 1177.

Bruce's book

The secrets of sideways RAM are laid bare in a new book by *AU* Technical Editor Bruce Smith.

Advanced Sideways RAM User Guide for the Master and BBC Computers covers Acorn's ROM filing system, compatibility tables, a formatter to convert Basic programs to work as ROM software, details of all the SRAM utilities in the Master and full details of how it all works.

All service calls are covered, including the extra ones provided on the Master. There are also 25 programs and routines which illustrate the techniques.

The book costs £9.95. Discs containing the programs in the book are available in Master and BBC versions at £7.95 each, or you can buy the book and disc together for £14.95. All prices include postage. Order from Victory Publishing, PO Box 19, London N11 1DS.

Too many ads

Acorn User has had to reorganise the system for free ads because far more are received each month than we can possibly publish.

If you sent in a free ad which was received before Monday 14 July and it is not in this issue then it is unlikely to be published. From now on, this method will be used and any extra ads which do not make an issue will be disposed of. We hope this will lead to a more efficient service.

Free modems from Micronet

Micronet is giving away modems. Following the lead of the French Teletel system, which gave free viewdata sets to customers, anyone taking out a full year's subscription to Prestel and Micronet will receive a Prism 2000 modem and viewdata ROM.

It now means that getting on to Micronet and Prestel will cost you just under £50 for hardware, software and membership.

Micronet is also giving away money by launching a £1000 software competition. The prize is for a program that increases awareness among able-bodied people of

the problems that society creates for the handicapped.

The closing date is 30 November, and more details are available from Micronet or from David Wrinch, PHAB, Tavistock House North, Tavistock Square, London WC1H 9HL.

Finally, the multi-user Micronet game *Shades* (above) is now planned for an early September launch. It is currently being tested by a few avid games players whose job is to uncover the bugs. There will be no subscription charge for the game but there is a time charge of 99p an hour.

Health fears in the House

Controversy continues to bubble in the Commons over whether classroom computer monitors are a potential health hazard to pupils. One backbencher who is worried about the long-term effects of VDUs is Gerry Bermingham, Labour Member for St Helen's South. He wanted to know just what research had been carried out by the Government into the effects of VDUs on children.

The Health Minister Ray Whitney, replied that no research was being carried out at present, and added: 'None is planned as I am advised it is not warranted.'

Nor, he said, had the Government received any representations about the health effects of monitors on children. 'There is no indication that children in general are at risk from using visual display units,' insisted Mr Whitney.

Mr Bermingham was surprised at the Minister's dismissive response. In particular he was put out by the Whitehall attitude in the light of widespread concern voiced over the effect of VDU screen radiation on pregnant women. The Minister's reply, he complained, was 'short-sighted'.

MD400B

We've put our finger on a nagging little problem.

Instead of having to fumble behind your disc drive to change from 40 to 80 tracks, UFD drives have the switch conveniently located on the front panel.

A feature which reflects UFD's attention to detail and the care taken to ensure that the designs are based on the consumers needs.

Quality, too, is of paramount importance and UFD are proud of their high standard of design and quality control.

All of this may lead you to expect a premium price - not so. In spite of the care taken to

ensure that UFD's complete range of single and twin disc drives meet the most demanding standards (manufactured to BS 415 - approval pending); UFD drives are competitively priced - ask your dealer for details.

MORLEY ELECTRONICS

The Morley Teletext adapter introduces you to the world of Teletext at a price that won't break the bank. Inside it you will find the latest in second generation Teletext chip technology, which unlike our rivals who are still using chips designed more than eight years ago, will be fully compatible with any future advances in the Teletext system.

With the Morley adapter you will get a unit that automatically tunes itself in to the required station (no more messing around with screwdrivers in the back of the case), a user friendly menu driven program, easy to follow instructions and a 12 month warranty. Add to this the free downloadable telesoftware and we are sure that you will agree that we are offering you one of the best bargains on the market today.

For technical details please ring Morley Electronics on Tyneside (091) 262 7507

FEATURES

● Advanced design uses the latest technology will handle ANY future enhancements to the Teletext system eg: full field: 8 bit data transfer: 2k pages etc.

- Simply plugs into the Plus 1 interface.
- Low power consumption, less than 200ma. Optional power supply available.
- User friendly menu driven software including extended OSCLI and Osvord commands for access from BASIC programs.
- No user-RAM required (PAGE remains at default value).
- FREE Telesoftware, no access charges. (at present updated weekly.)
- Save selected pages to disc/tape for later retrieval.
- Full access to all Teletext services and channels eg: CEEFAX, ORACLE, 4-TEL.
- Gives you a real-time clock at your disposal (*TIME).
- Free software upgrades to allow for any enhancements to the teletext service. Eg: extra channels, full field data on cable & satellite systems etc.
- Easy to follow comprehensive user guide.
- No hardware limitations, it can for example receive virtually unlimited numbers of channels.
- Works with Solidisc SWR.

● Utils disc available including printer drivers allows pages to be selected and dumped direct to a printer (no more TV or Radio Times to buy).
ELECTRON TELETEXT ADAPTER
Electron adapter now available, including emulated Mode 7 allowing you to run long Adventure type programs. Please ring for details.

Now available the first true MEGA capacity RAMdisc for the BBC or MASTER computers.

This fully compatible unit, currently available in either 1 or 2 megabyte versions comes complete with operating software on ROM, power supply, battery backup and a comprehensive user guide, add to this our usual 12 months no quibble guarantee and we're sure you'll agree Morley have done it again.

FEATURES

1 Megabyte of RAM connected to the 1 MHz bus. Used with the supplied ROM software programs and files may be saved and loaded from the RAMdisc in the same manner as from a floppy disc with a large increase in speed, for example, a 20K mode 0 screen takes about 3-4 seconds to load from disc and about 0.2-0.3 seconds to load from the RAMdisc.

The RAMdisc ROM operates as a utility ROM working with the current filing system rather than as a separate filing system. Therefore ensures compatibility with any DFS.

The RAMdisc can be selected by a * command to take the place of any drive number from 0 to 9. If the RAMdisc replaces a floppy drive as 0 for example, all commands addressed to drive 0 will be intercepted by the RAMdisc. The default drive no. is 4.

'Dangerous' * commands such as *COMPACT, *COPY, *BACKUP etc are intercepted and the BBC's RAM from page 2 to &7FFF is saved to RAMdisc workspace, and may be recovered using a * command. This prevents accidental corruption of any programs/data in RAM you may have been using at the time. The save operation delays the * command by just under 0.4 seconds. The BBC's RAM can also be saved by an interrupt-driven routine which can be enabled by a * command.

The 'filing system wedge' ROM supplied supports load/save, byte file access, all relevant OSFSC commands, and contains a formatter, verifier and 'sector' editor for use with the RAMdisc.

Catalogue structure allows up to 2,709 files.

APPLICATIONS

Programs and ROMs can be written to take advantage of directly accessing a single RAMdisc, allowing the possibility of spreadsheets with more than 512 x 512 cells, million-character documents with immediate access and editing of any section, manipulation of 2 floating-point arrays each with 228 x 228 elements, a fast-access database with 10,000 100-character records, or even just a large printer buffer!

Accessible through the user's software for direct storage of eg: basic procedures, variables, large arrays etc which can be downloaded into the BBC's RAM or read directly. (We are hoping to be able to supply an extended basic ROM late this year, to allow 'transparent access' to the Ramdisc, which will effectively expand the BBC's RAM to about 1020k.)

OPTIONAL SIDWAYS RAM UTILITY (suitable for use with any 16k SWR)

Sidways ROM images can be saved to the RAMdisc under a special directory which, when enabled, will be used when an unrecognised * command is trapped for the ROM to load sideways ROMs from disc into sideways RAM. The * command will then be

passed to the new ROM image and if still unrecognised the next ROM will be loaded. If no ROM loaded from the RAMdisc intercepts the * command it will be passed to the current filing system as usual. ROMs on RAMdisc can be individually disabled in the same manner as 'real' ROMs in the BBC itself. Up to 104 8k ROMs can be saved onto the standard 1Mb RAMdisc, and the total load time (excluding time taken by the ROMs to process the command) for 100 ROMs is just under 9 seconds. All relevant control software for disabling/enabling ROMs etc. is provided. (Supplied on ROM.)

EPROM PROGRAMMER now available programs 8, 16 and 32k EPROMS connects to the user port software available on rom or disc.

Version 1 economy uncased with standard DIL socket.

Version 2 deluxe cased with ZIF socket.

DESFAX 7 - Now you can run your own TELETEXT service! Incorporates the powerful editing facilities of DESIGN 7, again with Teletext adapter interfacing.

Stores up to 100 of your screen designs on a 40tk disc or 200 on an 80Tk. Page selection by 3-digit number HOLD, REVEAL, page linking, individual page delays etc.

PLUS - a powerful CAROUSEL facility permits continuous slide-shows. Only one disc access for every 16 screens - reduces wear on drives. Smooth animation, variable speed text printing, built in printer dumps. Sample data disc and 22 page manual included.

Beats all other systems for ease of use and versatility.

M/B software DESIGN 7

Easily the best value Mode 7 screen designer on the market today. Design any mode 7 screen, from simple MENU pages to full CEEFAX standard. This program is an invaluable aid. Designs can be saved to disc as automatically numbered files or the program will convert the screen into a Basic Proc.

INTERFACES DIRECTLY WITH ADAPTER allowing CEEFAX-ORACLE pages to be selected and dropped into editor screen for alteration, saving, or conversion to BASIC. Allows channel change from within program.

To order please fill in and send order form to: **MORLEY ELECTRONICS, Unit 3, Maurice Road Industrial Estate, Wallsend, Tyne and Wear NE28 6BY.**

TOGETHER FOR THE FIRST TIME

20 MB WINCHESTER 10 MB TAPE STREAMER 1 MB FLOPPY DRIVE

The Nucleus 20 from UFD

Well they say two's company and three's a crowd, but not with the new Nucleus 20 from UFD.

The Nucleus 20 is the only BBC compatible mass storage unit featuring an in-built 20 MB Winchester, a 10 MB Tape Streamer for back-up security, and an 1 MB 5¼ DS Disk Drive with 40/80 track using ADFS to offload data onto hard disk.

All neatly packaged in one unit, your BBC sits underneath, with your monitor on top. The unit has its own power supply so you can plug it straight into the mains, and comes complete with all necessary connections.

All these features cost a lot less than you think, and they're backed by a 2 year Gold Standard Warranty. Ask your dealer for details, or telephone Akhter on (0279) 443521.

Welcome

An Akhter
Group Company

Colourful card

Another colour card for the BBC micro has arrived, this time from Focus Electronics. It uses the standard BBC colours but allows you to define the colour palette for each line of the display.

In a two colour mode, for example, each scan line can have only two colours, but these can be different from the previous line, and the next can be different again. So you have access to all the Beeb's colours in mode 0.

Programming the card is easy as it uses an extension of the VDU23 command. And the operating software has been written legally so it should work with other software, such as the Graphics Extension ROM. Its presence is practically transparent to the machine, and output is through the normal video ports.

The card is installed by removing the video ULA chip, plugging the card into the empty socket and plugging the ULA into the card. The product is intended for BBC B owners - Focus cannot guarantee that it will work on a Master.

The price is £65 plus postage, and details are available from Focus Electronics, 26 Hamwick Green, Lordswood, Chatham, Kent ME5 8TW.

Robotic Lego

Lego has moved into the micro market with a new series of robotics kits, pictured left.

Designed for schools, the kits will be sold through specialist dealers. They are based on the technical Lego system which includes gears, motors, pulleys and other mechanical components as well as the usual bricks.

The software is called *Lego Lines*, and is designed to provide a painless introduction to setting data lines. The eight lines of the user port can be set and monitored and their status is displayed on the screen as coloured squares. The interface is a simple switching device providing six output and two input lines. The status of all eight lines is displayed by LEDs on the unit.

A typical outfit for three pupils, including software, interface, teacher's guide and student materials, as well as a load of bricks, is expected to sell for around £200. For more details contact Lego UK Ltd, Ruthin Road, Wrexham, Clwyd LL13 7TQ. Tel: (0978) 266949

Beebs create jobs

A pioneering project with BBC micros is putting severely handicapped people back to work.

It started three years ago at Stoke Mandeville and Oldstock hospitals, and boosted the number of patients finding jobs tenfold.

Dr Julia Schofield, herself blind, started the project by suspending BBC micros on special cradles above patients who were confined to bed in traction. The patients had severe spinal injuries and the first thing they did was to read about their condition from text files created with Microtext.

Games and wordprocessors

were added with tutorial discs. From playing games and writing letters, patients soon gained computing skills to earn them jobs.

Now 40 patients are back at work. The success stories include the former helicopter pilot who is now running a publicity company, and the one-time building apprentice who provides an estimating service for builders and plumbers.

Dr Schofield has expanded the scheme to four other hospitals in Britain and is also working in Australia, Canada and the far East.

Julia Schofield, 16 King St, Richmond, Surrey TW9 1ND.

POST A PROBLEM

AS a result of pressure from readers, *Acorn User* now guarantees a fast reply service for enquiries. Your answer will be returned within 10 working days for just £2 (includes VAT), or your money back.

The idea is simple. Just write out your problem, fill in the coupon (right), and send both off to *Acorn User* with a stamped addressed envelope and cheque or postal order for £2. (If you want recorded delivery, add the cost of this on. The same goes for overseas readers.) Include as much detail as possible and a disc or cassette if a program is involved - with enough space to record any corrected listing.

We will then answer the problem and return all material received - within a guaranteed 10 working days from receipt. If we fail to match this promise your cheque or postal order will be returned with the answered question. If we cannot answer the problem, the cheque will be sent back to you.

If you want advice on hardware or software, or a list of addresses, send us your problems.

Announcing a Great New Deal for all Primary and Secondary Schools

INTRODUCING

**SUBSTANTIAL REDUCTIONS
ON ALL PLOTTERS**

Plotmate is recognised by many educationalists as one of the most sophisticated and practical plotters available at its price.

Now Primary and Secondary schools throughout the UK can reap the many benefits obtained by using PLOTMATE as an aid to computer based teaching at a cost which is lower than ever before.

This tremendous offer comes about as a result of the unique LINEAR GRAPHICS' EDUCATION SUPPORT SCHEME (ESS).

ESS has been devised and launched by Linear Graphics in order to provide the educational environment with the best possible value for money when purchasing this highly versatile extension to their computer graphics systems.

Under the ESS the following features become available:

- * **SAVINGS** of up to 30% on normal prices.
- * **FREE** training available.
- * **SUBSTANTIAL** discounts on all Linear Graphics Software packages.
- * **FULL** support and service from the manufacturer.
- * **TWELVE** months warranty.

COMPARE THESE PRICES!

PLOTMATE A4	£224 a saving of 25%
PLOTMATE A4M	£299 a saving of 25%
PLOTMATE A3 (with free Cadlink Disk and Plotmate ROM)	£299 a saving of 30%
PLOTMATE A3M	£426 a saving of 25%
SCANNER	£120 a saving of 20%
UPGRADE KIT A3 TO A3M	£150

PLUS save 20%-25% on all plotting accessories.

All prices are ex VAT.

PLOTMATE

LINEAR GRAPHICS LTD

28 Purdeys Way Rochford Essex SS4 1NE

'Phase out Basic in schools'

by Bill Penfold

Classroom computers should stop using Basic according to a report commissioned by the Government, which says it is time micro education moved on to more powerful languages.

The advice has come from the Advisory Council for Applied Research and Development - ACARD - which has completed a detailed and highly critical analysis of the future of the British software industry.

Most of the report concentrates on the bleak prospects of the small and diverse British industry in competition with the increasing might of the American giants and other foreign rivals. But ACARD also produced a handful of recommendations for micro education.

For starters, the 12-strong team

of experts called on schools to teach touch typing and 'mouse' skills as basics. It also recommended more teaching of mathematics relevant to understanding Information Technology.

It suggested that Computer Studies for pupils under 16 should be based on sound problem analysis and structured program development. But the experts made it clear they want to see an end of Basic, including the Beeb's.

'The teaching of Basic should be phased out as more powerful systems become available,' they maintained.

The ACARD working party included representatives of software houses, INMOS, the Alvey Programme, British Aerospace and Oxford University's programming research group.

Its overall conclusion on the prospects for the future of the British software industry was one of gloom. 'Foreign companies and multinationals will dominate the world and UK markets in the 1990s,' the report predicts. 'The UK market alone is too small to sustain a world class software industry.'

To survive, the experts have advocated much more training in computing skills, from the boardroom to the shop floor.

Part of that training is clearly seen as starting in the classroom. As a start, it proposes the construction of a common core syllabus for Computer Science at A-level. This should include 'a good groundwork in the mathematical aspects of software engineering, as well as its practical application'.

Play games with your mouse

Advanced Memory Systems, the company that produced the AMX mouse, has taken a break from business and graphics and has launched games designed to work with its popular rodent.

AMX Mind Games is a collection of five puzzles and brainteasers. It includes a sliding block puzzle, memory and code-breaking games (see screen dump above). In contrast, *AMX Zap Zone* is straightforward arcade action, but with all movements controlled via the mouse.

More details on these products are available from AMS, 166-170 Wilderspool Causeway, Warrington WA4 6QA. Tel: (0925) 413501/2/3.

DIY 3in drives

Some new and very inexpensive disc drives have been announced by Matmos. But you will have to have a certain amount of interest in DIY to make use of them.

The drives are 3in, 40-track models, giving an unformatted capacity of 250k per side. A single sided drive costs £29.95 and double sided is £39.95, plus a data lead at £10.

However, the drives are uncased and come without a power supply, although cases can be supplied and the company will advise on suitable power units.

Until now, 3in discs have been hard to get hold of but rumour has it that large stocks are on the way. The main problem will be a lack of commercial software in this format, but that may not bother home programmers.

Details on the drives are available from Matmos Ltd, 1 Church Street, Cuckfield, West Sussex RH11 5JZ. Tel: (0444) 414484.

Download hi-res graphics

High resolution graphics screens can now be downloaded from Prestel. The Mouselink section of Tubelink, which is found on the Viewfax database, is providing pictures created with packages like *AMX Super Art* and *Pagemaker*, which you can download to disc for later viewing.

The software that has made this possible is a machine-code compaction routine developed here at *Acorn User*. This means that only 1-2k of data is transmitted, rather than 20k. A decompaction program is available for downloading, along with the picture files.

Users are also encouraged to submit their own works of art. The screen files should be on disc, and sent to Mouselink Pics, PO Box 641, London NW9 8TF. Mouselink can be found on Prestel on page 2582182.

Graphics screens via Tubelink

Computers and health

A conference covering the use of computers in healthcare education and training is being held at Keele University in September. CBT '86 is the first conference of its kind and aims to cover subjects ranging from management techniques to the use of interactive video.

The conference will look at techniques such as computer managed learning, expert systems and artificial intelligence, and communications and information sys-

tems. Delegates are expected to include health service managers and senior teachers from the caring and remedial professions (nurses, occupational therapists and the like).

The conference runs from 22 to 24 September and a total of 280 places are available. Further details can be obtained from Stephen Ward, 164 Windsor Road, Ashton-in-Makerfield, Wigan WN4 9ES. Tel: (0942) 712385.

New SRAM group

A user group for Solidisk owners has sprung up in Scotland. Calling itself Solinet, the group aims to circulate a monthly newsletter on disc containing articles, hints and tips on sideways RAM.

Membership is free, although members are asked to submit their own discs in order to keep costs down. For more information contact Andrew James, 6 Torrinch Drive, Balloch, Dumbartonshire GB3 8JL.

INTER-WORD

INTER-WORD is the third in the ROM-LINK series of application programs for the BBC Micro-computer and this is the most ambitious suite of programs to be written for this machine. Each part of the suite offers a superior alternative to the competition. As a complete integrated suite of programs there is nothing better available for any micro computer.

INTER-WORD is the newest and the most comprehensive word processor ever produced for the BBC Micro.

- Part of the only truly integrated suite of programs for the BBC micro. This enables **INTER-WORD** to run alongside the other members of the ROM-LINK family such as **INTER-SHEET**. Multiple documents (together with sheet data etc.) can be held in memory at the same time and data transferred from one to another.

- Truly WYSIWYG. i.e **INTER-WORD** shows an accurate screen representation of the final printed page at all times.

- Supplied on a special 32K ROM, the chip is compatible with all machines.

- Supports 40,53,80 and 106 column screen modes with either 25 or 32 lines on screen.

- Compatible with BBC B, B+, Master, Aries, Watford and now Solidisk shadow RAM boards.

- Multiple column printout and multiple copy options.

- Mail merging facilities built in. Allows merging from another **INTER-WORD** document or from other **INTER** programs such as **INTER-BASE**.

THE NEW WORDPROCESSOR FOR THE BBC MICRO

The ROM-LINK suite, of which **INTER-WORD** is an important part, is a uniquely flexible set of integrated ROMs, compatible with all models of the BBC micro.

The first published review of **INTER-WORD** says:

"the most significant program since **WORDWISE**"

"**INTER-WORD** on the BBC Micro compares favourably with word processors costing five or ten times as much running on the IBM PC and the like."

"**INTER-WORD** was a real pleasure...a truly worthy successor to **WORDWISE**"

Gordon Taylor A&B Computing

- Built in support for different printers. There is no need for additional printer drivers, as the user can define the codes required for bold, underline etc. Once defined for a particular printer these codes can be saved for later use. Like **WORDWISE**, **INTER-WORD** also has the ability to send any control codes to the printer at any point in the line, thereby giving access to all its features.

- Powerful search and replace facilities include wildcards, and a case sensitivity control. There is also a quick 'go to' search option.

- Special attention has been paid to screen update speed, ensuring this is one of the fastest screen editors around. There is no waiting around for the text to reformat.

- If the page size is changed, or the margins are altered, all text is re-formatted to the new settings instantly.

- Any specified part of text, page or range of pages may be printed (or spooled to disc) via simple to select menu options.

- Fully compatible with DFS, ADFS, ECONET and any other Acorn compatible filing systems.

The format of text in **INTER-WORD** is controlled by rulers rather than embedded commands. A ruler can be inserted at any point simply by pressing a single function key. This ruler will affect the format of all text after it. By simply dragging the margin or tab indicators on the ruler all text controlled by this ruler is instantly re-formatted to the new settings.

INTER-WORD supports documents much larger than memory. This special 'multi-file' mode is both simple to use and far superior to other forms of continuous processing. By linking a list of files together **INTER-WORD** is able to treat these as if they were just one long piece of text.

The multi-file menu allows the insertion and deletion of any file and the printing of the whole document.

A special file selector is used whenever a filename is requested. Instead of having to remember and type the required filename, **INTER-WORD** will display a list of all the filenames. The user simply has to move the highlight to the required one and press RETURN.

When text is saved, all the current options are saved with it, including cursor position, screen mode and colours, current page layout etc.

Computer Concepts have been producing top quality software for the BBC machine since its launch. We designed and produced **WORDWISE** the most successful program ever produced for this machine. It is with this background that we can guarantee **INTER-WORD** is the best word processor for the BBC Micro. If you do not agree then just return it for a full, no quibble, refund. £49.00 + VAT (£56.35 incl)

S P I D E R 2
 REAL-TIME CONTROL FOR THE BBC MICRO

Watch the SPIDER!

- Powerful new BASIC commands for invoking PROCs from the User Port, Serial Port or the Keyboard.
- 8 independent countdown timers.
- Easy to install with no soldering.
- Comprehensive manual supplied.

New SPIDER 2 features

- Special keywords for controlling the Serial Port.
- Professional implementation of Foreground/Background processing.
- Reaction timing and pulse trains accurate to 0.1 milliseconds!

SPIDER 2 is a RAM/ROM combination which uses none of the BBC's memory, so BASIC programs are unaffected. The BBC B+ is fully supported and we supply a complete range of digital, analogue and serial interfaces for use with SPIDER using the 1MHz bus. Ask now for details.

SCRATCHPAD

BBC

The ideas organiser
for creative writers

Organise your thoughts and make the ideas flow

- * A suite of programs based on scientific knowledge about our thought processes
 - * Written by an established author
 - * Icon driven
 - * Fully tube compatible
 - * Spool to your word processor files
 - * Completely user-friendly
 - * Single or double disk drives
- SCRATCHPAD makes writing so much easier - all you have to do is add the words. "Certainly a clever idea . . . beats my sheets of A4" (Mirco User, Jan '86). "Well organised utility . . . valuable to writers . . . very useful indeed" (Acorn User, June '86)

MASTERCOPY

. . . the selective copier you need for the BBC MASTER computer . . .
Dramatically reduces the time taken to copy unprotected discs.

DFS to ADFS, ADFS to DFS, DFS to DFS, ADFS to ADFS
using one or two, single- or double-sided drives.

An 84K RAM buffer enables many files to be copied in one pass with the minimum of disc swapping, and directories are created automatically as required. Files of any length are handled.

Supplied on disc, MASTERCOPY runs from sideways RAM and is invoked with a * command. The program re-installs itself in sideways RAM when copying is done, ready for later use.

The ROM image supplied can be used to blow your own EPROM too, for use in the MASTER's cartridge slots.

Typical time to copy all 31 files DFS to ADFS is under 2 minutes!

£12.95 on disc - £14.95 for ROM version (including postage etc.)

For the Model B and Master:

DESIGN 7 - the best Mode 7 designer on the market. Design any screen quickly and easily, from simple menus up to full viewdata-standard screens. Saves screens as automatically-numbered files (for screen dumps etc.), or will convert them to BASIC for use in your own programs. Hundreds in use. Only £8.95 incl. p&p.

DESFAX - a teletext emulator - now you can run your own videotex system with pages you design yourself. Up to 200 pages stored on an 80 track disc, or 100 on a 40 track. Incorporates a powerful carousel facility with animation effects. Built-in graphics dump. Beats all of the other 'FAX' systems for ease of use and versatility. Supplied on 2 discs. £24.00 incl. p&p

Please indicate whether 40 or 80 track discs are required.

ECONET versions of DESIGN 7 and DESFAX are available.

£ 40.00 Cash Allowance for your old ROM Expansion Board when you trade in for the Fourmeg 256K or £10.00 reduction if you already have Solidisk DFS

The memory limit on the BBC Micro can now definitely be a thing of the past. The new Solidisk Fourmeg 256 board offers all you could wish for.

It has 256K of extra RAM, a superfast 4MHz CMOS processor, sophisticated memory management, sockets for high capacity ROMs and 48K of software in ROM.

In fact, it contains even more devices than the BBC itself. It is compatible with most hardware add-ons — except Sideways ROM expansion, which explains why this special offer.

Fitting it is easy. You remove the existing processor from its socket and plug the new board in its place, push on three colour-coded wires, clip on two mini-hooks and it's ready. Switch on the computer and you will immediately see the difference.

The message "Solidisk 256K expansion (4MHz)" announces the new memory size and speed.

A switch at the back lets you select between the old (2MHz) and the new (4MHz) speed.

The BBC Micro at 4MHz easily surpasses the new MASTER 128K on benchmarks.

For example, it runs the benchmark using Basic 4 in only half the time taken on the MASTER 128K.

If you have too many ROMs to plug in at once, the Fourmeg 256 offers TWO ways out. First, it includes additional high capacity (and fast) ROM sockets. Moreover, two or four normal ROM images can be stored in one high capacity ROM chip (by "Vertical Paging") — so more can be made immediately available at your fingertips.

Secondly, ROM images can be stored on discs and loaded into any one of the eight Sideways RAM banks available. If you need more room in "languages" such as VIEW or BASIC, you may use any of the eight SHADOW RAM banks. No user memory is then lost to the screen, whatever the screen mode (while machine coded programs can access RAM right up to &FC00!).

Two frequent uses of the extra memory are as a RAMDISK or a printer buffer.

Star commands in the ROM can turn the extra RAM into a silicon DISK of 200K, compatible with both the Solidisk DFS and ADFS formats. The RAMDISK is at least 10 times faster than physical disc drives as it has no moving parts.

The printer buffer saves you time, it lets you use the computer while feeding your printer in the background.

In addition, the MANAGER ROM offers over 30 star command utilities to save time and effort using the computer.

To complement such a powerful product, Solidisk has arranged with Computer Concepts to bundle the famous WORDWISE PLUS wordprocessor ROM and manuals. This excellent product, worth £45.00 on its own, became the best selling wordprocessor for the BBC computer last year. All in all, the Solidisk Fourmeg 256 offers an unmatched combination of speed, power and built-in facilities, while still having room for even further expansion. It is the most logical next step for the owners of any Sideways ROM board or of Solidisk Sideways RAM, who can trade in their present boards for the excellent Fourmeg 256.

Yes! I want to take you up on your special summer offer

"I will pay only: (delete if not applicable)

£135.00 instead of the normal price (175), I will send you my old ROM board when I have been satisfied with your Fourmeg 256.

£165.00 instead of the normal price, I already have your DFS installed in my BBC.

I also allow £3.00 for First Class Post.

If for any reason I am not entirely satisfied with your product, I will return it before 15 days and have all my money back (except postage if applicable)".

"THE PICK OF THE BUNCH" 16K SIDeways RAM

- * Module uses low power CMOS RAM
- * Internal decoupling capacitor for ultra-reliable data storage
- * Write protect switch now supplied for trouble free operation
- * Software provides full ROM load/save facilities
- * Formats programs for the ROM Filing System
- * RAM can be configured as a 15.5K printer buffer
- * Excellent documentation
- * A machine code patch allows Assembly language programmers to use the 65C02 instructions

Price : 16K RAM £24.85
Please specify 40 or 80 track disc when ordering. Educational discount given.

As an independent review put it . . .

"IFEL's manual is a pleasure to use . . . a massive 20 page booklet that goes into memory addressing, the sideways ROM system, as well as describe the software itself."

"The model with the most features at a reasonable price, and therefore the pick of the bunch, has to be IFEL's."

Beebug May 1986

create programs
 ten times...

faster

"System Delta is an exciting development in Database software for the BBC micro. It provides the kind of incentive to program your own applications which dBaseII did when it first appeared for the CP/M systems." (Personal Computer World)

Imagine, 150 commands instantly at your disposal to enable you to create and write programs in a fraction of the time it would normally take, and they can be fully RELATIONAL with up to FIVE FILES open at any one time. Well, it's a reality!

System Delta is the first programmable Database Management System written for the BBC. Written in machine-code as an extension to the BBC BASIC it provides for file handling, finding records, screen design, data handling and even menu selectors. You will be amazed at its power and flexibility—even graphics may be produced from files holding thousands of records. System Delta allows you to write professional WYNIWYG (what you NEED is what you get) programs.

"...a whole new world of specialisation looms on the horizon" Prestel
 "It's no longer on the horizon—look here and see our first release of applications!" Minerva Systems

REFERENCE GUIDE
 To take full advantage of System Delta this Reference Guide contains full details of all commands, example usage, technical points as well as the overall concepts of the system. Fully explained Job Costing example.
 "Although the manual is highly detailed because of the nature of Delta it is quite precise and very straight forward." (Tublink)
 £19.95

VIDEO RENTAL
 Simultaneously handles over 8000 videos & 5000 customers (using ADFS). Produces receipts including Fines for overdue returns, membership fees, extended bookings, etc. Daily takings, Top Ten, Fast search, Extensive reports & analysis by revenue, certificate, last hire, overdue, Price Lists. Generate letters to categories of customers.
 £54.95

ORDER PROC/INVOICING
 Cash & Credit customers with archives for details. Definable Invoice layout. Free or Fixed format. 6 VAT codes with analysis. Discounts by %, £ or a structure depending on customer type and products purchased. Pre-invoiced orders editable. Orders/Invoices may be batch printed. Updates Sales Ledger, if linked.
 £45.95

PRINTERS ANGEL
 Define your own character fonts for popular NLQ printers. Fast machine-code screen handling. Banner mode for designing multiple character definitions. Slant/unslant for easy italics. Create parts of fonts for merging character sets. Definable 'fig of 8' grid for design consistency. 5 popular typesstyles provided.
 £27.95

ALL APPLICATIONS
 NEED THE SYSTEM DELTA ROM £64.95

HOTELIER
 80 rooms with full descriptions for matching to guests' requirements. 4000 advanced bookings including full guest details. Archive facility for mailshots to past guests. Bills produced for guests. Standard letters for booking confirmations, etc. Arrival/Departure sheets produced.
 £59.95

ESTATE AGENT
 Retains Client & Property details for that perfect match. Secondary scan to detect 'near matches'. Remembers which details were sent to which client so reducing overheads. Scans for properties or clients not recently referenced to allow special attention. Financial enquiry for mortgage estimates, etc. according to financial status.
 t.b.a.

SALES LEDGER
 Full maintenance of transaction files for payments, adjustments, invoices and month and statements. Extensive reporting facilities include Daybook Reports, Analysis, Aged Debtor and monthly Control report. Access by name or number of Account. Updated by invoicing, if linked.
 £45.95

DATABASE FREE

Written using System Delta this simple to use, powerful database has total flexibility as well as speed. It can find any unique record in typically 3 seconds! It can handle 8160 cards, 255 fields, 200 characters per field. Records may be printed in any format and searches may be performed to multiple criteria, and placed in one of the 8 subsets available. Extensive maths calculations may be carried out. Sort. Card copier for easy transfer between files. This is what the press say...
 "This database ranks with the best providing every facility ever likely to be needed. Most other software houses would be advertising it as the all singing all dancing database." (Micro User)
 "Exceptionally simple. I have little doubt that the time taken to design the application will be less than virtually any other database I know. In short the person who finds this package a little a problem should not be using the BBC micro." (Micro User)
 "Anyone looking for a good, easy to use database should look hard at Minerva's Card Index Application as it is a fast and versatile program in its own right. Many people will buy System Delta for the Card Index alone." (Personal Computer World)
 "I must unreservedly recommend this product." (Micro User)
 "The great innovation with Delta is its flexibility unlike dedicated databases it allows practically unlimited scope for modification." (Tublink)

This Database is supplied FREE when purchasing System Delta.

SCHOOL ADMINISTRATOR
 Pupil records handled quickly and efficiently. Breakdown/analysis for class lists. Examination Lists including National Examination entry forms for GCE, CSE, etc. (upwards compatible for the new GCSE). Includes class transfer utility to move pupils at the year end.
 On applic.

MAILSHOT
 Use with data from any System Delta application for Address labels, Video labels, etc. Design layouts or use one provided. Up to 4 across, selectable spacing, margins, blank line removal, printer control codes. Word processor link with Wordwise and View for personalised letters. Output entire file, range or group. Calculations. WW+ segment.
 £19.95

Compatible with just about everything including: BBC Master, ADFS, Watford, Midwich, Challenger 3, etc.

BBC/ELECTRON 'IMAGE' V.2

'IMAGE' was the ultimate tape back-up copier now, it's even better

You can be completely assured that this is the best and most able program of its type available. It can deal with:

- Locked programs
- Programs of any length
- 300t and 1200 BAUD
- Files
- ?'s (Ctrl codes) in Filename
- Multiple copies
- False or trick block info.
- Changing Filename†
- Continuous data stream†
- Locking and unlocking programs

It is VERY IMPORTANT INDEED purchasers take note that 'IMAGE' is for sale strictly for making BACK-UPS of your own software for your own use, for protecting your own programs, or as an aid to putting software on disk. Any person found using the program for illegal purposes runs the risk of being prosecuted.

To receive your copy of 'image', send a cheque or P.O. for the sum of
An Astounding £5.80 to:

LOW COST C.A.D.

ATTENTION ALL ELECTRONICS CIRCUIT DESIGNERS!!
"IBM PC (and compatibles), BBC MODEL B, B+ and MASTER, AMSTRAD CPC and SPECTRUM 48K"

ANALYSER I and II compute the A.C. FREQUENCY RESPONSE of linear (analogue) circuits. GAIN and PHASE, INPUT IMPEDANCE, OUTPUT IMPEDANCE, and GROUP DELAY (except Spectrum version) are calculated over any frequency range required. The programs are in use regularly for frequencies between 0.1Hz to 1.2GHz. The effects on performance of MODIFICATIONS to circuit and component values can be speedily evaluated. Circuits containing any combinations of RESISTORS, CAPACITORS, INDUCTORS, TRANSFORMERS, BIPOLAR AND FIELD EFFECT TRANSISTORS and OPERATIONAL AMPLIFIERS can be simulated - up to 60 nodes and 180 components (IBM version). Ideal for the analysis of ACTIVE and PASSIVE FILTER CIRCUITS, AUDIO AMPLIFIERS, LOUDSPEAKER CROSS-OVER NETWORKS, WIDE-BAND AMPLIFIERS, TUNED R.F. AMPLIFIERS, AERIAL MATCHING NETWORKS, TV I.F. and CHROMA FILTER CIRCUITS, LINEAR INTEGRATED CIRCUITS etc. STABILITY CRITERIA AND OSCILLATOR CIRCUITS can be evaluated by "breaking the loop". Tabular output on Analyser I. Full graphical output, increased circuit size and active component library facilities on Analyser II. Check out your new designs in minutes rather than days. "ANALYSER" can greatly reduce or even eliminate the need to breadboard new designs. Used by INDUSTRIAL, GOVERNMENT and UNIVERSITY R&D DEPARTMENTS worldwide. IDEAL FOR TRAINING COURSES. VERY EASY TO USE. Prices from £20-£195.

LOW COST COMPUTER DRAUGHTING ON THE BBC MODEL B, B+

DRAWER I enables quality drawings to be created, and modified, quickly, easily and with the minimum of hardware. All of the major program elements are written in machine code giving exceptional speed of operation.

FEATURES

Rubber Banding for drawing lines. Solid or Dotted line types. Circles, Arcs and partial or complete Ellipses. Vertical or Horizontal Text. Pan and Zoom. Merging of drawings and library symbols from disc. Up to 20,000 lines on a drawing. Snap to a user defined grid. Absolute or Relative cursor co-ordinates displayed on screen. Input from analogue joystick, mouse or trackball. Output to standard dot matrix printer. Prices from £45 - ex VAT. Minimum Hardware Required: BBC Model B. Single or Dual 5.25" Disc Drive - 40 or 80 track. TV or monitor. Games Joystick, Mouse or Trackball. Dot Matrix Printer (Epson 80 series or Epson compatible - BBC default mode).

Superdraft

2-D draughting on IBM PC/BBC/TORCH.

Superdraft is not a general drawing package - it has the technical features you need to produce engineering drawings for any discipline. Here are some of Superdraft's BBC/Torch facilities:

- Simple keyboard operation, or use optional digitiser.
- Full, dash, chain and arrowed lines/arcs.
- Drawings of 38 graphics and 26 text layers, all in mode O. Layers may be individually hidden, erased, stored and moved between drawings.
- Unrestricted zoom, scale, translate, rotate and reflect commands.
- Precision movement/measurement (six significant figures) in rectangular/polar co-ordinates or preset steps.
- Automatic 'snapping' to points, lines, arcs, symbols, intersections of line-line/line-arc/arc-arc.
- Automatic drawing of parallel, perpendicular and radial lines, and tangents between point-arc/arc-arc.
- Superb automatic dimensioning to ISO standards. This feature is superior to any on the BBC, and must be seen to be appreciated.
- Text at any angle and size.
- Automatic cross-hatching, any pitch and line type.
- Automatic arc blending (fillet arcs), with selectable radius, at intersections of line-line/line-arc/arc-arc.
- Predefined and user-defined symbol libraries. Symbols may be scaled and rotated or automatically fitted (even at an angle).
- Output to colour plotter with automatic scaling to paper size if required. Pen colours/thicknesses individually selectable.
- Calculation of area, perimeter, moments, centre of gravity and principal axes of a section.

Superdraft runs on BBC with Z80 second processor, and Torch computers. We can supply complete systems, including hard-disc and network.

Superdraft is in use now in industry, training and education. It can handle the technical drawings that other systems can't - try us!

IBM: Superdraft also runs on the IBM PC (and compatibles) with many more facilities making Superdraft a world leader in low-cost CAD.

Special discounts for education means lower than ever prices for training establishments, higher education and schools.

We believe a demonstration will convince you of Superdraft's abilities - ring us now to arrange one. Demonstration discs also available.

SECOND PROCESSORS

ACORN Z80 2nd Processor with 64K RAM, CP/M operating system. Comprehensive package of bundled business software. **£329 (a)**

ACORN 6502 2nd Processor with second 6502 and 64K RAM provides faster data processing speeds and larger user RAM. **£160 (b)**

TORCH ZEP 100 Z80 cpu with 64K RAM and TORCH's CP/M compatible MCP operating system. With FREE bundled software. Fits internally in the computer. **£229 (b)**

TORCH TZDP240 Torch ZEP100 with TECHNO-MATIC's dual drive with monitor stand PD800P. **£439 (a)**

MULTIFORM Z80 TECHNOMATICs multi format Z80 system. Details on page no?? includes free POCKET WORDSTAR. **£299 (b)**
MS/DOS Read/Write Utility **£49 (d)**

ACORN IEEE INTERFACE

Allows BBC computer to control any scientific and technical equipment that conforms to the IEEE488 standard. The interface can link upto 14 compatible devices. Typical applications are in experimental work in academic and industrial labs. **£269 (a)**

TELETEXT ADAPTOR

Converts your computer into a teletext receiver. **£125 (b)**

ROBOCOM BITSTICK

BITSTICK I **£299 (a)**

BITSTICK II **£775 (a)**

Upgrade for Bitstick I to II **£415 (a)**

Bitstick I Multiplotter Driver (includes most popular plotters) **£79 (c)**

Epson FX80 Dump for Bitstick I/II **£25 (d)**

PRINTERS

EPSON LX80 100 cps, Variety of fonts, quad density bit image graphics NLQ, Standard Centronics interface. **£195 (a)**

EPSON LX80 Tractor Feed **£20 (c)**

EPSON LX80 Sheet Feeder **£49 (c)**

EPSON LX86 As LX80 but 120cps and IBM compatible. **£229 (a)**

EPSON FX85 160cps, 80 col, 80K buffer, NLQ, IBM compatible graphics Variety of fonts, multiple density bit image mode. **£315 (a)**

EPSON FX105 As FX85 but with wide carriage for 136 col **£449 (a)**

EPSON FX80 **£260 (a)**

EPSON LQ800 See specification on page 5 **£459 (a)**

EPSON LQ1000 As LQ800 but wider carriage for 136 columns **£659 (a)**

TAXAN KP810 140 cps, 80 col, NLQ, 2K buffer, variety of fonts, quad density hi res bit image graphics, centronics interface standard **£219 (a)**

TAXAN KP910 As KP810 but with wide carriage for 156 col **£369 (a)**

BROTHER M1409 180 cps, 80 col, NLQ, IBM graphics/Epson FX compatible, friction/tractor std, variety of fonts, multiple density bit image graphics, dual interface. **£299 (a)**

BROTHER M1509 As M1409 but wider carriage for 136 col **£399 (a)**

EPSON JX80 colour printer **£420 (a)**

INTEGREX Multicolour Inkjet printer **£549 (a)**

CANON PJ1080A printer 4 Colours. **£409 (a)**

BROTHER HR15 Daisy wheel printer

14 cps, 3K buffer, proportional spacing, underline, bold, shadow print, super/sub script, two colour print, parallel interface. **£325 (a)**

JUKI 6100 Daisy wheel printer 15 cps, 2K buffer, switchable 10/12/15 cpi proportional spacing, underlining. Parallel interface. **£249 (a)**

PLOTTERS

See details on page 5.

EDWORD II	£43 (c)

SPREADSHEETS

VIEW SHEET Acorn's spreadsheet provides 255 cols and 255 rows and will operate in any mode. Fully compatible with VIEW and 6502 2nd processor.	£37 (d)
VIEWPLOT A disc based plotting program. (To be released soon).	£22 (d)
INTERSHEET The new spreadsheet from Computer Concepts with many advanced features like 105 col mode, holding several spreadsheets in memory at a time etc.	£39 (d)
INTERCHART Graphics package for Intersheet	£27 (d)
ULTRACALC BBC Publications very popular and well proven spreadsheet rom.	£49 (d)
QUICKCALC A disc based economically priced spreadsheet package (40 or 80T Disc).	£14.50(d)
MINI OFFICE II A suite of inexpensive but extensive word processor, database and spreadsheet packages. (40T or 80T)	£14.75(d)

LANGUAGES

META ASSEMBLER Multi processor Assembler full details on page 8	£145 (c)
ACORN 6502 DEVELOPMENT PACKAGE A macro assembler with utilities for developing large programs in assy lang. Requires 6502 2nd processor.	£43 (d)
MACROM A very fast full featured macro assembler rom from 6502 and 65C02 codes, allows use of macros from library disc. Assembly can be disc to memory, memory to memory, memory to disc and disc to disc thus allowing very long source code upto the length of disc in use. About 3 times as fast as ADE and 30% more economical in memory.	£33 (d)
ACORN MICRO PROLOG Logic programming language used extensively in the artificial intelligence field. A simple 'front end' is supplied to make syntax more friendly.	£62 (d)

ISO-PASCAL Acorn's full implementation of International Std Pascal on 2x16K roms.	£48 (c)
ISO PASCAL STAND ALONE GENERATOR	£30 (d)
OXFORD PASCAL A fast P-code compiler and stand alone utility (40 or 80T) Network version available	£36 (d)
BCPL	£46 (c)
BCPL CALCULATIONS Supports floating point, fixed point and fast integer calculations on BCPL	£17.50 (d)
BCPL STAND ALONE GENERATOR	£39 (d)

DISC DRIVES

TS 400

PD 800

P2041 HT

PD 800 P

TECHNOMATIC offers a wide range of high quality, high performance drives to meet all needs of BBC micro users at competitive prices.

*All drives are fitted with MITSUBISHI's slim line ultra low power mechanisms capable of single and double density operation and offering very fast track access and head settling times.

*5.25" floppy drives are fitted with 40/80 track switches as standard at no extra cost. The switches are located in the front and clearly marked to indicate the status at a glance.

*The mechanisms are set inside attractively styled, sturdy metal casings painted in BBC beige colour.

*The plinth version drives provide for a neat and compact system installation giving it a more professional look.

*All drives fitted with all necessary leads and are ready for operation on unpacking. The drives with the mains power supply are supplied with a mains lead fitted with suitably fused 13A moulded plug.

*Mass storage 20 Mbyte drives are available in the following versions:

- * P20HD Stand alone.
- * P204HP With a single floppy housed in a plinth version case.
- * P214TS Top of the range with a 10 Mbyte back up streamer and a single floppy housed in a plinth type casing and supplied with backup utilities.

All models are fully compatible with Acorn's ADFS system and include a mains psu and the necessary cable connections.

**ALL TECHNOMATIC DRIVES CARRY A TWO
YEAR WARRANTY AS STANDARD**

(Effective 01.08.86)

DISC DRIVE MULTIPLEXER

The cost-effective alternative to networking! A self-contained unit that enables up to four computers to be connected to one single or dual disc drive. No hardware modifications — simply plugs into the computers disc interface connectors. No ROMs or other software needed. All DFS commands work as normal. The switching of drives between computers is totally automatic and completely invisible to the user. This unit is ideal for installing in classrooms and other situations, where networking is not planned or necessary, or where costs must be kept low. In many cases software needs to be shared, although full networking complexity and cost is not needed. Several of these units can be connected in series to allow more computers to access the same discs, i.e. two quads connected together will allow 7 computers to share 1 drive. Units are supplied with 5' of cable per outlet as standard. Mains powered.

TDM4 Quad Unit (up to 4 computers)

TDM2 Dual Unit (2 computers)

ACW443 CAMBRIDGE WORKSTATION

- *A complete self-contained workstation.
- *'Bundled' software as 32016 co-processor.
- *8Mhz NS32016.
- *20Mbyte Winchester + 1 400K Floppy Drive.
- *4Mbyte RAM as standard.
- *Hi-Res Monitor *Detachable keyboard.
- *Phone for detailed leaflet.

PHONE FOR DETAILS OF RANGE OF 32BIT SOFTWARE NOW AVAILABLE

32016 CO-PROCESSOR

A second processor that brings genuine 'Mainframe' power to your BBC.

- * 6 Mhz. NS32016 CPU
- * NS32081 Floating Point Processor.
- * Bundled' languages including: Fortran-77, Pascal, C, Cambridge Lisp, 32016 Assembler, 32Bit BBC Basic.
- * 1Mbyte RAM fitted as standard.
- * Phone for detailed leaflet.

512 CO-PROCESSOR

Brings professional software to the BBC Master.

- * 10 Mhz 80186 *DOS PLUS.
- * GEM Write & GEM Draw.
- * 'WIMP' Environment with high quality Mouse.
- * Runs many 'IBM' programs — even 'Flight Simulator'!
- * Convert to/from IBM/BBC data.

DOTPRINT PLUS

A uniquely versatile NLQ ROM for the BBC Micro.

- * Built-in character font generator.
- * Built-in view printer driver.
- * Supports microspacing for professional justification in View & with disc in Wordwise/Plus.
- * True bold print as well as double width.
- * 12 character pitch as standard.
- * Fully variable pitch and line spacing.
- * Suitable for fully 'EPSON' compatible printers with quad-density graphics.
- * DOTPRINT PLUS for EPSON FX/RX and compatibles.
- * DOTPRINT DUAL for EPSON MX range.

MICROJUSTIFIED TEXT

EPSON LQ800

Uses top quality 24 pin dot-matrix technology.

- * Superb 'letter quality' at 67cps.
- * Fast clear draft quality at 200cps.
- * LQ/Draft modes selectable from front panel.
- * Variety of fonts, usable in both draft & LQ modes.
- * Optional 'personality' modules for Diablo and IBM emulation.
- * Optional Font modules.
- * Friction feed.
- * Hi Res bit image graphics with hex density.

NEW STAR NL10	£239 (a)
NEW PANASONIC KX-P1080	£169 (a)

GRAPHIC WORKSTATION

A Powerful A3 3 pen plotter with unique accessories.

- * Resolution of 0.1mm.
- * Opto-sensor allows digitising and scanning of pictures.
- * A robust drill/router attachment allows drilling of light materials.
- * Scriber allows fine-line drawing on coated materials.
- * Basic plotter/accessories as well as supporting software is also available separately.
- * Applications software available as an option allows interfacing of the drill/router with NOVACAD.

PLOTMATE

A4 LINEAR GRAPHICS 'PLOTMATE'

- *Intercepts BBC Video Calls for direct outputs.
- *Plugs into the BBC user-port.
- *Runs with most BBC software.
- *Supporting software available.

A4M/A3M LINEAR GRAPHICS 'PLOTMATE'

- *Standard computer interfaces — suits most computers.
- *Available in both A4 and A3 versions.
- *Supporting software available.

NOVACAD

Computer Aided Draughting for the BBC Micro

A sophisticated CAD package with unique facilities which are generally confined to the professional CAD packages costing thousands of pounds.

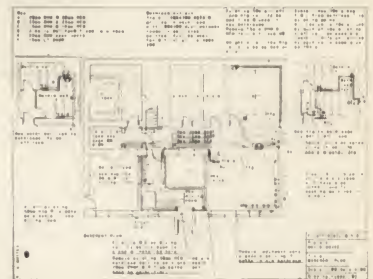

NOVACAD is being used in widely differing fields ranging from leading British industries for producing engineering drawings to Accountants' offices for producing flow charts. Architects,

engineers, plumbers, kitchen planners and many other professions requiring easy to use facilities for producing professional quality output are making extensive use of NOVACAD's unique features. NOVACAD is proving to be a invaluable teaching aid in technical schools and colleges simply because of the ease with which it can be used.

The major features of NOVACAD are:

- * Simple and easy to use with logical command sequence.
- * A large drawing area (approx 15 screens).
- * The ability to create complex icons (upto 500 lines instead of the usual 15 to 20 pixels), store them in a library and recall them at different scales and orientations.
- * A zoom facility allowing magnification of up to 20 times to insert finer details.
- * Block copy of shapes on the screen for repetitive use.
- * Text entry at any 90 orientation at any position on the screen.
- * Create multi layer drawing with 8 levels available.
- * Full compatibility with the BBC range with minimal hardware requirements yet having the capability of exploiting the potential of the extra shadow memory or the second processor's memory and speed.
- * Printer routine for Epson 80 and 136 column printers.
- * A unique facility to output to any BBC compatible plotter.

MINIMUM HARDWARE REQUIREMENTS

- Any BBC range computer with Acorn DFS.
- 40 Track single sided single drive.
- Epson compatible dot matrix printer.

With basic BBC B, NOVACAD operates in mode 4 allowing use of any 2 colours with shadow memory, it can also operate in mode 0 for higher resolution or mode 1 for allowing use of any 4 colours, and it will have additional user memory for more complex drawings. 6502 second processor will also increase the drawing speed.

NOVACAD is available in two versions

*BASIC version for cursor control from the keyboard.

*T/M version for cursor control from the keyboard, Tracker Ball or a Mouse.

OPTIONAL EXTRAS

Plotter driver generator is available as an optional extra to configure a plotter routine for any BBC compatible plotter. Pre-configured programs for the popular plotters like Epson HI 80, Hitachi 672, Plotmate, Penman and HP GL. This program allows the drawing to be scaled to the maximum plotter size thus enabling drawing of A2 and A3 sizes to be produced with equal ease. The zoom facility will enable inaccuracies of drawing on the screen to be eliminated.

ROUTCAD, an optional software package for our Graphics Workstation allows for production of shapes drawn using NOVACAD in 3D on suitable material and is ideal for a range of applications including template making and model building.

NOVACAD package includes a 16K ROM, Utility disc and a comprehensive manual.

MODEMS

MIRACLE WS4000

- * A cost effective intelligent modem that offers the best value for money bringing the world of data communication within easy reach.
- * Plain English commands make it simple to use, even for the first time user.
- * Latest Hayes-type protocol commands, auto dial, auto answer, auto speed seeking.
- * Equalisation model in V23 for line-noise filtering.
- * Many other options including upgrading to V22 and V22 bis.

MIRACLE WS2000

- * A comprehensive manually switched 'World Standard' modem.
- * Competitively priced with a capability to be upgraded for various options.
- * BT approved for V21/V23, 300/300, 1200/75 and 1200/1200 half duplex.
- * Includes BEL103/113/108 standards for use outside UK.

Optional extras include (Not BT approved).

- * SK1 chip set for computer control.
- * User port cable.
- * Auto dial Board.
- * Auto Answer Board.
- * DS1 disc for auto dial facilities on Commstar.

WS 3000 Range

MIRACLE WS3000 RANGE

- * A professional range of intelligent modems with full BABT approval.
- * Auto Answer and Auto Dial facilities installed as standard.
- * HAYES protocols implemented.
- * Pulse or DTMF 'tone' dialing.
- * Plain English command structure simplifies the use of the modem.
- * Integral parallel printer port fitted as standard configurable for both input and output for process control applications.
- * A line sharing facility to differential between data and voice calls.
- * Intelligent speed buffering converts 1200/1200 terminals to 1200/75
- * Equalisation mode for line noise filtering.
- * Internal battery back up for storing 63 names, numbers and default settings.
- * Upgrade path for 1200/1200 and 2400/2400 and security encryption.
- * Applications in the field of graphics and text access, high speed telex, user to user, and user to main frame.

SPECIFICATIONS

- WS4000 V2123: *CCITT V21/V23.
*300/300, 600 and 1200 half duplex, 1200/75.
- WS3000 V2123: *CCITT V21/V23/Bell 103.
300/300, 600 and 1200/75
- WS3000 V22: *As V2123 and also 1200/1200 full duplex.
- WS3000 V22 bis: *As V22 and also 2400/2400.

MULTIFORM Z80

A unique Z80 2nd Processor with a 'MULTI FORMAT' capability.

- * It is capable of running most CP/M 2.2 format applications programs on the BBC.
- * Connects to the BBC via 1MHz bus, no restriction on the cable length. OS/M operating system on rom.
- * Integral mains psu and 64K on board ram.
- * 28 different formats including Acorn Z80, RML 380Z & 480Z, EPSON QX, Amstrad, Osborne etc, supplied on the library disc with the utility to create additional formats.
- * Emulates the two of the most commonly used CP/M terminals, HAZELTINE 1500 and ADM-3a in addition to the Acorn VDU making installation of most of the software packages easy.
- * Utility to inter convert ASCII text wordprocessed on a standard BBC and under OS/M or CP/M.
- * Multiform is fully compatible with Acorn's 8271 and 1770 DFS on models B, B plus and the Master.
- * Single density dfs allows single density CP/M format use. Double density dfs allows both single and double density CP/M formats to be used.
- * Single or dual, single sided or double sided and 40 or 80 track drives can be used provided that they match the CP/M software format to be run.
- * Dual drive will allow two separate formats to operate simultaneously for data transfer making it ideal for use in environment where machines with different formats are in use.
- * Utility to read and write on IBM PC DOS discs available as an optional extra. Utility will also format a PC DOS disc.
- * Multiform Z80 is supplied with a OS/M operating system rom, System disc and a Library disc. Please specify the DFS type and the drive format when ordering.

EPROMER II

Eprom Programmer for the BBC Micro Series

Epromer is supplied with a integral mains psu, all the necessary cables, a manual and software on disc. Disc also contains the rom image for use with sideways ram. Rom based software is available as an optional extra if required. Epromer is fully compatible with Acorn DFS on the BBC B, B+ and the MASTER.

- * A sophisticated Eprom Programmer that uses the latest Eprom Programming technology to simplify the use of the programmer and at the same time allowing the programmer the full control of the programming process.
- * It handles the full range of popular single rail Eproms up to 28256, all except the 27256 are programmed in a single pass.
- * Powerful menu driven software makes the programming of eproms simple and efficient.
- * Selectable programming voltage 25/21/12.5V.
- * Two programming option, standard and algorithmic for eproms capable of high speed programming. 27128 can be programmed in just over 2 mins.
- * Single address to full eprom address selectable for any of the epromer function ie blank check/read/burn/verify.
- * Full screen editor with input in hex or ASCII.
- * Software interface for special programming requirements eg programming alternate bytes etc.
- * Many other useful utilities included.

Please send for full specification sheet.

META VERSION THREE

The only package available in the micro market that will assemble 27 different processors at the price offered.

Now Available

- * Assembly for even more processors
- * Now over 70k long on 2 16K Roms and 2 Discs
- * Dozens of new options, features and directives

The Original META system sold hundreds worldwide; it's being used in Universities, Polytechnics, British Telecom, the BBC, the MOD etc etc.

Now there's an even better version. It is supplied on two 16K roms and two discs and it is fully compatible with all BBC models including Master and gives you complete Editing and Assembly facilities for all the listed processors:

1802	6800	8085	6305
HD 64180	6802	Z8	6801
Z80	68HC11	68120	6803
6502 (including all CMOS variants)	68000	68121	6805
65C812	8048 Series	6808	6804
65C816	8051 Series	6301	6809
	8080	6303	

META uses the appropriate standard mnemonics for each, eg. LD (HL), 0ABH in Z80 and MOVE. B DO, \$50 (A5, D6.L) in 68000 etc.

Full nestable Macro facilities are provided, and nestable conditional Assembly, (IF/ELSE/ENDIF), Modular source code (including parameter passing). True local and global labels, 32 bit labels and arithmetic (incl. MUL, DIV, AND, OR, XOR, SHL etc). 30 ways to send object code during Assembly, including Intel Hex, S.Record, Binary etc to Disc files, RS423, EPROM emulators etc, local reassembly and over 50 directives, including DS.X, DC.X, EQUX, FCB etc).

Wordwise-style Editor integrated in with Assembler; Search/Search-Replace, Block copy/delete, markers etc; dozens of special features and functions for Assembly code programmer. Fast and Friendly to use.

Plus special new serial Communicator Area with Complex Option page etc.

Send for your detailed spec sheet on the META Assembler and the PORTAL EPROM Emulators. Set of disassemblers and Logic Analyser coming soon.

Please specify the computer type when ordering.

PORTAL EMULATOR

- * Provides real time emulation of all listed eproms at 150 ns.
- * Totally software driven by (META).
- * Compatible with 'piggyback' processors.
- * Upto 4 portals can be used on the same BBC lead.
- * Each PORTAL has a lead terminated with a 28 pin header to plug into the socket you need to emulate.
- * Various options available for sending code: eg use two PORTALS for 16 bit data bus with sequential PORTAL skipping.

PORTAL is available in two versions:

PORTAL 128 for 2716, 2732, 2764, 27128.

PORTAL 512 for all of the ones listed above + 27256 and 27512.

EDUCATIONAL SOFTWARE

We are pleased to announce that we now stock the full range of BBC Publications Educational software for the BBC computers. This software which is in many cases developed alongside radio and TV programs from the BBC Education Department, has all been tested in many schools, and by education experts to ensure the high quality one would normally expect from BBC. These packages supplement the class room learning by providing moving and colourful graphical displays which normally cannot be easily produced on the blackboard and help in ensuring clear understanding of a variety of subjects. The software has received wide acclaim from teachers, and in the educational press. All cassette programs transfer easily to disc, and all disc programs can be run on 40 or 80 track drives.

PRIMARY LEARNING

ASTRONOMY

Aimed at the 9-12 age group, programs include Phases of the Moon, Eclipses, Seasons of the Year, Planetary Motions and Lander which is a gravitationally accurate game. All programs feature colour graphics. **£11 (d)**

COMPUTERS AT WORK: THE WORK GAME

Uses the technique of computer synchronised audio to illuminate two of the most important applications of computers — robotics and information technology. Includes a complete database program, tutorial on word processing principles, and robot control program driven by a logo-type language. **EC £16 (c)**

DRAWSTICK

For children aged 8 upwards allowing them to create pictures, charts, maps and diagrams. It is sufficiently sophisticated for use by older children and adults. Pictures are saved in a compressed form, and can be incorporated in your own programs. Uses keyboard or joystick. **Cassette £8 (d)**

INTRODUCING GEOGRAPHY

Four exciting graphic adventure simulations to bring geography to life for the 9-13 age group. River involves navigating a river's course to the sea. In Flight, you fly an aircraft round the world. Summit takes you up Mount Everest, and Nomad involves survival in the desert. **£16 (d)**

MATHS WITH A STORY 1

Four primary-level maths programs for children of a wide range of abilities. Topics include symmetry, co-ordinates, and probability. **Cassette £8 (d)**

MATHS WITH A STORY 2

These further four maths programs are for the same age/ability range as pack 1, and cover similar topics, from different angles. **Cassette £8 (d)**

NUMBER GAMES

Six maths programs designed to please the eye and stimulate the mind of any active and adventurous child aged 8 upwards. **Cassette EC £7.50 (d)**

USING YOUR COMPUTER

A friendly and original introduction to computers using the computer synchronised audio technique. Written for a 8-12 year old but also suitable for any complete novice. Total of 80 minutes of audio material and 14 programs. **Cassette £24 (c)**

WORD PLAY

An elegant but simple program to introduce primary school age children to the concept of word processing. Search, delete, justify etc have small animal icons associated with them. Fun manual for small children. **Cassette £10 (d)**

WORD MOVER A simple text editor.

Cassette £8 (d)

SECONDARY LEARNING

ADVANCED LEVEL STUDIES: STATISTICS

Six programs covering the central concepts and principles of statistics. Topics covered are Discrete Data and Binomial Distribution, Continuous Data and the Normal Distribution, Hypothesis testing and confidence intervals, Central Limit theorem and Estimation, Simulations, Correlation and regression. **£23 (d)**

ADVANCED STUDIES: GEOGRAPHY

Four programs examining aspects of social geography — traffic and town planning, drainage basin management and planning for industry. Users can alter the models. Details in the comprehensive manual. **Cassette £10 (d)**

INSIDE INFORMATION

Designed to provide a basic introduction to information technology for young people and adults. The course assumes no prior knowledge of the subject and is suitable for use in secondary schools, further education colleges, ITeCs and adult education centre. This software can be used alone, or in conjunction with the BBC's Inside Information radio series. **Prog Cassette £10 (d), Audio Cassette £5 (d), Book £8 (d)**

OPEN LOGO

Developed by the Open University to provide a full implementation of Logo — the language of learning — for the BBC Micro. 2 x 16K ROMS and two detailed manuals (120pp and 300pp). **Cassette EC £55 (c)**

SCIENCE TOPICS: WAVES

A secondary level physics program allowing the student to learn about waves by displaying waveforms on screen. Parameters can be altered and the results observed immediately. **£14 (d)**

SCIENCE TOPICS: RELATIONSHIPS

A secondary level biology program giving a sophisticated simulation exercise for students, based on data from the World Health Organisation. You are malaria control officer for an African village, and you must use the right combination of drugs, pesticide and education to combat the disease. **£14 (d)**

SCIENCE TOPICS: BONDING

A secondary level chemistry program designed to reinforce and strengthen students' concept of the bonding of elements. Transfer and sharing of electrons are both shown graphically. **£14 (d)**

SCIENCE TOPICS: ELECTROMAGNETIC SPECTRUM

A secondary level graphical adventure designed to test your knowledge of the

electromagnetic spectrum. You are lost in space, and you must build a radio, perform spectroscopic analysis etc. to complete the adventure. **£14 (d)**

SCIENCE TOPICS: ELECTRONICS IN ACTION

A secondary level program about using computers for control. The pack gives three simulations of control systems. Control is achieved using a subset of 6502 assembly language. A program editor is supplied. **£14 (d)**

SCIENCE TOPICS: NEWTON AND THE SHUTTLE

This secondary level interactive program in three parts follows the space shuttle from launch to recapture of a satellite in space. Students knowledge of Newtonian mechanics is tested at each stage. **£19 (d)**

SCIENCE TOPICS: ECOLOGY

This program allows students to take the part of groups who manage a nature reserve according to their own special interests. The object is to keep all groups satisfied. **EC £19 (d)**

SCIENCE TOPICS: POLYMERS

Students run a manufacturing company and must make decisions as to the best materials to use for their products. They compete with a computer run rival company. Two areas of manufacturing are featured — car parts and kitchen equipment. **EC £19 (d)**

SECONDARY SCIENCE: MICROTECHNOLOGY

This software for the 14-16 age group will help students understand certain fundamental concepts in basic electronics. The pack contains Logic and Resistor Tutors, a Servo circuit simulation and a Circuit Design program. **Cassette £7**

SECONDARY SCIENCE: THE MOLE CONCEPT

A computer synchronised audio program which explains definitions of atomic and molecular masses and attractively depicts molar equations. The audio track is written and presented by Fred Harris. **EC £16 (c)**

SECONDARY SCIENCE: UNIFORMLY ACCELERATED MOTION

A physics program which illustrates basic equations, uniform acceleration under gravity and the idea of terminal velocity. The medium is computer synchronised audio. **EC £16 (c)**

VU-TYPE

The popular 'sight and sound' touch-typing tutor using colour graphics. The layout and parameters can be altered. 23 exercises can be loaded from disc. **EC £15 (d)**

GENERAL

GAME CORE

This software gives you all the information and intelligence routines you need to write simple and highly absorbing board games for your computer. **Cassette £9 (d)**

MONITOR

A professional tool for machine-code programmers, suitable for assembly language experts and beginners alike. It is also ideal for teaching assembly language. **EC £30 (d)**

TOOLBOX 2

25 programming aids for the BBC Model B. Book (essential) sold separately. Program includes machine code monitor, disassembler, fast flood fill, sprite generator/mover, and many more. **Manual £9.50 (d), Cassette £9 (d)**

ULTRACALC 2

An electronic spreadsheet program with all the necessary built-in features. Ideal for business and personal management. Graphics utility disc included free of charge. **£47 (d)**

VU-TYPE PROFESSIONAL

An enhanced and expanded version of Vu-type including many 63 Pitman-approved exercises. **£19 (d)**

WHITE KNIGHT Mk 12 Disc £16 (d);

BATTLEFIELDS £8.50 (d)

A VOUS LA FRANCE

A home study aid for any one learning French developed in conjunction with BBC TV program of the same name. **Program Cassettes (2) EC £12 (d)**

Book £5.25 (d)

DEUTSCH DIREKT

A disc based German vocabulary learning program with audio cassette to help with pronunciations. **Disc with audio Cassette EC £16 (d)**

Book £5.95 (d)

Disc **EC Network Compatible** Audio Cassette
Cassette based programs listed above can be supplied on disc at an extra charge of £1.50 per cassette, please specify the format required.

ELECTRON USER GROUP

Sir, I am starting a user group for Electron owners, and would be grateful if you could publish my full address so that potential members can contact me.

While based in Cheshire, I would welcome enquiries from anywhere, as the group will be postal. There are no fees, the idea being to encourage contact and help between members. It will probably produce a cheap but informative newsletter to which members will contribute.

Finally, could I ask that enquirers enclose a stamped addressed envelope for a reply. Thank you in anticipation.

Michael O'Donnell
5 Worthington Close
Runcorn, Cheshire WA7 2QG

KNOCKED SIDEWAYS

Sir, Add my opinion to those which say that too high a level of pre-knowledge is assumed by too many authors of articles and manuals.

The advertisement for a well known 32k shadow RAM board says: 'Use the top 20k of the expansion RAM as the screen display memory, leaving all the standard BBC RAM free for programs.'

That's clear enough, you say. Yes, but the manual is completely incomprehensible except to a person with a good working knowledge of the operating system of the Beeb. I can't understand for instance if the above refers to *any* program, or only user written ones.

The July issue of *AU* itself is at fault! The article Helping Hand says near the end: '... or perhaps to place the Help file and its routines in sideways RAM. The reader

should have enough information to tackle these problems and extend HELP as much as he or she desires.' Indeed!

This in spite of the often expressed editorial opinion that there is not enough help for users of sideways RAM. The article in the March issue on 'reading' and 'writing' bits (or bytes?) to swRAM is useless to me; and in spite of a promise that a future issue would contain aids to enable complete Basic programs and routines to be stored to and accessed direct from swRAM, nothing has appeared.

I suggest that all articles are first read by a non-technical person and those assuming a high level of pre-knowledge be returned to the author for re-writing. Don't be afraid that you will lose readers by teaching Granny to suck eggs. The technically expert can skip what are to them irrelevances.

After all I still buy it, and I have been skipping large chunks of technicalities in every issue.

Brian E Battersby
Oldham

PUTTING THE BRAKE ON BREAK

Sir, Bruce Smith in his Master Review (*AU*, March) refers to 'hecklers who bemoan' the lack of a facility to disable the Break key on the old BBCs. May I add my name to that list of hecklers. When using my BBC B for word processing with *View* I quite often hit the Break key in error as it is next to 'Delete Character' (F9). Though text can be recovered by typing OLD, if I am using EDIT some material is usually lost. Besides it is an infernal nuisance to have to go through the recovery process.

He writes 'if they knew anything about programming they would know that the software key

to do this has always been there'. I do not know anything about programming but would nevertheless be very grateful to know how to disable the Break key. Please could you explain the routine.

Dale Serjeantson
Barnes, London

The normal action of the Break key can be prevented by intercepting the Break intercept vector with *FX247, *FX248 and *FX249. The techniques for using these were discussed in the July 1985 issue (page 145) by Mark Dove.

View 3 has adequate Break protection; in *View 2.1*, typing OLD will restore any text 'lost' by accidental pressing of the Break key. The screen mode can be preserved after a Break by means of *FX255,3,248, or - more permanently - by making the mode selection link on the keyboard. To select mode 3, switch numbers 7 and 8 (on the right or at the top) must be linked.

An even simpler technique is to make a small Break key guard out of cardboard.

TROUBLE WITH COMPATIBILITY

Sir, I agree with Mr L. Cool of London (Letters, July) about incompatibility of standard BBC B software. As a Beeb B+ 128k owner and a regular *AU* and *MU* reader, I would have thought that the software houses would have said something about it but alas not, it seems. People like me who don't have much money to spend must get the feeling that they are being ripped off.

Is there anything I can do to get the software to run? I send back the software to the software houses and they send it back saying it's OK on a standard Beeb but they can't try it on a B+ 128k.

All the software loads OK but then it either does not run or the graphics are mixed up. Surely there must be a way of altering the OS or a program patch that will emulate a standard Beeb? If not, can you explain the incompatibility between the standard Beeb and the B+ 128k?

The software below seems OK on a 128k:

Frankenstein 2000 (Icon)
Chuckie Egg (A&F)
Tempest (Superior)
Cylon Attack (A&F)
Repton 2 (Superior)
Zorakk the Conqueror (Icon)
The Genesis Project (ASL)
Drain Mania (ASL)
Bug Eyes 2 (ASL)
Megasports (ASL)

The following software does not run on a 128k: *Flip* (ASL), *3D Grand Prix* (S Invasion), *Caveman Capers* (ASL), *Space Agent Zelda* (ASL), *Chrysalis* (ASL).

S M Adams
Malpas, Cheshire

QUICK-SCORING MATCH PLAYER

Sir, Great magazine! I've been receiving it since the third issue and it has improved greatly. I find the articles covering products particularly useful.

I enclose my reader survey sheet and I would also like to offer you my best scores on my favourite games. I have played the computer at *Match Day* and beaten it 14-0. This score came after many hours of discovering the quickest scoring technique, which is to run straight down the right wing then shoot diagonally into the goal.

Also, I notice you publish no high score for *Commando*, so I would like to offer my score of 123,600 which is improving almost every day.

K Blatcher
Westcliff-on-Sea, Essex

CLOWNING AROUND

Sir, Michael Lloyd (Letters, July) asks for help with *Circus*. I suggest you type in exactly what it asks you for. Where you need to make a decision (like going north, south, etc) I suggest you move in the first one or two games nearly randomly, making a map as you go. After you make a map of all the outside locations, head for the car, open the boot and get everything in sight. Move back to the tent and map that as well. Then start to play seriously and complete the game.

A few clues? For a start, the clown wants you to dress up for the occasion. It isn't the bucket that needs kicking. Maybe the sealion is hungry. Vandalism is all part of this game, so take it out on the door if you don't like it!

Plain talk? No-one should need to use plain talk. If you are going to read those instruction manuals of yours you are going to have to put up with jargon. And there is no way you can get round that. If you are going to even start to program a computer you have got to have some idea as to the differences between a byte, a bit and a nybble.

Jonathan Day
Stockport, Cheshire

DUMP FOR A COPAL

Sir, Recently I got a Copal SC-1000 dot matrix printer from Cambridge Computer Centre and I am very pleased with its performance in wordprocessing. However, I am a bit disappointed that it's not Epson-compatible as far as screen dumps go.

So far I have not managed to write a working dump, and I was wondering if there is anyone out there who owns a Copal SC-1000 or 1200 who has a screen dump which will work with these print-

ers. I'm tearing my hair out because I can't (as yet) use my printer with AMX *Super Art*, or any of the excellent graphics programs featured in your magazine.

Also, is it possible to change a printer's controlling firmware, perhaps to an Epson one? If this is possible it would solve all my problems.

I am a regular reader so perhaps if anyone can help me, they could contact *Acorn User*, or write in to the letters page.

Anyway, congratulations on a truly excellent, much improved and much worth the extra few pence, magazine.

Tom Oswald
Cambridge

Dear MSU,
Mirrorsoft are doing some Disney characters for their new graphics package for Fleet St Editor. I thought you might be interested in seeing some of the characters I have done. I find it very easy to draw using Fleet St and I think it is a very good piece of software.

PAUL.

ELK OWNER DEMANDS MORE

Sir, After owning an Electron for six months, and reading your publication for five, I must complain about your lack of articles for this very popular machine. You could at least provide a part of the magazine for Electron owners to converse together and discuss matters which do not concern the Beeb or the Atom.

The Electron is a much-praised

machine and most of the major software companies now support it. Electron owners are always comparing their machine to a Beeb – but that is like comparing a ZX81 to an Amstrad CPC464.

As for *Acorn User*, if your magazine ever lowered its standards or drastically changed its format, I would have to go back to another magazine which is currently not half as good as yours. The best part of *AU* must be the Abuser's Diary – more please!

Mark Richards
Brixham
Devon

Our policy is to get Electron (and Master) owners to build on the techniques developed on the BBC and the Atom. All these machines have a common heritage and that should not be lightly thrown away. The Acorn Forum is there to pull machines together, not pull them apart. And it's easy to see at a glance from the Yellow Pages index what will work on the Electron. As we've said in the past, we rely on *you* for articles – so send them in.

MEET US HALFWAY, GUYS

Sir, I have long since resigned myself to the phenomenon of ROM clashes, but must admit surprise when I found that *Mini Office II*'s spreadsheet software would not run with *Pagemaker* ROMs on board. Naive perhaps, but nobody's perfect.

It would appear that the spreadsheet executes a star command which is in the *Pagemaker* support ROM and, bingo, the machine goes belly up.

Easy, you might say. Just turn off the offending ROM. Locations &2A1 to &2AF contain the active ROMs so just set the chosen one to zero and the ROM goes away until the next soft Break. You can type *HELP to see if it is still

there and if it has not disappeared hit Break and then try another location, eg ?&2AB=0.

The implications, however, lead me to wonder just what the software manufacturers are trying to prove. Think of it this way: *Mini Office II* is an excellent piece of software and its spreadsheet is fast and versatile. From the spreadsheet some super graphics can be produced, eg pie-charts, which can then be saved to disc. Using *Pagemaker* these screen images, together with *Mini Office II* wordprocessing text, can be incorporated into an A4 size document to make a very effective report. Wonderful, but for the ROM clash.

On the basis that you are probably not going to be continually moving ROMs around inside the Beeb, natural logic says why not put the ROM disable commands in the !BOOT file? Foiled again! *Mini Office II* seems to have its own disc I/O routines and, although the disc can be catalogued, the !BOOT file cannot be accessed, read or written using standard DFS commands. OK, so it is possible to set up another disc with an initialise routine and a prompt to load the appropriate system disc, but what a pain.

To add insult to injury, both *Mini Office II* and *Pagemaker* boast the ability to use the AMX mouse. You would have thought that the suppliers, Database Publications and Advanced Memory Systems, would have talked to each other about it. Their credibility as serious business people just took a nosedive in my perception.

So I am left to join the expanding ranks of frustrated users by saying to the software publishers, we don't expect 100 per cent software tolerance but meet us halfway, guys! Protect your software by all means but give us a little flexibility to enable us to tailor the start-up files to fit our configurations.

Eric Warmington
Camberley, Surrey

LETTERS

MICRO SPORTS AID

Sir, As the man behind my successful sporting wife (and PE teacher) I often find myself organising sports clubs and the appropriate ladders/leagues/tournaments, etc.

Do any of your readers know of a software package (commercial or otherwise) that would assist me? I already have word-processing and spreadsheet facilities but I am looking for something more specialised.

P M O'Brien
BFPO 57

NEVER MIND THE HEAT . . .

Sir, If you live in the tropics the problem with computers and disc drives is not so much the heat as the humidity. I reckon that we lost 20-odd discs last week as a result of very high humidity.

What happens is that the discs oxidise and when you use them they deposit a nasty goo on the drive head. This sets like rock and does nasty things to the discs. Proprietary head cleaners turn this goo into an even harder rock.

The answer is to clean the drive heads frequently with a matchstick. I know the manufacturers will shudder but our engineer does this to 50 IBMs regularly and it works.

So far as discs are concerned, unless you have a de-humidifier, keep them in a box with a 15-watt bulb lit all the time.

D W Greenwood
Suva, Fiji

MORE ROMS ON DISC

Sir, Since people seem to be writing to complain about the lack of software making use of extra memory/sideways RAM, how

about a list of what is available?

To start it off, here is my contribution of what will run in sideways RAM on the B+ 128k:

- *Speech!* (Superior Software)
- Utility RAM (CCD Computer Services, Winslade Barton, Clyst St Mary, Exeter EX5 1AT). Gives teletext adaptor software.
- Morley teletext adaptor software.

No doubt software houses are scared of piracy but I for one would rather pay the same price for ROM images on disc as they can then be pumped in as required without opening up the machine. Also you do not have to unplug or disable a ROM that clashes.

I wish CCD, Morley and Superior well and hope that other software houses take note. There are quite a few ROMS that I would buy if they were available on disc.

Paul F Tolson
Dewsbury, W. Yorks

INTER VIEWS

Sir, May I please set the record straight regarding our Inter series ROMs. On several occasions in the last few months, including page 29 August issue, a totally misleading non-fact has been stated.

The Inter series ROMs *do not* require a dedicated ROM in order to pass data between them. The large number of people quoting this from your magazine shows how every piece of information is carefully gleaned and remembered! Unfortunate when mistakes creep in, though.

Inter-Sheet is 32k long, split into two ROMs. We assume that if someone only has room for one of the ROMs, they probably haven't got a ROM expansion board and therefore won't have other Inter series ROMs plugged in. In this case, commands to transfer data would be useless. By this reasoning, *Inter-Sheet* is split so that all

the main spreadsheet functions are in one ROM and all those concerned with data transfer are in the other. Thus, when short of space, the 'Sheet' chip is plugged in alone, offering all features except data transfer. On the other hand, *Inter-Chart* is one chip containing its own data transfer commands. So too is *Inter-Word* and so too will be *Inter-Base*. There is no 'extra' chip for data transfer.

Whoever first wrote it, take 100 lines: 'I promise to check things before I write them.'

Rob Pickering
Computer Concepts
Hemel Hempstead
Herts

FRUSTRATED DESIGNER

Sir, Congratulations on your very interesting insight into the workings of *Elite* in the January and February issues, and the superb Commander File Editor. I have now completed both missions. (The first three times I failed the first mission because I never managed to find the constrictor. I rectified this by changing my mission control back to zero so I was set the mission again - and found the constrictor immediately.)

In the January issue, you mention briefly the D. information files but then dismiss them by saying that the commander files are 'far more interesting'. I would very much like to be able to edit the D. files in order to design my own set of spacecraft. This would be of great use to all players of *Elite*, as an inexperienced player could design ships with a low maximum speed and manoeuvrability, and also weak shields, whilst an experienced player could design a host of formidable opponents to tax his or her skills to the limit. Or maybe we could just have a few hints on how to interpret the data in the files. I have tried comparing various D. files and, although I have

found some similarities, I have come no closer to understanding how to change the data meaningfully.

I have also turned my attention to *Revs 4 Tracks* in an attempt to design new tracks, but whenever I make the slightest change to the files, the machine does a reset as soon as it has loaded. Could you help me on this one too? I would be very grateful if you could answer these questions, because it would greatly enhance my, and no doubt many others', enjoyment of these games.

Finally, here is a useful one-liner to perform a memory dump. It prints unprintable codes as the teletext block character (255). All leading zeros are printed. The start address can be entered in hex preceded by the & sign or in decimal.

```
*KEY0 I. "Start:"B$:B% = EV.
(B$):CL.:DIMA (8)
:REP.:P.; ~B%::F.C% = 1TO8:A
(C%) = ?B%:V.32,-48*
(LENSTR$~ A (C%) = 1)
:P.; ~A (C%) ::B% = B% + 1
:N.:V.32:F.C% = 1TO8:V.
(A(C%) > 126) OR (A(C%) < 32)
ORA (C%) :N.:P.:U. FA. JM
```

I M Goldby
Dangerous (without cheating)
Broxbourne, Herts

BRIDGING THE GAP

Sir, I have been scanning the pages of *Acorn User* for months in search of any programs which play Bridge.

Surely, when the BBC micro plays a good game of chess or simulates a jet or racing car it must be possible to devise a program which will play Bridge and provide invaluable training to the thousands of devotees throughout the country?

Go to it software houses - here's a niche waiting to be filled!

B Marshall
Cambridge

SIDWISE ROM/RAM EXPANSION FOR THE BBC MICRO

- ★ Plug-in-and-go construction
- ★ No soldering required
- ★ Ideal tool for Sideways ROM, program development
- ★ 16k Battery backed CMOS RAM, optional extra
- ★ Software for Sideways ROMS may be down loaded and run in RAM under a true Sideways environment

PRICE £38.00 plus £1 p&P plus VAT

SIDWISE PLUS Sideways ROM expansion board for the BBC B+MICRO
PRICE £29.95 plus £1 p&P plus VAT

COLOUR-STICK An advanced lightpen package for the BBC MICRO with icon driven art program. Recommended for Educational establishments. Available in 40 & 80 track disc format or Econet
PRICE £34.95 plus £1 p&P plus VAT

SOFTWARE - CUSTOM ROM/RAM WRITER Utility to produce a ROM image for loading into EPROM or SIDWISE RAM
PRICE £14.95 plus 50p p&P plus VAT

Cheques made payable to Advanced Technology Products Ltd. Allow 28 days for delivery. ACCESS/ VISA ACCEPTED. Carriage to be added to advertised price, then add VAT to the total.

If YOU ever key CHAIN, LOAD, *RUN, *ACCESS, *LOAD, *COPY, *DELETE, *COMPACT, *INFO, *TYPE, *DUMP or *EXEC, then YOU need . . .

BEEBAID

DISC MENU FACILITIES

Three menus available, Load menu, Run menu, and Disk Free Space display. All Menus are mode 7 colour displays accessible using a * command, or more efficiently using L/Break, M/Break and O/Break.
Menus are 'networked', switch between them at the touch of a key.
Load menu loads BASIC programs and automatically lists them with page mode set on - with a single keystroke! However, if you have The Acorn BASIC Editor Rom in your machine, it is entered with insert mode set.
Load menu also loads machine code programs at the correct address for subsequent disassembly. Automatically detects a Rom and prompts for a destination Ram socket.
Touch the COPY key and invoke the Copy menu. Select the files, select the target drive, and BEEBAID does the rest for you. Handles duplicate files, locked files and multiple destination drives.
The Run menu enables BASIC and machine code programs to be executed easily - by all the family! Supersedes all other well known Run menus - B, B+, Master and Tube compatible.
Disk Free Space Display shows the size of all files on a disk and the location of the free space. Touch a key to swap between hex and decimal. Hit 'C' for automatic compact.

For

ROM CONTROL AND MANAGEMENT

Elegant mode 7 colour display of Rom/Ram sockets showing Rom title and read/write/disable status. Switch Roms off and on - permanently for users of battery backed Ram - even across a power off! (Like the Master Series).
Copy Roms to disk by name or socket number. Transfer any Rom to sideways Ram.
Query read/write/disable status of Rom/Ram sockets.
Handlos multiple sideways Ram sockets. Tested with ATPL, Solidisk, Watford and Acorn User Ram extensions.

POWER UP OPTIONS

Permanent cure for screen jitter in graphics modes - essential if you've spent a fortune on a monitor!
HI-BASIC automatically selected when 6502 second processor active.
Shift key switched for ease of keying lower case BASIC variable names.
Increases the speed of that slow keyboard by 30%!
Automatically prevents disks being permanently disabled by some games - no need for power off.

***DISK FILE INDEXING SYSTEM**

In addition to all the facilities already listed, the BEEBAID Rom is supplied with a Disk File Indexing system. This system automatically maintains an index of all your software and allows you to categorise your programs, eg. Games, Educational, Simulation etc. It can be dynamically tailored to your own requirements, eg. your disk drive configuration and which directories you want to index. The Index may be searched by program name, disk number or category. It is supplied on a 40/80 compatible disk with its own bound manual and it is FREE!

***AND MUCH MORE**

Dump the current text window to the printer with *DTWindow.
Zeroise memory segments using *ERASE commands, including selectable Ram sockets.
Turn the Tube on and off using *TUBEON and *TUBEOFF. Preserves status of text or programs held in second processor.
Relocate any memory segment with *SHIFT.
Relocate any BASIC program with *MOVE.
Disable the Econet system using *NONET.
Load a program to the correct address using *DOWNLOAD.
Enhance your BBC Micro with some 20 additional Break commands.

BEEBAID is fully 6502 second processor compatible and has been tested on model B, B+128 and Master Series machines using the Acorn DFS. It has been tested with several sideways Ram boards including ATPL, Watford, Solidisk and Acorn User, using single and multiple Ram sockets. It has also been compatibility tested with many other Roms.

To order your copy of BEEBAID, simply fill in the cutout and send it with a cheque or postal order payable to:

JAYSOFT at: For technical enquiries please call 01-462 8453 (7-9pm)

114 KINGSWAY, WEST WICKHAM, KENT BR4 9JQ

Please send me BEEBAID packages comprising 16K Rom, 40/80 compatible disk and 2 manuals at £34 inclusive. I enclose a cheque/postal order for £

MASTERING MANUALS

Sir, Having recently purchased a Master 128 I must say how pleased I was with it. Having upgraded from a Spectrum 48k I was most impressed with the sound, colour, etc. But looking through the adverts in the June edition, I could not find any mention of software for the Master series. Does all the BBC B software work on the Master if I switch to DFS and use the Convert program on the utilities disc? Or will I have to make do with the game on the welcome disc for the rest of the computer's natural life?

Another gripe is the amount of information put into the welcome guide (or rather, not put in there). Just when it looks that it's saying something of great interest, it instead coins the cliché: 'But that is beyond the scope of this guide.' The extremities of this were when introducing *View*, *Viewsheet* and *Editor*. Apparently all the mysteries of the universe (or at least the Beeb Master) are contained in the Reference Manuals, approx £15.00 each. After taking delivery of these two manuals I must say how pleased I was with the information content, even though I found them pretty heavy going at first. The Master seems so much more advanced than the BBC B computer (according to the manuals) but will I ever get to see all the amazing things it can do, in the way of graphics, etc, if I can't get any software for them?

Anyway, all moaning done with, I must congratulate Acorn for a brilliant computer.

VERSE AND WORSE

Sir, Help is now at hand for those still wandering about in *Twin*

Kingdom Valley. I have just burst into rhyme to help you.

To get the Bronze Key you must give
The witch an extra eye;
A Palantir – don't try to fight,
Or you will likely die.

Out of the maze you'll find a
dungeon
Dank and cold and grim.
You'll see a guard – a kingly gift
You have to give to him.

Your gift accepted, find yourself
In audience with a king.
His champion you will receive
A periapt, this thing.

Another thing you must acquire
A precious silver key
You'll never have. Your quest
fails if
You see the Princess flee.

To catch her eye she must be
shown
That unto her king you are
known.
Then if you venture back to court,
You will obtain your just reward.

Two ways to cause a dragon's
end:
One is to have a large strong
friend!
The other is a staff of power
Locked within a nearby tower.

So you now dragon slayer be
And in your hand the Master key.
Use it to open every door
To find what you are looking for.

And once you have a treasure
chest
Your answer lieth due south-west.
Near waters meet you'll pass the
test
And find that which is truly best.

Bronze, Silver, Gold and Master
keys,
You should by now have all of
these.
Hard-won bags of silver, gold
And other treasures now be told.

A bucket filled up to the brim,
A chest of gold there at your feet.
You find you have 1k of points –
And yet your task is incomplete!

All of these treasures you will
need
If your great quest is to succeed.
Now look on that which lies
nearby.
That's all, well done, stay cool –
Goodbye!

If you are still stuck, phone 01-
539 7039 between 8pm and 9pm
weekdays and ask for Steve or
Mark.

Leytonstone, London

PRESERVING WORKSPACE

Sir, Re your reply to Clive Brown's letter in July's *Acorn User*, here is a reader about to prove you wrong (as you anticipated!) on the question of a sideways RAM resident disc workspace which would leave PAGE at &0E00.

I have been using MRM Software's E00 DFS for over a year now, and have found it to be very good. It is a small circuit board which plugs into a ROM socket, and contains a DFS Eprom, a 4k RAM chip and a small decoder IC. A lead is connected from the board to the R/W line on the 8271 using a spring clip. It works happily in the basic BBC B or one fitted with a ROM board *which will accept sideways RAM*, but does not prevent the fitting of such RAM.

The DFS RAM is not corrupted by writes to &8000-&BFFF as it is only enabled when the DFS ROM is selected.

As its name suggests, the DFS leaves PAGE at &0E00; it appears to be functionally identical to Acorn DFS 1.20, and it will run *Elite*, *Dune Rider*, *Doctor Who*, *Hyper Sports*, *Powerplay*, etc, etc. Unfortunately, it will not run *Revs* but will run it if the 4 *Tracks* disc

is used first! It also works happily with most disc utilities requiring DFS 0.9 or DNFS (DFS 1.20).

I cannot see why a similar idea could not be implemented for the ADFS; the only change would have to be an 8k RAM chip on the board instead of a 4k; this would however map the DFS ROM into &8000-&9FFF and the RAM into &A000-&BFFF, like a 16k Eprom.

Unfortunately, MRM are no longer trading, so it is now up to some enterprising company to produce and market a similar device for the ADFS. Are there any takers out there?

WHERE ARE ALL THE MASTERS?

Sir, Have Acorn really gone out of business? Are the reports of the Master series just rumours to prevent BBC fans rioting?

I live in the Grimsby area, and I regularly visit the local computer stores. I have yet to see a Master. I have yet to see a BBC B+. In fact, apart from a few Electrons that Dixons and Boots were selling off cheaply, I have not seen an Acorn computer in the shops since before Christmas 1985.

I realise I live in a fairly rural area north of Watford, but civilisation did eventually reach here. I know there is mail order. It would be nice to see before buying, and one hears such horror stories. However, I do use mail order a lot but I wonder for how much longer... And for how much longer will I be able to buy my favourite specialist BBC magazines?

Seriously though, it is my opinion that, if Acorn do not organise their *national* marketing the way Amstrad/Sinclair seem to do, they stand to lose a lot of business.

Keith M Newborough
North Thoresby
Grimsby

WITH A LITTLE HELP...

Sir, Being a semi-advanced user, who sometimes forgets codes, etc, I was very interested in the Get By With A Little Help article in your July issue. I typed the (rather long) programs in, and entered my help information. However, when I came to delete an entry, I used a disc sector editor as suggested, but found that the formatting of the list printed by *H<RETURN> was wrong. I realised that this was because the routine was printing an extra two spaces around the 'null' entry. The way to cure this is not to use eight nulls, but to use six nulls and two delete characters (ASCII 127 or &7F). This deletes the two extra spaces, and keeps the columns straight. Otherwise the program is excellent.

I have two complaints to make about your magazine; the high score table has had the note 'Please say whether your score was notched up on a BBC micro or Electron... because in future issues we'll be publishing separate tables for each micro' since September '85 (how long can we wait!). And you don't publish enough Basic Checksums, which are useful even in assembler, as they pinpoint the line exactly.

Apart from that, I find the magazine great value for money.

Misha Dorman
Rode, Bath

SHOPPING BY POST

Sir, I read with interest the letter from Maurice Gordon in the July edition of *Acorn User*, and note his sorry experience with mail order firms. I feel that I must comment on behalf of those who have received excellent service from such firms. Although resident in Saudi Arabia, I have had no difficulties in obtaining both software and

hardware from firms in the UK, and in particular must commend Watford for their very prompt replies to all my letters. What minor delays I have experienced have been due to the post, as surface mail takes about three months to reach me from the UK, but in most cases this has been avoided by the use of airmail. I have had clear, intelligent replies to all but one of my postal queries, in dealings with a range of suppliers, and in the one instance where software was advertised before completely ready, I was offered an immediate refund if required, and the cheque was not banked until the package was dispatched.

While I sympathise with Mr Gordon's understandable frustration with dealings from afar, I must say that my experiences have been most satisfactory, and much prefer shopping via the pages of *AU* to that of walking the streets of Bristol, returning home empty-handed yet again. There are always two sides to a story - I would like to think my experiences are in the majority, and I for one will certainly continue to use mail order.

I must finally thank you for a most interesting magazine. It's a welcome read every month out here and, together with my Beeb, gives great pleasure in off-duty moments.

Michael Beattie
Riyadh, Saudi Arabia

UNIVERSITY CHALLENGE

Sir, I have owned a BBC B for almost two years and in those two years I have been a faithful reader of your magazine. I work at the Brussels Free University and do research in the area of computer graphics. With the programs published in your magazine I was able to make some drawings that approached some I made on a Macintosh.

Since the main field of my

research lies in the study of fractals I was glad to find some related articles and programs in your magazine. I have converted the program of your October '85 issue to run on a laser printer and enclosed is a result of that conversion.

I also modified your last program on fractals (May '86) so that it would run with the 16 colours

Fractals for a laser printer

mentioned in the article but without the use of a Graphics Extension ROM. The trick is to modify the byte stored at &359. This byte is used by the processor to store the current foreground drawing colour. Since a colour in mode 2 only needs four bits, two colours can be stored in this byte. If you store two different colours in this byte, then generate a draw command, the line will be drawn in mixed pixels of the two colours.

WE DON'T MAKE THE RULES

Sir, I am appalled by your blatant display of dual standards.

On one hand you refuse to publish the free ads that mention swapping or selling software. Surely, once purchased, *any* item can be resold or exchanged as second-hand. On the other hand, you publish ads for a Demon modem that is not only 'non-approved' but actually carries a 'prohibited' label. The offer also includes 'free' registration to Microlink. This advert incites people to break the law and risk prosecution.

Acorn User obviously condones the flaunting of the laws relating to equipment being connected to British Telecom lines, and yet will not allow the sale of genuine, though second-hand, software through your pages.

Anthony Howard Jorth
Shipley
Yorks

You are right in saying that items can be resold, but that is not the reason for our ban on swapping software through the free ads page. It came about because ads were being used to swap or sell *copies* of software, which is illegal.

The rules on telecommunications hardware are complex, but the companies you cite were complying with the law, which states that advertisements must say whether the apparatus is approved or not for connection to the BT system. It is legal to advertise 'prohibited' products. It is legal to buy them. It is not legal to connect them to the phone system. This is an example of the law passing the responsibility down the line to the end user.

It might seem a strange system, and it is one which *Acorn User* did not invent, but which we must comply with.

HINTS & TIPS

Martin Phillips continues his review of standard printer codes and explains how screen dumps are programmed

DOWN IN THE DUMPS

To judge from the letters we receive, printers cause more distress and confusion than almost all other problems put together. Many readers have asked for help with screen dumps, so this month I shall show how screen dumps are programmed on dot matrix printers and how they work. Understanding how screen dumps work requires a knowledge of printer commands, as well as a knowledge of how screen images are stored by the computer.

First, what is a screen dump? It's a program that will copy an image of a picture from the screen and dump it to a printer. Usually the foreground colours are printed in black, but it is possible to show each colour as a shade of grey - a tone dump. These are even more complicated than normal screen dumps and, as several have been presented in *Acorn User*, they will not be covered here (see references).

Screen dumps usually work in modes 0-6. Mode 7 screen dumps are possible but work in a totally different way and are outside the scope of this article (see references). A picture screen dump is different from text printing because normally the particular letters, numbers or punctuation marks are each sent as a single code number, which the printer then converts back into the required symbol. The codes follow the ASCII standards. (ASCII stands for American Standard Code for Information Interchange.) They are a standard set of code numbers which relate the various symbols on the keyboard - letters, punctuation marks and numbers - to numbers.

ASCII codes are normally in the range 0 to 255. The ASCII codes from 0 to 31 control the printer's actions, codes from 32 to 127 are used for the letters, numbers and other symbols. Usually codes in the range 128-255 are not used. The VDU summaries in the *User Guides* list the VDU codes in the range 0-31 and 127, and give the ASCII abbreviations. The rest of the ASCII codes can also be found in the *User Guides*, where there are charts showing the ASCII (modes 0-6) displayed character set. The use of these codes explains some peculiarities of the keyboard.

BBC and Master owners will be aware that some keyboard symbols appear differently on the screen in mode 7. The reason is that the

Figure 1. How characters are programmed to be sent to a printer

teletext chip which puts the coded signals on to the screen as recognisable characters does not use the exact ASCII codes, so some symbols appear differently. However, once in any other mode, these codes are interpreted by a different chip inside the computer which does get things right! The same thing can happen with printers too, the pound sign being a common example. Perhaps it should be called AASCII - American Almost Standard Code for Information Interchange.

Before delving into the depths of screen dumps, let's look at how graphics can be sent to the printer. The easiest way to do this is to see how single characters can be programmed and sent to the printer. The idea is to use the 'bit-image' mode. This is actually quite easy, although you'd never realise that from the average printer handbook.

First, draw a grid eight rows high by as many columns as required. In this example I am going to define a special symbol to represent one of the function keys. The symbol is shown in figure 1 and will print an 'f1' symbol on a black background. This is similar to the user-defined characters available in BBC Basic except that the number of columns can be any number and not just eight, and the definitions are added up vertically (starting at the bottom) instead of horizontally. Note that the ninth dot wire of the printer is not usually used in bit-

image mode. Some makes of printer handle bit-image mode differently; the early Seikosha printers, for instance, worked from the top down, so that the example given here would appear upside down. It is fairly easy to modify the character definition to put this right. All the programs given here are designed to work on Epson-compatible printers.

The bit-image mode is set by using the ESC K command. This can be found in the printer handbook, usually in a chapter on graphics printing. The Epson FX80 handbook gives the command for this mode of printing as:

```
CHR$(27);"K";CHR$(n1);CHR$(n2);
```

Now that's enough to make anyone give up. Why such a complicated expression? Well, few printer handbooks are written with BBC in mind, and they are normally written in Microsoft Basic, a 'dialect' found on many other computers, but one not as good as BBC Basic. Therefore we have two problems. First to understand what the command is trying to do, and second, how to program that in BBC Basic. The bit image mode of the printer is set using the ESC K code. This translates into BBC Basic as VDU27,75. The number 27 is the ASCII code for the abbreviation ESC, and 75 the ASCII code for K. If you look at the VDU code summary in the *User Guide* you will see that code number 27 does nothing, but its ASCII abbreviation is ESC. The capital letter

K has the ASCII code number 75. (Note that k has a different ASCII code.) An easy way to find the ASCII codes for the various characters is to type a line similar to this:

```
PRINT ASC("K")
```

In this case the number 75 will be given. This does not work with the ASCII control codes in the range 0-31.

A problem with the bit-image mode is that, once it's set, all other codes are translated by the printer as data. Thus it would not be possible ever to switch off this mode. So the code has to be programmed in such a way that it will terminate itself. This is achieved by also including a number which gives the number of bytes of data which will be sent to the printer. The ESC K code has to be followed by two more bytes, which give the number of data bytes which are to be sent. As a large number of data bytes can be sent in the bit-image mode (up to 1920 per line on an 80 column printer), a two-byte number is required. The first byte gives the low part of the number (ie, number of data bytes MOD 256) followed by the high part of the number of bit-image data bytes (ie, number of data bytes DIV 256). Thus to send the character to the printer in bit-image mode, we need to send 11 bits of data. So our code translates to:

```
VDU 27,75,11,0
```

There is just one more thing that needs to be done. These codes need to be sent to the printer only, so we precede each one with a VDU1 code. VDU1 tells the micro to send the next byte to the printer only. Therefore we end up with:

```
VDU 1,27,1,75,1,8,0
```

a pretty far cry from:

```
CHR$(27);"K";CHR$(n1);CHR$(n2);
```

The computer can be used to find the values that you need for n1 and n2 by using the following short program:

```
10 INPUT"Enter number of columns "N
20 PRINT"n1 = ";N MOD 256
30 PRINT"n2 = ";N DIV 256
```

Having defined the symbol and sorted out bit-image mode, we can now get the printer to print out the symbol. Listing 1 in the yellow pages shows how this can be done. The printer is switched on by the VDU2 command, and off by the VDU3 command. The printing of the symbol is done by PROCsymbol. It first sends the bit-image code to the printer, and then sends each of the 11 bytes of data. When the character has been sent to the printer, the printer will return to the text mode and carry on printing normally. If the printer is expecting 11 bytes of data and receives only 10, it will hang up. If it receives more than 11 bytes then the extra bytes will be printed as normal ASCII

symbols, and unexpected symbols will be printed out.

There are several variations on the bit-image mode. Most printers have 'dual density bit-image', and 'quadruple density bit-image' modes. Dual density symbols can also be drawn and these give a better print quality. This is printer code ESC L. Because each vertical row of dots overlaps the previous one, twice as many columns need to be sent. Listing 2 shows how this is done. The number of bytes sent is changed in line 150 to 22, and each column of data is repeated twice. A similar set of changes would need to be made for quadruple-density, although there is little improvement in quality.

Bit-image mode is not really too difficult. It is also quite easy to extend the ideas to a full screen dump. First we need to know how the computer's pictures are put on the screen. The graphics screen is based on a grid of 1280 dots across, 1024 dots up. The BBC does not work to this resolution, however, as the following chart shows.

Mode	Horizontal resolution	Vertical resolution
0	640	256
1	320	256
2	160	256
4	320	256
5	160	256

In all modes the vertical resolution is 256, but the horizontal resolution varies between 160 and 640. Screen dumps are slow, because they have to test each point on the screen and send that information to the printer. In mode 0 this requires testing 640 x 256 bits of information - 163,840 bits altogether.

The first consideration is the mode size, with the number of dots to be printed. The normal density bit-image mode gives 60 dots to the inch. On paper which is normally just over 8in wide, this gives a maximum of 480 dots per line. This is fine for modes 1, 2, 4 and 5 where there are 320 dots per line, but in mode 0, with 640 dots across, there is not enough room. Here double density bit-image mode is useful, as this allows up to 960 dots per line. Listings 3 and 4 show the two appropriate variations on the screen dumps. In each listing PROCcircle is a routine to draw a series of circles on the screen which are then dumped to the printer.

The dumps work in a similar manner to the symbols printed by listings 1 and 2, except that this time the screen is scanned using the POINT statement to determine which pixels are not in the background colour. In listing 3,

the screen is scanned in a 320 x 256 grid, and in listing 4 in a 640 x 256 grid. The inner y% loop is used to build up the printer byte column, which is held in the variable D%. Integer variables have been used to speed up the screen dumps. They can be speeded up more by

The references to X%, Y% and y% relate to those variables in listings 3 and 4.

Line 330: Switch on printer

Line 340: Set maximum Y% value to 1023

Lines 350-

360: Set line spacing to 8/72 inch

Line 370: Start new line. Set X% to 0

Line 380-

390: Send bit-image command (line length 320 or 640)

Line 400: Start new y% column

Line 410: Perform equivalent of POINT

Lines 420-430: Check POINT and increment byte if above 0 (Change BEQ to BNE for inverse dump)

Lines 440-460- Subtract 4 from Y% and check column end

Lines 470-480: Send byte to printer and increase X% value

Lines 490-520: Check for end of line (X > 1279)

Lines 530-540: Reset printer and disable it

Line 550: : Subroutine to send bytes to printer preceded by VDU 1. Accumulator value put on stack until VDU 1 has been sent

Description of listings 5 and 6

leaving out the variable after each NEXT. At the start of each line, the bit-image code is sent to the printer, and at the end of each line the new line code is sent. This is the VDU1,10. If your printer does not go on a new line with this dump then either change this line to read VDU1,10,1,13 or alter the printer 'dip switch' which gives a line feed to the 'on' position. Details of these dip switches can be found in your printer handbook.

Listings 3 and 4 can easily be changed so that they produce an inverse print, that is white lines on a black background. All that needs to be changed is line 340 in either listing to read:

```
340 IF POINT (X%,Y% - y%*4) = 0 THEN D% = D% + 1.
```

Similarly, it is possible to dump any colour combinations by changing that line. Thus to dump any red graphics in mode 1 line 340 would need to be changed to:

```
340 IF POINT (X%,Y% - y%*4) = 1 THEN D% = D% + 1
```

Notes: ¹No more information available. ²Uses different code sequence

Standard printer codes for another eight printers

These screen dumps are painfully slow, and an appreciable saving in time is gained by using machine code. The technique for a machine code screen dump is exactly the same as for a Basic screen dump. The biggest problem with a machine code dump is the lack of the convenient Basic FOR . . . NEXT loop. An OSWORD call has to be made, equivalent to the Basic POINT routine when an accumulator parameter of 9 is used. The OSWRCH routine is the operating system equivalent of the VDU call.

One problem with the screen dumps so far is that they do not produce round circles. The reason for this is that printers print with a vertical spacing of 72 dots to the inch, and with a horizontal spacing of 60 dots to the inch. Thus the circles appear as ellipses. Some printers now include another graphics command. This is the ESC * code, which will allow several graphics variations. Epson printers have seven variations; some printers, including the Citizen 120D, have eight. This code, with a parameter of five, allows graphics with 72 dots to the inch to be produced, thereby offering true circles. The changes that need to be made to listing 5 are:

```
380 LDA #27:JSR printer:LDA #42:JSR printer:LDA #5: JSR printer
```

For those who have a printer like the Citizen 120D which has eight variations, the last one will produce a dual-density proportional screen dump. This can then be used with the mode 0 screen dump. The following changes need to be made to listing 6:

```
380 LDA #27:JSR printer:LDA #42:JSR printer:LDA #7: JSR printer
```

Note that this will not work on many printers.

Once a machine code dump has been made to work, it can be saved as it stands, and also the machine code element can be saved on its own. To do this, run the program and when it has finished type:

```
*SAVE SDUMP 900 +FF
```

and the machine code part will be saved to cassette or disc with the filename SDUMP. It has been located at &900, usually quite a safe area of memory, but other locations could be used. To use the screen dump from within programs, several options are possible:

1 Include the assembler procedure in the listing and run it at the start of the program. Then call it up as in listings 5 and 6.

2 Load in just the machine code element at the start of the program by including a line such as:

```
*LOAD SDUMP
```

and then call it up as required.

3 Disc users can load in and run the dump by including the line

```
*SDUMP
```

at the appropriate point in a program. The machine code dump must be on the program disc, and, of course, the disc will have to be kept in the disc drive while the program is running. This technique is very useful if memory space is a problem.

A final point on the note of screen dumps. The graphics origin must be set at 0,0 to produce a full screen graphics dump. Otherwise the dump will include areas that are off the screen and these will be printed in black.

QUICKFIRE QUESTIONS

Staying on the subject of printers, this month's quick hints are all connected with printers.

- Do get the printer paper thickness setting correct. This is a small lever at one side of the roller. It gives a blacker print and makes the printer run more quietly with less wear.

- Having set the dip switches on the printer, do not change them when a new effect is required. These switches are not designed for frequent use, and will soon become unreliable. Use software commands instead.

- Having trouble loading fanfold paper? Load it in at the first fold with the paper doubled-up.

- Do the descenders (the tails on the ys and gs, etc) on your printer look faint? This is because with infrequent use they tend to get gummed up and stick. Free them off by printing a few lines of gs or ys - eg, enter the following line:

```
VDU2:FOR N=1 TO 5000:P:"y";;
NEXT:VDU3
```

STANDARD PRINTER CODES

In January's Hints and Tips I asked for help to produce a comparison chart of printer codes for a whole range of printers. This was to make it possible to see at a glance which codes are standard and which are not.

The codes for the first 10 printers were published last month and this month eight more are included (see table 1, opposite). The codes published are those which are generally the most useful; they do not represent the total list of codes.

For instance, the printer tab commands have not been included as a wordprocessor can do just as well by adding spaces or using Tab, without having to resort to these specialist printer commands, and few if any programs need to make use of them.

QUINN'S QUICKIE

Many readers have written to us with comments on the reviews of Mirrorsoft's *Fleet St Editor* and the AMX *Pagemaker* in the May and June issues. To clarify one of the major points, none of the pictures in the *Pagemaker* review, and just two in the *Fleet St* review were supplied with the package.

The cartoon figures of Willy Whitelaw, Leon Brittan, Flook, Jane and Spiderman were done by tracing enlarged photocopies of the originals on to a clear plastic bag with a ballpoint pen.

The tracing was then stuck on the monitor and used as a guide when drawing from scratch. Days of pixel-editing did the rest!

FIRST BYTE

MACHINE CODE MADE EASY

The second of two articles on machine code programming:
how to combine Basic in your programs

Tessie Revivis

Writing long programs in machine code can be quite time-consuming. Many software houses first write their programs in Basic to work out the logistics before translating the software into machine code. In many cases a first-rate compromise can be made by combining machine code and Basic – the main framework of the program is written in Basic and then the sections that need to work fast (typically animation or moving large areas of memory) can be translated into assembler, with the

```

Listing 1. Program to print the alphabet

machine code being called at the appropriate points within the program. Some examples will make this clearer.

Listing 1 is similar to that published last month in that it will print the alphabet. However, unlike the earlier program, the control loop used to move from the letter A to the letter Z is written as a FOR . . . NEXT loop in Basic. The machine code assembled by PROCass simply prints the current letter, and this is called from within the FOR . . . NEXT loop. The current letter, defined by the ASCII code held in loop% is passed into the machine

1	1	0	0	0	0	1	1
1	0	0	0	0	1	1	0
0	0	0	0	1	1	0	0

0	1	1	0	0	0	0	0
1	1	0	0	0	0	0	0
1	0	0	0	0	0	0	0
0	0	0	0	0	0	0	0

Figure 1. Bits on the move

code via the integer variable A%. Because the accumulator can only hold numbers in the range 0-255 the value of A% should also be kept in this range. Attempts to pass higher values will not work as expected. The variables X% and Y% may also be used to pass values to the X and Y registers in the same fashion. Thus values may be seeded into these registers from Basic very easily. The example in listing 1 is very simple and does nothing spectacular, other than clearly demonstrating the point.

Listing 2, on the other hand, is much more interesting: a good way of ending a screen display is to make it wither away – which *Repton* does to good effect. It seems complicated at first but with some knowledge it can be written in just 27 bytes of machine code. Listing 2 contains several mnemonics which we have not yet discussed but that should not stop you from entering and running the program to see the effect. Briefly, what is happening is that the machine code is accessing every byte on the screen (and there are 20480 in all!) and shifting the 8 bits which make up the byte along by 1 bit at a time to the left so that the left-most bit falls off. The empty right-most bit is replaced with a zero – which shows up as black on the screen. Figure 1 shows how this works – if you follow the two 1s on the right, they shift to the left and appear to work their way through the byte, falling out on the left-hand side after eight shifts to the left.

This type of shift is known as an Arithmetic Shift Left which has the mnemonic ASL in assembly language. Why arithmetic? The answer is because it undertakes a fundamental

mathematical operation – shifting the bits to the left by one position effectively doubles the byte's value! To understand how this works requires a knowledge of binary representation – the Jan 86 issue of *AU* had a description of this on page 61 so look there if you need the detailed explanation. In summary, though, each bit position is greater than the first by a power of 2, so the left-most bit has the value $2^7=128$, the next bit the value $2^6=64$, the next bit $2^5=32$ and so on up to the eighth bit which has the value $2^0=1$. The binary value 00000011 breaks down to 2^1+2^0 which simplifies to $2+1=3$. Shifting left by one position gives 00000110 which is $4+2=6$.

The operation which complements ASL is LSR – Logical Shift Right. This halves the value of the byte in question – you might like to try to adapt listing 2 to 'wither' the picture off screen in the opposite direction.

Two-pass assembler

The assembler in the BBC micro and Electron is referred to as a two-pass assembler – because it's often necessary to assemble a program twice by enclosing it within a FOR . . . NEXT loop, as we did in listing 2. The reason can be found by studying listing 2 and referring back to listing 2 of last month's First Byte. There we defined a label that could be jumped to by the program, thereby enabling it to loop, rather like this segment of an assembly language program:

```

100 .start
110 TYA
120 JSR &FFEE
130 INY
140 CYP #ASC"Z"
150 BNE start
    
```

When the program is run the assembler assigns an address to the label 'start' – when it reaches line 150 it can calculate just where the program needs to jump back to. However, consider the following segment:

```

100 CPY #ASC"Y"
110 BNE end
120 TYA
130 JSR &FFEE
    
```

```

Listing 4. Moving blocks of memory, first using Basic, then machine code

140 INY
150 .end

Now when line 110 is reached, the program will have no idea where 'end' is (as it has not yet encountered it) and so an error will occur. In two-pass assembly the first pass is used by the assembler to find out just where all the labels are and to assign addresses to them; in the second pass the assembler has access to a table of these addresses which it can then assign to the instructions that require them.

Look again at listing 2 and you can see how the two passes are implemented. What is not

immediately obvious is why the particular step size is used (line 380). The answer lies in the assembler pseudo-mnemonic called OPT. This controls the way in which your assembler carries out the two-pass assembly - there are three different ways which are summarised in table 1 on page 57.

The loop used in the listing suppresses errors in the first pass (vital, otherwise an unrecognised label would cause an error) and allows them during the second pass (again vital as you may actually have an error!). The use of an OPT value of 2 during the second pass also

suppresses the assembler data listing being displayed on the screen - try changing the two 2s in line 170 to 3s:

380 FOR pass%=0 TO 3 STEP 3

and you will see an assembly data listing displayed when you run the program. The only other important point to remember in two-pass assembly is that the value assigned to P% takes place within the loop. This is so that the code is assembled in the correct position during the second pass and not on the end of the first erroneous piece of machine code, which would otherwise be the case.

35cm SQUARE DISPLAY

INTEGRATED TV/RGB
SWITCHING

FST TUBE

MONITOR STYLING

Flat square tubes are made for high quality picture performance. Why not consider one?

The '15"' P40 range has:-

★ 36cm Flat Square display Tube.

★ 0.5mm Stripe pitch for high resolution.

★ 3 way operation:-

1. High resolution TV, 2. Composite Video and Audio, 3. RGB (and Audio)

★ Integrated switching & level control.

★ RGB Contrast & Brightness

★ Automatic colour balance for long term stability

★ Other sizes are '21"' P55 range, '24"' T63 and the high quality '28"' M70 which is ideal for group viewing.

A high quality advanced design **GRUNDIG TELEVISION** Modified only by

NEWARK VIDEO CENTRE for the BBC Computer.

Manual set (P40125) £275.00. Remote control (P40245) £299.95. With teletext (P40245TT) £359.00. Prices include carr. & VAT. BBC Leads £5.99.

Table 1. Summary of OPT values

Addressed up

Look at any assembly program and you will notice that many of the mnemonics it contains are similar but the operand can take a different format (see last month's article). This format is called the addressing mode. Listing 3, when run, will print the letter p on the screen – the ASCII code for the letter is loaded into the accumulator in line 110. Because the action is done immediately by the machine code, the address-

Listing 3. Immediate addressing at line 110

ing mode is known as immediate addressing – the ASCII data is immediately after the opcode in the operand. The immediacy is implied by the hash after the mnemonic. Now change line 110 so that the hash is deleted:

```
110 LDA &70
```

and re-run the program – the result will be random because we have now changed the addressing mode so that the accumulator is loaded with the contents of the location &70 – the operand is no longer treated as the immediate data byte but rather the address where the data is stored. Type:

```
?&70=&70
```

Location &70 with zero page now contains the ASCII code for p; if you re-run the program a p will be printed. Poking any value into &70 will result in the value being displayed as an ASCII character. As an exercise try writing a program using this technique to print the alphabet backwards. Because the data is stored in zero page this type of addressing is known as zero page addressing.

The next question is how does the machine

Listing 2. Two-pass assembler at work

code know which addressing mode is being used when it comes to interpret the opcode. The answer is in the opcode. When the assembly language program is run the assembler generates an opcode which also distinguishes the addressing mode. If you re-run both versions of listing 3 and look at the assembly data you will see that the opcodes for LDA# and LDA are different from one another: &A9 for immediate addressing and &A5 for zero page addressing.

The addressing mode is not limited to just the LDA mnemonic. In fact most mnemonics, though not all, will allow some if not all addressing modes to be used. Another type of addressing mode is 'absolute addressing'. Here, absolute means a two byte address, ie &7C00 is an absolute address. With second processor and shadow memory switched off (if you have them) you can write directly to the

screen memory. Make the following changes to listing 3:

```

110 LDA #&33
120 STA &7C00
150 MODE 6
```

When you run the program now, you will notice that two small lines will have appeared roughly in the centre, two-thirds of the way down the screen. To understand why we have two lines, look at the bit pattern for &33 – 00110011. A 1 shows up as a white dot and a 0 as a black dot – thus we have two sets of two dots, which appear as short lines.

Addressing modes are therefore important – the 6502 has a basic set of 55 mnemonics, but the use of different addressing modes effectively extends this to 152 different operations.

On the move

The final program presented this month (listing 4) is both a good demonstration of the speed at which machine code runs and also provides a useful routine which you might like to try to incorporate into your own Basic programs – particularly those involving animation. Simply, it can intelligently move large blocks of memory. When run the program displays a simple mode 1 screen with some text windows; the top section of this screen is then copied to the lower half in Basic, though rather slowly. When this is complete it does the whole thing again, but this time uses a machine code move routine in the bat of an eyelid. Note that this program, like listing 2, accesses the screen directly – so make sure that you turn any Shadow RAM or second processor off before you enter it.

The program is simple to use because it requires just three pieces of information: the start address of the area of memory to be moved (S%), the destination 'end' address (E%), and the length in bytes of the memory block to be moved (L%). These variables are set in line 110 of the program.

The last two months should have shown just how easy it is to use assembler. Even if you have not used it before, you do not have to be an expert to type in assembler listings from magazines such as *AU* or from books. Do experiment with the listings presented on these pages by incorporating them into your own programs.

We have only scratched on the surface of the subject – it is a large one – and I will be returning to it on a more regular basis. In the meantime why not buy a book on the subject or borrow one from your library and have a bash at getting into assembler. A personal recommendation would be *Mastering Assembly Language* published by BBC Publications.

CENTRONICS GLP & Brother M1009 (NLQ) Printers

A major price break-through in NLQ Printers from Watford.

At last, a full feature Epson compatible NLQ printer at a price that everyone can afford. Due to Watford's bulk purchasing power and low margins we can now offer this incredible printer deal direct from the manufacturers to our customers.

The Centronics GLP printer which is manufactured by BROTHER (and also marketed by them under their own brand name M1009), features a Near Letter Quality (NLQ) mode using a 23 by 18 dot matrix for each NLQ character (this is the same as is used by the very popular Kaga Taxan printers). The NLQ Font Rom supplied is Watford's own Professional NLQ ROM for the GLP/M1009.

Single, double and quadruple density graphics modes as well as four character widths and super/sub script printing are also supported, along with many other facilities normally found on printers costing twice as much.

Handles upto 9" wide paper. Friction feed standard, tractor feed optional extra.

GLP is bidirectional logic seeking. Has a 9 needle print head. 50 CPS. Parallel interface only.

Special Offer £99 (carr £5)

Tractor Feed Attachment £7

Centronics GLP Mk2 (Brother M1109) NLQ Printer

100 CPS, (25 in NLQ mode), Bi-directional, logic seeking, Friction feed, tractor feed optional extra, 2K Buffer. Has both Centronics parallel and RS232 both as standard. Simply at the flick of a DIP switch, the Mk2 printer swaps between full IBM or Epson compatibility.

Launch Price: £139 (carr. £5)

Tractor Feed Attachment £7

BROTHER HR-15XL (NEW IMPROVED FAST HR-15XL)

The new improved Brother HR15XL is a very high quality and very fast daisy-wheel printer for serious use. Notable features of this printer include a 3k buffer, 20cps, bi-directional proportional spacing, Centronics interface standard, (RS232 optional), optional Sheet Feeder and Keyboard.

ONLY £285 (carr. £7)

Electronic KEYBOARD	£135
TRACTOR FEED Attachment	£84

Panasonic KX-P1080

From the prodigious Japanese Stable of Panasonic comes this fabulous new NLQ Dot Matrix Printer

Available NOW at a superbly realistic price, the KX-P1080 perfectly balances features, quality of construction and Value for Money to produce the printer of tomorrow, here today, ready to sweep the current generation of machines away.

Ingenuous innovation in terms of software control codes permits great flexibility when it comes to defining the print style. A nippy 100 cps of clear Draft text backs up the crisp 20 cps Near Letter Quality text mode, with upto 40 superbly useful downloadable characters. A delightful range of assorted character widths is efficiently supported, with sizes ranging from a broad 5 cpi to petite 17 cpi, EVEN in NLQ mode. Some of the extensive support for serious use includes specialised functions to perform justification, centering and even left and right ranging. Proportional spacing permit even greater freedom when it comes to advanced use. Not only is the full Epson RX control code set implemented, but extra codes have also been added to cater for the NLQ options, etc.

A full 96 ASCII character set is supported, with an extended set of 32 international characters. A 1K Print Buffer alleviates much of the wait time normally associated with printing, whilst the bi-directional logic seeking print head takes the quickest route to print as required.

The draft text is implemented with a 9 x 9 matrix, with Near Letter Quality effected by means of an 18 x 18 matrix.

As an extra special bonus to all Watford customers purchasing the KX-P1080 NLQ Printer, we are currently providing not only 1,000 sheets of fanfold paper completely FREE of charge but also a printer lead to connect the marvellous KX-P1080 to a BBC Micro, absolutely FREE. These gifts alone are worth £15.

Introductory Price: **£165** (carr. £7)
(Price includes 1,000 sheets of fanfold paper and a 4' Printer lead)

BBC MICRO WORD-PROCESSING PACKAGE

A complete word-processing package (which can be heavily modified to your requirements, maintaining the large discount). We supply everything you need to get a BBC micro running as a word-processor. Please call in at our retail shop to discuss your particular requirement and a demonstration.

EXAMPLE PACKAGE

BBC Master 128K Micro, View wordprocessor, Viewsheet, Basic Editor, Terminal Emulator, Twin 800K 40/80 track double sided Disc Drives, Zenith Hi-Res green monitor, Brother HR15LX professional quality Daisy Wheel printer, Gemini Database, Spreadsheet, Beebplot Graphics, Cashbook, Final Accounts, Mailist, Easiledger, Invoice & Statements, and Stock Control packages on disc with manuals.

Only £949

THE EPSON RX/FX/KAGA PRINTER COMMANDS REVEALED

So you bought yourself a new printer, because the salesman in the shop showed you how clever it is and impressed you with all sorts of printouts to show its capabilities - he may even have offered you a special price.

However, now that you have got it home and connected it to your BBC microcomputer, you are wondering how to make it perform these magical tasks. The manual seems to give no clues, and when you type in the example programs, the computer throws the LPRINT statements back in your face.

Now what do you do, when this £400 piece of high technology refuses even to move its head, and you have stayed up until 2 in the morning with copious supplies of coffee, desperately trying to print something out. Once again, Watford Electronics comes to your help with our new book entitled 'THE EPSON FX/KAGA PRINTER COMMANDS REVEALED'.

This book describes in plain, easy to understand English, how to use and make the most of your KP810, Canon PW1080A or any Epson FX80 compatible Printer with the BBC Micro, both from Basic and Wordwise.

It describes in detail how to obtain the maximum in graphics capability from your printer and includes full indexes allowing you to cross index the numerous commands. Every command is explained in detail, with an accompanying BBC Basic program and an example of its use from Wordwise.

Superb Value at **£5.95** (No VAT)

MARK 2 LIGHT PEN

You no longer have to fiddle with the brilliance control or work in the shade as this NEW Mark II Light Pen is totally insensitive to local lighting conditions. It only operates on high frequency light from the TV or Monitor.

The red LED Indicator on the Mk II pen, lights up when valid video data is available. Your program can have access to this signal allowing computer verification of target for high res drawing. The conveniently located switch on the pen body allows the computer to ignore any stray signals. Supplied complete with the sophisticated PEN-PAL Software on Cassette or Disc. Please specify.

Mark II Light Pen **£19**

The ULTIMATE DFSs for the BBC MICRO

WATFORD TOPS THE DFS CHART

Watford's Ultimate DFS has scored highest points in ACORN USER's unbiased DFS's Review of July 1985. In concluding, the reviewer writes "It must be said that Watford's DFS certainly offers a comprehensive range of facilities at a very attractive price". (Please write in for comprehensive details.)

Just compare the features:

WATFORD's & ACORN's SINGLE DENSITY DFS

Watford's popular and widely acclaimed DFS has now been available for three years, and has gained a large following amongst serious users of the BBC Micro. Owners of Acorn or any other standard DFS can upgrade to our "Ultimate" DFS merely by replacing their DFS ROM. See below for this upgrade. (P.S. Watford's highly sophisticated DFS is fully compatible with Acorn DFS).

PRICES

- Complete Disc Interface Kit incl. DFS ROM & fitting instructions **£54**
- Acorn's 0.90 DFS Kit complete **£52**
- DFS Manual (Comprehensive) (no VAT) **£6.95**
(P.S. Our comprehensive DFS Manual covers both Acorn & Watford DFSs)
- Watford's sophisticated DFS ROM only **£16**
- We will exchange your existing DFS ROM for Watford's Ultimate DFS ROM for only **£12**
- DNFS ROM only **£17** ● ADFS ROM only **£25**
- Watford's DFS is exclusively available from Watford Electronics. Every ROM carries a special label with our LOGO and serial number.

WATFORD's DOUBLE DENSITY DFS INTERFACE

The DDFS from Watford Electronics represents a new standard in DFSs for the BBC micro. This is a double density version of our popular single density DFS, and combines all the features of this powerful DFS with the advantages of a system that gives 80% more storage per disc in double density mode. P.S. - Please note that not all DDFSs are capable of providing either the full 80% storage increase, or of allowing a file the full size of the disc - Ours allows both of these! Operates both in Single & Double Density modes.

The typical piece of games software these days is provided upon a protected disc. In order to work on any double density system (including the others on the market) a protected piece of software needs to make calls through the OSWORD & 7F routines. To ensure compatibility, the Watford DDFS features probably the most comprehensive and powerful 8271 emulation ever written for a double density system.

PRICES

- Complete DDFS Kit incl. fitting instructions **£46**
- DDFS Manual (no VAT) **£6.95**
- We will exchange your existing Single Density DFS Kit for our DDFS Unit at **£35**

Watford Electronics DDFS PLUS for the BBC B Plus

The Watford DDFS Plus, written specifically for the BBC B Plus Microcomputer, replaces the 1770 DFS from Acorn. It not only provides BOTH, single and double density operations in DFS mode, but the DDFS Plus also permits the use of an extended catalogue, giving 62 files per catalogue. It also incorporates all those excellent features of the popular Watford DFSs, and more.

N.B. SRAM and Tube functions not duplicated.

DDFS PLUS (for BBC Plus) **£30**
(Price includes comprehensive manual)

MYSTERIES OF DISC DRIVES & DFS REVEALED

Are you tired of faulty cassettes, and lengthy loading times? Do you want to upgrade your BBC micro to take discs but you get tied up in the plethora of jargon surrounding the choice and use of these systems.

For instance, what is the difference between single and double density formats, how can you use a 40 track disc on an 80 track disc drive? What is the difference between a DFS and disc interface kit? Should you acquire a single Disc drive or twin? What does 48 TPI and 96 TPI discs mean? These are just a few of the questions you may have asked yourself and never found the answer or maybe you have yet to encounter these questions.

Now the mystery of buying a suitable interface and disc drive for your BBC micro is revealed in Watford's new book entitled 'MYSTERIES OF DISC DRIVES & DFS REVEALED'. It describes in fine detail, yet remaining very readable to the beginner, how disc drives operate, the type of interfaces available, which type of discs to use on a disc drive and how data is stored on the discs.

£5.95 (Book No VAT)

DISC ALBUMS

Attractively finished in antique brown leather look vinyl. Stores upto 20 Discs. Each disc can be seen through the clear view pocket.

£4

STAK-PAK

The unique computer program filing and storage system. Made of tough black plastic, these compact drawer sections hold two cassettes each and lock together vertically to form miniature cabinets of any height. Each drawer section has two C12 Data Cassettes with labels plus external index card.

Five twin Packs incl.
10 Cassettes Only: **£5**

FLOPPY HEAD CLEANER KIT

The heads in floppy drives are precision made and very sensitive to dirt. The use of a cleaner Kit is a sensible precaution against losing valuable data. It is recommended to clean the drive head once a week. It is very simple to use.

£8

LOCKABLE DISC STORAGE UNITS

Strong plastic case that afford real protection to your discs. The smoked top locks down. Dividers and adhesive title strips are supplied for efficient filing of discs.

M35 - holds upto 40 discs **£9**
M85 - holds upto 95 discs **£11**

PLASTIC LIBRARY CASES

FOR 5 1/4" DISC STORAGE
holds 10 Discs.

£2.00

Quality Disc Drives from Watford

To help you decide which drive is the most suitable for your needs (and your pocket!), we have produced the table below.

The first capacity given in the first column indicates the single density capacity. The double density storage capacity is second one, (that within the brackets). All disc Drive type numbers start with the prefix "C".

The tinting on some of the boxes is used to indicate which Drives are 40 track (non-tinted) and which are 80 track (tinted). Both are of Japanese manufacture.

With two prices in a box (e.g. £295/£299), the first price is for the standard drive and the second for the same unit in switchable type. Users of either of the two Watford DFSs will not need switchable drives as their DFS will provide software switching for them.

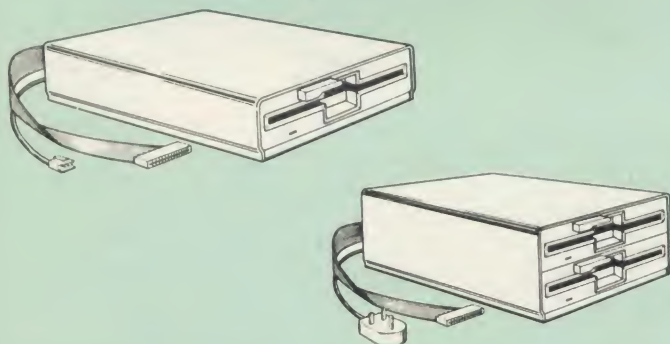

All our Disc Drives (except CLS100) are Double Sided and will operate in both Single and Double Density modes. Extensive experience of the usage of disc drives suggests that the JAPANESE drives currently represent about the best in terms of speed, reliability and overall "elegance" available for the BBC Micro.

Various other "manufacturers" of disc drives for the BBC micro (more accurately, "packagers" label other manufacturers drives with their own name). We buy the high quality Epson and Mitsubishi drives in large quantities directly from the manufacturers, package them and sell them at "dealer" prices direct to the public.

If you look around the popular BBC micro press, you will find that the prices we quote for the top quality, new slimline disc drives are, virtually without exception, some of the best around. These prices, coupled with the backup of one of the country's largest distributors of BBC peripherals provides a superb deal.

Unless you anticipate using dual drives in a fully expanded BBC system for long periods of time with little ventilation, then we suggest that our range of "CL" disc drives without the PSU (Power Supply Unit) would be quite adequate: extensive tests within our workshops have confirmed this. All drives are supplied complete with a SPECIAL UTILITIES Disc, Cables and Plugs. The Drives with power supply have a mains moulded plug for safety purposes. (Ideal for Schools & Colleges. We are now able to supply all single Disc Drives with Power Supply, in either single or dual cases. (Dual cases with a blanking plate, allow easy expansion at a later date.) Prices stated in the pricing box below for single drives in a single case. Single drives with dual cases cost an extra £5. (At Watford we anticipate your needs of tomorrow, not just today!)

When using a BBC Micro, most people find themselves short of space. The Watford's BBC Micro plinths form an ideal way of recovering some of this precious space; your BBC, Disc Drive and Monitor can all occupy the same vertical footprint and still be comfortably situated. With the Watford Double plinth, your Disc Drive is mounted vertically at one side, leaving a very valuable area directly in front of you for such useful items as spare discs, pen, paper, reference manuals, etc. Follow the trend with Watford plinth. (Turn to the 8th page of our advert for the Plinths).

Capacity	Drives without P.S.U.		Drives with P.S.U.	
	Single	Twin	Single	Twin
100K (180K)	CLS 100 £95		CS 100 £116	
200K (360K)	CLS 200 £102	CLD200 £185	CS 200 £116	CD200 £199
400K (720K)	CLS 400 £104 £105 CLS400S	CLD 400 £185	CS400 £123 £124 CS 400S	CD400 £205

ACORN WINCHESTER DRIVES

Suitable for direct connection, via the 1MHz bus, to any BBC running ADFS. These Acorn Winchester disc drives are fast and extremely reliable. Each Winchester comes complete with the Level III Econet File Server software.
10 Megabytes **£1050**; 30 Megabytes **£1549**

CDP 800S

Twin 800K Double sided 40/80 track switchable disc drives mounted in an attractively finished Beige colour plinth for the BBC Micro. Supplied complete with integral power supply, cables and Utilities disc. The switches are mounted on the front panel for ease of use.

Introductory price: **£239**
(Securicor Carr. £7)

Harness the full potentials of your Epson RX & FX Printers. Impress your friends and business colleagues with the quality of your letters and printed material with Watford's very simple to use EPSON NLQI (Near Letter Quality) ROM. Suitable for FX80, RX80, RX80F/T, FX100.

Look at the features:

- Simply type *NLQ80/100 and a single VDU code to use NLQ print.
- NLQ is then available without any modifications from BASIC, WORDWISE, VIEW (with NLQ DRIVER) or virtually any other program or language.
- Single codes select PROPORTIONAL type (yes even on the RX80); ENLARGED type; UNDERLINED type. These features can be used separately or in any combination.
- Full UK character set; Standard 'pica size'; Proportional spacing; Enlarged; Underlined; Normal type.

The NLQ ROM is supplied complete with comprehensive manual.

P.S. NLQ ROM is compatible with the Torch Z80 system and can be used from within the Perfect Writer software.

Only: £25

VIEW PRINTER DRIVER for NLQ ROM

This specially written printer driver has been designed to allow View access to the full features of our NLQ ROM. A must for all VIEW and NLQ ROM users.

£7.00

(Hi-View compatible)

THE NLQ DESIGNER

KAGA KP810/910 and Canon PW1080 are two superb printers, as our many thousands of satisfied customers would surely attest to. One of its particularly strong points is the NLQ option that it offers; perhaps one of the more weaker points is the effort required to design your own custom NLQ font.

Well the solution is here NOW in the shape of Watford's NLQ DESIGNER ROM! For the BBC Micro. This powerful piece of software allows easy design and entry of a full NLQ font, with further fonts recallable from disc. Once a font has been programmed with the versatile NLQ DESIGNER, it can be saved to disc, downloaded to your Kaga (or Canon) printer, or even programmed into an EPROM (given the appropriate hardware) and then plugged directly into your printer so that it is available immediately when you turn it on. Downloadable Fonts require 6264 RAM chip fitted. Now BBC Master compatible.

A 40 or 80 track (please specify) disc containing 3 example fonts is included in the package.

(P.S. This ROM is not suitable for Epson printers.)

- NLQ Designer ROM & FONT Disc **£25**
- Kaga Individual FONT ROMs **£15**

(Write in for further details).

ALL PRICES EXCLUSIVE OF VAT

DUMPOUT 3

A highly sophisticated screen dump ROM. This has to be the most flexible and powerful screen dump ROM yet produced for the BBC micro. It will put on paper anything you see on the screen, including all Mode 7 facilities etc. We have to admit that there is one facility that we cannot replicate - if anyone can supply flashing ink we would like to know!

The ROM also provides window setting utilities and two new OSWORD calls that allow mode 7 graphics pixels to be read and plotted using the standard graphic co-ordinate system. The latest version includes a graphic dump trigger for dumping screens from games whilst they are running.

Two commands are used to operate the dump routines:

*GIMAGE - This provides a full graphics dump of any graphics mode, plus modes 7 and '8'. There are many optional parameters but you need only specify the parameters you wish to change.

Features available include:

- Vertical and horizontal scaling through all the graphic modes and mode 7
- Rotation of the image produced through 90, 180 and 270 degrees
- Left hand indentation setting
- Screen dump window definition
- Colour grey scaling
- Two tone fast dump
- Special colour mask
- Mode 7 contrast expansion
- Mode 7 contiguous dump
- Key triggered dumps
- User port switched dumps

What does the independent press say!

Practical Electronics, May 1985

"The Dump Out 3 ROM from Watford Electronics represents one of the most sophisticated types of printer dump utilities available for the BBC Micro . . ."

"an extremely sophisticated and powerful dump utility".

"VERDICT - Dump Out 3 ROM has all the facilities which you are ever likely to need for producing printer dumps. The facilities available work extremely well and if printer dumps are something which you require, then this ROM can be recommended to help you to get the best out of your dot matrix printer".

The Micro User Feb. 1985.

"Well, here is that winner!"

"provide(s) some rather sophisticated screen dumps. Producing high resolution paper copies of graphic screens in any (graphics) mode will be the major reason for buying this ROM, and this is where Dump Out 3 performs PAR EXCELLENCE". (Our capitals for their italics.)

"The versatility of *GIMAGE (the graphics dump command) when using these parameters is amazing. Pictures of almost any size, shape, contrast or distortion may be produced without the need for a reducing photocopier or trick photography".

"Without reservation I wholeheartedly recommend the Dump Out 3 ROM as the ultimate screen dump facility for the BBC micro. It is easy to use yet highly versatile, and caters for all BBC screen modes in multitone high resolution printing. Whole, partial, rotated and scaled screens may be dumped to almost any BBC compatible dot matrix printer (see our list at the end of this advert). At £25 it must represent excellent value for money and surely cannot be beaten".

Designed for use with the following printers:

GLP, GP80/100/250, CANNON, STAR, KAGA/TAXAN, NEC, SHINWA CP80, GEMINI, EPSON MX/RX/FX, M1009, NEC PC8023, DMP100/200/400, Mannesman Tally etc. Price including comprehensive manual

£25

ROM MANAGER

Probably the most powerful way of expanding the BBC micro is from the use of Sideways ROMs. One problem faced by the avid ROM collector is that of ROM command clashes. The solution is very simple in the form of the ROM that "Provides comprehensive management of all your installed ROMs". (Quote from BEEBUG November '84.)

Basically, ROM Manager offers you the ability to turn off any installed ROM, or to send any * command to any specific installed ROM. It is said that imitation is the sincerest form of flattery - Acorn's BBC Plus features many of the abilities of this powerful ROM.

Many more facilities available.

SPECIAL OFFER £18

THE AMX MOUSE

The AMX Mouse needs no introduction. It is simply the best.

Now supplied with the NEW SUPERART Software ROM & Disc at no extra cost.

ONLY: £65 (carr £1.50)

Price: £50

FLEET STREET EDITOR

Software pack £35

TRANSFEROM

(Tape to Disc Utility)

Not compatible with 1770 DFS.

This advanced and sophisticated utility ROM for the BBC Micro has the following features:

- Fully menu driven for ease of use
- Copes with locked programs
- A very comprehensive built in copying features
- Copies very long adventure games
- Supplied with comprehensive manual

TRANSFEROM is now available in BOTH single and double density versions. The single density version works with both the Acorn and Watford single density DFSs. The double density version works with the Watford DDFS system only.

TRANSFEROM takes your software on tape and saves them onto disc. TRANSFEROM does not stop when one disc is full; you just insert another disc in and carry on with that one! Surely this is the most valuable investment you could make if you have tape software that you wish to transfer to disc! Please specify version required - Single or Double Density.

£25.00

DIAGNOSTICS DISC

The BBC micro is a very complex machine and thus diagnosing a fault can be very difficult. Until now, the only way to discover the nature of a fault was either to find a competent friend with a large degree of patience or to find your nearest dealer and pay him to find out what is wrong.

At Watford Electronics, we realise how difficult it can be when faced with a problem, finding yourself a long way from your nearest dealer, or even just uncertain about your Beeb's health, but not wanting to waste time and money taking it to be looked at.

The solution to these problems is here now, in the form of the Watford's Diagnostics Disc. This excellent utility is specially designed to test out the following areas of your Beeb:

RAMs, ROMs, ULAs, Sound, Keyboard, Disc, RS423, ADC, User Port, Printer Port, Cassette, Joysticks, Speech, Disc Drives, 6502 and Z80 2nd Processors.

This utility is an invaluable aid for all those who take the reliability of their system seriously. A comprehensive manual provides full operating details and a list of possible causes and remedies for any faults that you may find along the way. The package also enables a permanent equipment and service record to be maintained.

Only £20.00

ROMAS

THE CROSS ASSEMBLER AND MACRO EDITOR FOR SERIOUS PROGRAMMERS!

ROMAS is a carefully designed, sophisticated yet simple to use, development system for serious assembly language programmers. Using the BBC as the development system, you can choose your target system from the following processors:

6502, 65C02, Z80, 8085, 8041, 6809 and Z8 P.S. This includes the Acorn 6502 & Z80.

ROMAS features a powerful expression analyser, making complex table easy to generate. To aid in documentation, fully formatted assembly listings may be produced, with full symbol table output at the end.

ROMAS is provided with a powerful cross referencer to produce a listing of all the labels in a given "source" program; this makes it easy to check to see if you are about to duplicate a label.

The Macro Editor

Features of this powerful editor provided with the ROMAS package include:

- Works in all 40 and 80 column screen modes
- Fast load and save speeds
- Continuous line and column number displays
- Search, replace and move; all available in macros
- Command repetition

The ROMAS package includes a comprehensive manual, providing detailed documentation and plenty of examples.

A give away at... **Only £45**

Please specify 40 or 80 track disc when ordering.

ROM-SPELL

"way ahead of any competition"

ROM-SPELL is probably THE most advanced and fastest spelling checker available for the BBC Micro. Printed below are some extracts from a recent independent review (A&B Computing Nov. '85), which we feel sure will convince you that this is THE only spelling checker worth considering.

"The editing system is very neat and simple, instead of replying to queries and beeps all of the time..."

"The other feature which places ROM-SPELL way in front of any competition is the ability to examine the user dictionary, so any spelling mistakes that have found themselves on the disc can be examined and taken out if necessary".

"... that it is compatible with many of the popular word processors on the market is a good indication that ROM-SPELL is going to be a very popular product indeed".

"... ROM-SPELL is by far the best spelling checker for the unexpanded BBC B (with or without word processor). It boasts features which are hard to find on conventional spellcheckers on CP/M and MSDOS, namely Spellstar and has a speed/performance ratio of roughly the same as its CP/M cousin. The difference is that the CP/M version would cost the best part of £500".

"... and with such vital house keeping features as an ambiguous word checker, the ability to edit the user dictionary, a comprehensive manual that is both easy to read and actually ENJOYABLE to learn from, ... I feel confident that ROM-SPELL will woo the word processing public with no problems at all".

Compatible with: View, Wordwise & Wordwise

Don't settle for less. Buy the best.

£25

(Not compatible with 1770 DFS)
(Please state 40 or 80 track disc)

COPY HOLDERS

How often have you been about to type hand written notes into your computer when you find that there's nowhere to rest the paper or that your notes are resting at the wrong angle to read the type? Whether the notes be your latest program or the draft of a new trilogy, the new Manuscript Holders from Watford are superb for holding your paper at the ideal height and angle to allow you read and type in ease and comfort.

Available in desk resting and shelf clamping versions, these two units hold your paper firmly by means of a magnetic ruler and a clip grip.

Mounting to a convenient flat surface, the two joint anglepoise Manuscript Holder allows the paper to be positioned at virtually any convenient angle whilst only taking up a fraction of the surface area that the paper being held does.

The smaller desk resting Manuscript Holder is useful for the more organised desk where the problem is simply holding the paper at the right angle.

Whatever desk arrangement you use, surely you deserve a Watford Manuscript Holder!

Amazing value at only
Desk Top **£10** (carr. £2)
Angle poise **£14** (carr. £3)

All prices in this advert are exclusive of VAT.

REPLICA 3

This new improved REPLICA 3 from Clares is a very powerful disc based TAPE to DISC Utility. It now transfers even more programs than ever before. Replica 3 will not work with all programs but then neither will anything else. 30,000 Replicas have been sold to date. It has to be good.

£13 (40 or 80 track)

BEEBMON

The most powerful machine code monitor for the BBC Micro **£24**.

DISASSEMBLER ROM

ONLY £16

THE INVESTIGATOR

This sophisticated Utility program on disc, enables you to make security back-up copies of most of your valuable Disc Software. Makes full use of all 8271 (will not run with double density DFSs) facilities to discover the precise format of your protected disc so that an exact copy can be produced. Supplied with detailed instructions. Please specify 40 or 80 track disc when ordering.

Only £20

Continued

SIDEWAYS ZIF SOCKET

Allows you to change your ROMs quickly and efficiently, without opening the lid. The ZERO INSERTION FORCE (ZIF) socket is located into the ROM Cartridge's position.

- Very simple to install. NO SOLDERING required. The ZIF (Zero Insertion Force) eliminates the possibility of damage to your ROM pins when inserting & extracting.
- The low profile of the socket allows unrestricted access to the Keyboard.
- All data and address lines are correctly terminated to ensure correct operation of suitable ROMs with the BBC micro. We also supply a purpose designed see-through storage container with anti-static lining, allowing you to store up to 12 ROMs, protecting them from mechanical and static damage.
- This versatile hardware solves the problem of running out of socket space. Simply lift the ROM from the ZIF & insert a different one (No pulling or pushing of Cartridges. It is a must for all professionals and Hobbyists alike.)
- BBC, B+ and Master compatible.

ONLY £15 (carr £2)

Low Profile CARTRIDGE SYSTEM

Complete System consists of: Low profile ROM Cartridge, Socket housing, Cable assembly, 5 labels and a library storage rack.

Complete System **£12**
Spare Cartridges **£2.50**
Spare Rack **£1.50**

16K Sideways RAM Modules

This is it! The revolutionary design RAM Module you've been waiting for. Complete with such features as read and write protection, these new modules from Watford Electronics are ideal for the hobbyist, software developer and ROM collector.

Key points to note about this new addition to the Watford range of products are:

- Write protection (useful in a variety of circumstances).
- Read protection (allows recovery from ROM crashes).
- Compact construction.
- May be fitted in systems even with a ROM board.
- Multiple units may be fitted, even with a ROM board.
- No overheating or overloading problems.
- Free utilities disc supplied.
- Can be used as a 16K PRINTER BUFFER.
- Ideal for professional software development.
- Supplied with utilities software disc.

Only: **£29 (carr £2)**

Optional extras

READ and WRITE protect Switches **£2** each
Battery for Battery Backup **£3**

All prices exclusive of VAT

This is the RAM you've been waiting for! This battery backed up, write protectable 16K sideways RAM board allows you to run from disk every sideways ROM available. Beware of other sideways RAM boards which are not backed up as certain ROMs will not run in these boards even though the RAM can be write protected. The Battery Backup facility allows retention of DATA after power off. On switch on the Micro will think the WATFORD DISC RAM is a ROM. Features available are:

- No soldering or modifications to BBC micro necessary.
- Plugs into normal ROM socket fitting neatly under the keyboard allowing room for other add-ons.
- Easy to use. Comes with disk based software to SAVE and LOAD ROMs. Allows you to make backup copies of your ROMs.
- Disk software can be copied onto other discs when disc is full.
- No messy plugging and unplugging of your ROMs. Simply Load the one you want into DISC RAM.
- Ideal for Professional users to develop ROMs. Backup facility allows testing of final versions without using EPROMs.
- The switch provided allows backup and write protection to be switched off externally.
- Can also be used as 16K printer buffer RAM in conjunction with our Buffer & Backup ROM.

New Low Price: £30 (carr £2)

P.S. 16K DISC RAM Board is not designed to work in conjunction with a Sideways ROM Board.

SOLID STATE 16K SIDEWAYS RAM

This new unit from Watford, which utilises the latest in Static RAM technology, offers 16k of easy-fit sideways RAM in a very compact unit with a footprint no larger than a standard 28pin EPROM. With only a single flying lead terminating in a mini hook-on probe, to fit, (no soldering required) this compact unit works with any BBC Micro with or without a ROM board. **Compatible with BBC B Plus.** Like our other 16K RAM Modules, this unit is very simple to fit.

Only **£28 (carr 2)**

Supplied complete with comprehensive software on Disc, Operating and fitting instructions.

Do you find the 16K Sideways RAM Units confusing? If so, we have compiled this quick questionnaire to help YOU decide which is the best one for you. If the answer to any of the questions is yes, then use the index number to select from the boards below. Options in brackets indicate possible secondary choices.

Do you require:

- Sideways RAM for a BBC B? Choose 1, 2 or 3.
- Sideways RAM for the B+? Choose 3.
- A small, basic module? Choose 3.
- A sideways RAM module for a ROM board? Choose 1 or 3.
- An easy to use utilities disc? Choose 1, 2 or 3.
- More than one module installed at once? Choose 1 or 3.
- To use sideways RAM as a printer buffer? Choose 1 or 3.
- Battery Backup? Choose (1) or 2.
- Write protect for RAM (makes ROM look like RAM)? Choose (1) or 2.
- Read protect (allows recovery from crashes)? Choose 1.

Key:

- 1) 16k Sideways RAM Module
- 2) 16k Disc RAM
- 3) Solid State 16k Sideways RAM

SOLDERLESS SIDEWAYS ROM SOCKET BOARD

In the May 1986 Micro User's independent review, the writer concludes, "The board has been well laid out. Its position is much better than others - not over the HOT RAM chips and further away from the disc controller area". "I give the solderless ROM board the thumbs up and wish it success".

This brand new board from Watford Electronics is designed specifically for those wishing to add a ROM board to their own BBC without the need to perform any soldering.

This new board expands the total possible number of ROMs in a BBC from 4 to 16. Also permissible, are various configurations of RAM (up to 16k) and different sized EPROMs (see below).

Unlike our competitors inferior boards, the ONLY upgrade required for fitting battery backup to the Watford Solderless ROM board (all Watford ROM boards, actually) is the fitting of the battery itself. (No other expensive components are required.)

- The key features of this new, no fuss, easy to install quality product from BBC leaders Watford Electronics are as follows!
- Increase your BBCs capacity for ROMs from 4 to 16.
- **No soldering required.**
- Very low power consumption.
- Minimal space required.
- Compatible with Torch, DDFS, RAM Card, 2nd Processor, etc.
- Socket 14 can take the following chips: 2716, 2732, 2764, 27128, 6116, 6264.
- Read protect to make RAM "Vanish"; allows recovery from ROM crashes.
- Battery backup option for RAM chips.
- Supplied ready to fit with comprehensive instructions.

Price: Only £32
Battery backup fitted **£36**
(carriage £2)

Watford ROM/RAM CARD

A must for all serious users

Watford Electronics announced the first ever commercial ROM board for the BBC micro, the Watford Electronics 13 ROM Socket Board 3 years ago. Following the success of this board, we have designed what probably represents the ultimate in expansion boards, the new Watford Electronics ROM/RAM board. This highly versatile and sophisticated board represents the latest in "2nd generation" sideways ROM technology for the BBC micro, designed to satisfy the serious BBC user.

- NO SOLDERING required to fit the board.
- NO overheating problems.
- No User Port corruption (avoids problems with the mouse, modems, Eprom Programmers, etc.)
- Fully buffered for peace of mind.
- Firm mounting in BBC micro.
- Compatible with all BBC micros (not BBC+ or Master).
- Total number of ROMs increased from 4 to 8.
- Up to 8 banks of sideways RAM (dynamic).
- Option for 16k of Battery backed CMOS RAM (CMOS RAM needs one ROM socket).
- Software Write protect for ALL RAM.
- Read protect for CMOS RAM (ALLEVIATES crashes during ROM development).
- Separate RAM write register (&FF30 to &FF3F).
- Automatic write to currently selected RAM socket for convenience.
- Accepts any ROM.
- FREE utilities disc packed with software.
- Compatible with our DDFS board, 32k RAM Card, Delta Card, sideways ZIF, etc.
- Large printer buffer.
- UNIQUE Fully implemented RAM FILING SYSTEM (similar to the popular Watford DFS).
- ROM to RAM load and save facilities.

The SFS (Silicon Filing System) can utilise up to the full 128k of RAM (with the SFS in any paged RAM) as a SILICON DISC. This behaves as a disc drive, with all the normal Watford DFS features (including OSWORD & 7F for ROM-SPELL, etc.) to provide an environment that looks like a disc but loads and saves MUCH faster.

The ROM/RAM Board plugs into the 6502 CPU socket. This leaves free all the existing ROM sockets, which can still be used normally.

Any ROM that can be plugged into the BBC micro's own ROM sockets may be used in the ROM/RAM Board.

The ROM/RAM Board is supplied with all ordered options fitted as standard. Upgrade kits (with full instructions) are available for all of the options, should the user wish to upgrade in the future. Please write in for further details.

INTRODUCTORY PRICES:

- ROM/RAM card with 32k dynamic RAM **£45**
 - ROM/RAM card with 64k dynamic RAM **£65**
 - ROM/RAM card with a massive 128k dynamic RAM **£99**
(carriage on ROM/RAM Card £3)
- OPTIONAL EXTRAS:**
- 16k plug-in Static RAM kit **£6**
 - Battery backup **£3**
 - Read and Write protect switches **£2 each**
- Complete ROM/RAM board (all options installed) **£115**

Le Modem

The MODEM from Watford

At last a professional MODEM for the BBC Micro. Unlike other 'Modem packages' this is a complete package there are no extra software costs to get 'up and running'. Of course Le MODEM is multi-standard, i.e. 300/300, 1200/75 & 75/1200 UK and BELL (USA) are all supported.

The features that make Le MODEM such good value are:

- A complete communications terminal that transforms your BBC Micro into a very powerful Worldwide data transfer system.
 - Auto Dials, Auto Answers, and is completely controlled by your Micro. There are no external controls!
 - Allows you to access PRESTEL, B.T. GOLD, THE SOURCE, MICROLINK, MICRONET, MICROWEB, THE TIMES NETWORK, MICRO LIVE (BBC TV database), CITY BB and more.
 - Designed to be SIMPLE but SOPHISTICATED. To LOGON to a data base all you have to know is its TELEPHONE NUMBER, Le MODEM does the rest.
 - Supplied with a comprehensive telecomms package in a 16K sideways ROM which includes a FULL PRESTEL terminal allowing TELESOFTWARE to be downloaded.
 - A comprehensive 80 column terminal. This includes XMODEM error checked transfer protocol, to allow error free data transfer anywhere in the world!
 - FULLY controlled by simple *COMMANDS allowing you to control it from your own BASIC programs. To get you started we supply a FREE disc of bundled software!
 - Connects to the 1MHz bus. A *AUDIO ON/OFF command allows you to actually hear the telephone line through your BBC micro loudspeaker.
 - Completely self contained with internal mains power supply. (Even a free mains plug is fitted!) A *TEST facility gives ON SCREEN indication that Le MODEM is working correctly.
 - Packaged in such a way that you need nothing else except a BBC Micro to communicate with computers all over the world.
 - FREE 3 months subscription to MicroLink.
- BT Approval applied for.

Price: **£89**
(carr £3)

PROHIBITED from direct or indirect connection in any telecommunication system run by British Telecommunications. Action may be taken against anyone so committing this offence.

(Price includes, Le Modem, Software ROM, Cables & Comprehensive Manual)
(Write in for further details)

Nightingale Modem

SPECIAL PRICE to our Customers

4 Way BT Plug	£0.75

Versatile BEEB SPEECH SYNTHESISER Unit

The Watford Speech Synthesiser is a very flexible speech synthesis unit based upon the powerful phonemes system. This system stores the building blocks of speech (called phonemes) and allows you to combine them quickly and easily to form virtually any word imaginable.

Supplied with an advanced ROM, you are provided with a 500 word dictionary to get you started. These can easily be added to by following the notes given in the comprehensive manual.

SPECIAL PRICE £32 (carr £2)

PLINTHS FOR BBC MICRO, MASTER & PRINTERS

Protect your computer from the weight and heat of your monitor. The BBC micro plinths have slots for maximum ventilation. The single plinth is suitable for a BBC and monitor, whilst the double height version provides enough room for our stacked or side-by-side dual disc drives or TORCH Disc pack, to be placed in the centre section. If you use our stacked drives, the remaining space can be used for further peripherals e.g. Speech Synthesizer, EPROM programmer or simply stationary. The computer slides neatly in to the lower section allowing easy access to remove the lid. The printer plinth is equally sturdy but without the cooling slots. It allows for access to the paper from the front as well as from the rear. (a facility not often thought of in similar products) if the paper is located beneath the plinth. This is a very convenient way to work especially if your work area is not deep enough to take the printer and paper separately.

SINGLE BBC PLINTH	£11 (carr. £1.50)
DOUBLE BBC PLINTH	£20 (carr. £2.00)
PRINTER PLINTH	£10 (carr. £1.50)
SINGLE MASTER PLINTH	£14 (carr. £1.50)
DOUBLE MASTER PLINTH	£25 (carr. £2.00)

Wordwise plus

£40

We are giving away absolutely **FREE**, the superb Word-Aid ROM worth £24, with every WORDWISE PLUS package bought from us.

Word-Aid

The most comprehensive utilities ROM for Wordwise-Plus

Extend the power of your Wordwise Plus word processor with this most advanced ROM from Watford. By utilising the powerful Wordwise Plus programming language, WordAid provides a whole host of extra features, all accessed via a special new menu option. This ROM has been personally approved by Mr Charles Moir, the author of WORDWISE PLUS.

- Alphabetical sorting of names and addresses.
- Text transfer options.
- Chapter marker.
- Epson printer codes function key option.
- Search and display in preview mode.
- Embedded command removal.
- Print Multiple copies of a document.
- Multiple file options for print and preview.
- Address finder.
- Label printer.
- Mail-merger.
- Number/delete/renumber.
- Clear text/segment area.
- BBC B, B+ and Master compatible.

Only £24

(N.B. Word Aid requires a Disc Interface in your Micro)

HI-WORDWISE-PLUS

Supplied on disc. This version requires a WORDWISE-PLUS ROM to be present in the machine. It gives up to 44k of text space on the 3502 2nd processor.

32K SHADOW RAM- Printer Buffer Expansion Board

A MUST FOR WORD PROCESSING

Watford Electronics now brings you the latest state-of-the-art MEMORY EXPANSION BOARD for your BBC microcomputer. Don't throw away your BBC B for a BBC B+ or BBC Master. Just plug the ribbon cable into the 6502 processor socket, and fit the compact board inside the computer. Immediately you will gain not 16K or even 20K, but a massive 32K of extra RAM!!!

● IMPROVE your WORD PROCESSING system, whether disc or cassette based. Don't wait for a slow printer - type in text while printing. TWO JOBS DONE SIMULTANEOUSLY and £100+ saved on a printer buffer.

● "VIEW" Wordprocessor users can now type in letters in 80 columns and have up to 28,000 bytes free - 5 times as much as normal.

● In WORDWISE (or WORDWISE-PLUS), preview in 80 columns with the full 24K of text in memory. This product is recommended as an ideal complement by Computer Concepts.

● Combine GOOD GRAPHICS and LONG PROGRAMS. Use the top 20K of the expansion RAM as the screen display memory, leaving all the standard BBC RAM free for programs. Benefit from MODE 0/1/2 graphics and 28K of program space.

● Use the FULL 32K or the bottom 12K of the expansion RAM as a PRINTER buffer for PARALLEL or SERIAL printers, sound channels, RS423 etc. Print large text files while running long graphics programs, and have all your buffer options available as well (*FX15,21,138,145,ADVAL etc). Please note only a 12K printer buffer can be used with Wordwise or Wordwise-Plus, due to the way they are written.

● Ensure COMPATIBILITY with a vast range of hardware (including our ROM board, the ATPL ROM boards, double density boards, second processors), and software (including BASIC, TOOLKIT, VIEW, WORDWISE (1.20+), WORDWISE-PLUS, Music 500's AMPLE). This is because our board, unlike those of our competitors, is connected to the computer by a ribbon cable and has the power consumption of a couple of ROMs!

● Achieve EASY OPERATION with ROM based software. A large range of commands is available for machine code and BASIC users, including some useful *HELP messages, and a comprehensive manual is supplied free.

● Unique facility to turn ROMs off and on again. Unlike all other ROM managers, this feature does not use 'unofficial' memory. Two bytes of normally user-inaccessible memory on the RAM card are used to ensure ROMs are disabled WHERE OTHER ROMS FAIL.

Only: £59 (carr £2)

(Price includes a comprehensive manual and the ROM)

INCREDIBLE WORD PROCESSING DEAL !!!

Watford Electronics, already renowned for quality products at discount prices, are offering, the truly spectacular BARGAIN OF THE YEAR!

A Watford's 32K RAM Card (offering printer buffering and shadow screen RAM facilities) with the well known WORDWISE PLUS Word processor.

32K Shadow RAM Card/Printer Buffer and Wordwise Plus (a very powerful package) for the absolutely astounding price of:

Only £75 (carr £2)

(P.S. For an extra £14, we will include Word-Aid ROM package for the Wordwise Plus, if bought at the same time.)

ARIES CORNER

Aries Computers was the first company to commercially market what is now known as SHADOW RAM. As part of its continued expansion policy, Watford Electronics is proud to announce that the Aries range is now available exclusively from Watford Electronics and their dealers.

The Aries range, designed by experts offers you the solution to your upgrade nightmares. All the Aries products are compatible with double density disc controllers, modems, second processors, ECONET, hard discs, EPROM programmers and of course, other members of the Aries family and most of the much wider Watford family (some products advertised here perform identical functions and hence cannot be used together). Several major companies now test all their products to ensure compatibility with the Aries B20 & B32.

In quality of construction, the Aries range sits alongside the Watford range in setting a standard against which others are judged. Custom made connectors eliminate the damage to the BBC machine caused by inferior products.

The Aries B-32 Shadow RAM Card

18 months of intensive research and development have produced a worthy successor to the widely acclaimed Aries-B20; the revolutionary Aries-B32. This 'second generation' expansion board features 32k of RAM and a 16k ROM socket.

Like the BBC B+, the B32 provides 20k of shadow screen RAM and 12k of sideways RAM. Unlike the B+, the B32 has simple software commands which allow the user to reconfigure the RAM as 16k of shadow RAM and 16k of sideways RAM, or all 32k as sideways RAM.

With the B32, the programmer gets up to 28k of RAM available for Basic, Logo, Comal, Forth, Lisp and BCPL programs in any screen mode. The business user gets extra memory for View, ViewSheet, Wordwise Plus and many other applications. For advanced applications, the scientific user gets access to a massive 47k of data storage using the Acorn approved *FX call.

Sideways RAM enables you to load sideways ROM images from disc, allowing you to have a large library of sideways ROMs (subject to the copyright holder's permission) stored on disc. The B32's sideways RAM can also be used to extend any operating system buffer (such as the printer buffer) or to load tape programs into a disc system.

The B32 simply plugs into the processor socket on your BBC micro - no flying leads to connect and no soldering. Provision of the on-board ROM socket means that the Aries-B32 control ROM does not use up one of your existing ROM sockets.

Price: B-32 £80 (carr. £2)

Aries B-12 Sideways ROM Board

This board is extremely well made, simple to install, reliable when fully loaded and compatible with the Aries B-20 and the Aries B-32. For the business user or educationalist, the compact and secure internal fitting is ideal, with the ROM board tucked neatly inside the lid where it will not cause overheating problems. The serious software developer and the hobbyist may prefer to mount the board externally, giving instant access to the sockets for experimental purposes. A zero-insertion force (ZIF) socket may be fitted to the board to enhance this mode of operation. The B12 provides a total of twelve

sideways ROM sockets (the four in the original machine are replaced by the twelve on the board), all fully accessible by the MOS sideways ROM system. In addition, there are two sockets for sideways RAM, giving up to 16k of RAM using 6264 static RAM chips.

The B12 system consists of two parts: a large detachable 'mother board' which carries the extension ROM sockets and a small 'base board' on a short ribbon cable, which plugs into the existing sideways ROM sockets. This two-board design eliminates the reliability problems previously associated with some other ribbon-cable based systems.

If you do not have an B32 or B20, a small adaptor module (the Aries B-12C) is available at a nominal cost. The 6264 static RAM chips used to provide the sideways RAM are advertised elsewhere in our advert.

Price:
Aries B-12 £40. Aries B-12C £5

THE ARIES B-488 IEEE-488 INTERFACE UNIT

The Aries-B488 is an interface unit to enable the BBC micro to control and monitor IEEE-488 bus systems. The IEEE-488 bus (also known as the 'GPB' or 'HP-IB') is the standard method of interconnecting programmable laboratory instruments and control equipment. Using the B488, up to 15 devices may be connected in a single high-speed data network.

Aries B-488 Unit: £238 (Carr £3)

THE ARIES RANGE HARDWARE REQUIREMENTS

Aries B-32 - BBC B, MOS 1.20, hardware plugs into CPU socket.

Aries B-12 - BBC B, MOS 1.20, hardware plugs into all four sideways ROM sockets and connects to the B32 or the B20. The adaptor Aries B-12C module is necessary where these are not fitted.

Aries B-488 BBC B, MOS 1.20, Hardware plugs into 1MHz Bus.

النور ARABIC ROM for the BBC Micro

The ALNOOR ARABIC ROM converts your BBC into a bilingual computer. New keytops provide both English and Arabic symbols. Two sets of Arabic symbols are provided for use in either context sensitive or insensitive operation.

20, 40 and 80 column operation. Compatible with ASMO (449). English/Arabic printer interface software. Numeric entry from either left or right of number. Communications software to send or receive 7 or 8 bit data.

Different shapes of Vowels (e.g. Shadda, Fatha, etc). Different shapes of Hamza. Full English and Arabic character sets with all special characters.

£85

(Price includes Alnoor ROM, Operating Manuals & a full set of Arabic/English Keytops)

OFFICE MATE

Database - Set up a computerised 'card index' system and add record/data to the file your way. Features include search, sort, mathematical calculations, printer routines, data summaries, etc.

SPREADSHEET - Offers a wide range of invaluable calculation and editing features. Beebplot will take files created by Beebcalc to provide data portrayal in graph, histogram or pie chart format.

BEEBLOT - Provides an easily assimilated visual representation of numerical data.

WORDPROCESSOR - Provides many routines found in large and expensive packages.

OFFICE MATE Only £10
(Cassette or Disc)

OFFICE MASTER

CASHBOOK - A complete 'Stand Alone' accounting software package for the cash based sole trader/partnership business. It is designed to replace your existing cashbook system and will provide you with a computerised system complete to trail balance.

FINAL ACCOUNTS - Will take data prepared by the Cashbook module and produce a complete set of accounts as following: Trial Balance with inbuilt rounding routine; Notes to the accounts; VAT Summary; Profit & Loss A/C; Balance Sheet.

MAILIST - A very versatile program. Enables you to keep records of names and addresses and then print, examine, sort and find them, all with special selection techniques.

EASILEDGER - A management aid software tool designed to run alongside an existing accounting system. Essentially a Debit/Credit ledger system which can handle sales, purchase and nominal ledger routines to provide instant management information.

INVOICES & STATEMENTS - Greatly reduces the time and cost of preparing Invoices and Statements by storing essential information like customer names, addresses and account numbers. Has VAT routines and footer messages facility.

STOCK CONTROL - Allows you to enter stock received, stock out, summary of stock items and current holdings together with details of total cost, total stock value, current gross margin, cost of bringing stock to minimum level, units in stock ordering, quantity and supplier detail.

All this for only £21
(Cassette or Disc)

Money Management

This disc based software allows individual transactions to be stored and retrieved for upto 5 Bank a/c and 5 Loan accounts.

Price: Only £11

L.B.O. Rom

Life & Business Organiser

Use LBO to organise your life from today until 1999! It can handle literally hundreds of multi-line messages, as many as you are ever likely to need. Despite the very wide range of facilities offered, this professional program is VERY easy to use and requires absolutely NO knowledge of computers. A vital aid to your everyday life, LBO is GREAT FUN to USE!

EPROM PROGRAMMER

The Watford Electronics' EPROM programmer for the BBC micro is a high quality self contained package. Programs all popular EPROMs from 2K to 16K: 2716, 2516, 2532, 2564, 2764 and 27128. All manufacturers' specifications have been followed to program EPROMs at the correct speed - wrong timings could destroy your EPROMs. The unit has its own power supply so does not put heavy loads on the BBC power supply as do some other units. Connects directly to the 1MHz bus following all Acorn recommendations on addressing and bus loadings.

SOFTWARE PACKAGE

The software is supplied on an EPROM which plugs into the Micro and is instantly available with a single command (no time wasting as on Cassette/disc loading). It is a fully purpose designed and integrated package to simplify ROM development. The system is menu driven with many prompts to avoid any accidents.

Software facilities include:

Load File - Save File - Down Load EPROM - Program EPROM - Verify - Blank Check - Editing of memory contents prior to programming.
Also included is an automatic system to allow Basic programs to be put in EPROM and accessed through the *ROM filing system. More than one program may be put in an EPROM. All these facilities and more are explained in the comprehensive and clear 15 page manual.

SPECIAL OFFER £69 (£3 carr.)

TEX EPROM ERASERS

EPROMs need careful treatment if they are to survive their expected lifetime. Over erasure of EPROMs very rapidly turns them into ROMs! The TEX erasers operate following the manufacturers specifications to give the maximum possible working life by not erasing too fast. We use these erasers for all our own erasing work.

- **ERASER EB** - Standard version erases up to 16 chips. **£28 (carr £2)**
- **ERASER GT** - Deluxe version erases up to 18 chips. Has automatic safety cut-off to switch off the UV lamp when opened. **£30 (carr £2)**
- Spare UV tubes. **£9**

BEEB VIDEO DIGITISER

Using any source of composite video (colour or monochrome) and the Watford Beeb Video Digitiser, you can convert an image from your camera into a graphics screen on the BBC Micro. This uses the full graphics capacity of the BBC micro in modes 0, 1 or 2. The video source may be a camera, video recorder or television, and is connected via the video output socket.

Images produced can be compressed, stored to disc, printed on an Epson compatible printer, directly used to generate graphics, analysed for scientific and educational use or converted to other formats e.g. Slow Scan TV or receiving a picture from a remote camera using a modem.

The output from the digitiser exactly matches the graphics capability in each mode, with up to 8 levels of grey in mode 2. The unit connects into the User Port and automatically scans a complete picture in 1.6 seconds.

Both the black and white levels can be adjusted manually for the optimum picture, or switched to automatic for unattended use. The image produced can be reversed if necessary.

Full controlling software is supplied on a normal sideways ROM and this is easily accessed via additional * commands. The package is designed to allow easy input of complex screens and give full access of the data to the user. Once on the screen, the image can be used as a normal graphics screen, allowing any of the usual graphics commands in BASIC or other ROM's to work on it.

A special print dump routine is included with the driver programs. This is specially designed to produce a fast, correctly proportioned picture, with reduced "contouring", resulting in an accurate reproduction of the original image.

Detailed examples of driving this unit from BASIC or other languages are all provided in the extensive manual supplied.

£110 (Carr. £3)

(Price includes: Digitiser Unit, Software in ROM & a Comprehensive Manual)
(BBC B+ and Master compatible, except Master with Econet)

Magazine Maker

(As seen on TV)

A combination of the AMX Pagemaker and Watford's Beeb Video Digitiser.

Using any video that provides a composite signal and the digitiser, images from a camera or TV can be converted into a graphics screen on the BBC Micro.

They can then be used within AMX Pagemaker to illustrate magazines or newsletters - in fact anything that needs to be created on A4 size paper.

With Pagemaker's many features, a variety of pictures can be composed - the only limit being the imagination.

Pictures can be doctored using Pagemaker's graphics option to produce any number of effects.

Text can be formatted around the digitised photo on screen using the facilities available, which include 16 typefaces, character and pattern definer, text formatting and the ability to load in wordwise and viewfiles plus much more.

Once created the picture can be printed out. The Magazine Maker is suitable for any use that requires illustrated documents.

Complete Package £129.00 (carr. £3)

VOLTMACE JOYSTICKS

Delta 3B Single Joystick	£10
Delta 3B Twin Joysticks	£16

ROM EXTRACTION TOOL

This extremely useful tool allows you trouble free chip removal from your computer by distributing the removal force over the whole body of any 24 or 28 pin chip.

Price: **£2**

SURGE PROTECTOR Plug

Fitted in place of your normal mains plug, this device protects your equipment against mains surges. Nearby lightning strikes, thermostats switching and many other sources put high voltage transient spikes on to the mains. This can lead to data corruption in memory and on disc and can result in spuriously crashing machines. A must for every computer user.

Protection for only **£8.75**

ATTACHE CARRYING CASE for BBC Micro

The Attache carrying case is attractively finished in mottled antique brown leatherette. The case is made of tough plywood, providing a very solid and safe way to carry your BBC micro. There is room provided to fit all the leads necessary behind the computer and manuals in the front. Locks supplied with two keys. Price **£13** (£2 carr.)

Does it make sense to buy a disc drive . . . and load most of your programs from Tape?

In a world where time is money and delay is frustration, the **REPLAY** System can bring taped software into the disc era. There is no other way of transferring software to disc that is so effective and efficient as **REPLAY**. Thousands have now been sold and acclaimed by the users as indispensable.

REPLAY is more than a transfer utility . . .

REPLAY captures the computer's memory and stores it in disc form at virtually any point, whether the original program has been loaded from tape, disc or personal endeavour.

REPLAY can reload a selected screen from disc, ready for printing out to a hard copy.

REPLAY can effect a simple 'pause' or save a partly completed program to disc for later use.

REPLAY is 'encoded' in order that programs transferred to disc are individual to, and can only be run by, the same computer.

Get more enjoyment and action out of your software with the **REPLAY** System.

Easy to fit with no soldering, uses one sideways ROM socket with three simple connections in to the computer.

REPLAY must be matched to the DFS IN USE:

R8271 - Acorn 8271, also S.D. Watford and Pace DFS.
R8272 - U.D.M. DFS
R1770 - Opus 3.45 DFS and Solidisk Issue 1.
R1770A - Acorn 1770 DFS and ADFS, also Solidisk Issue 2.
R1770B+ - for BBC 'B' only.
R1770W - Watford DDFS only.
R2793 - Opus 3.35 only.
R8877 - Cumana QFS.
R1770C - Opus Challenger only.
R2791 - Opus 3.15 only.
(Acorn 'Master' in preparation).

Price **£35.00** (incl. VAT), with full instructions for installation and use

Further details and reviews available

New product "Master" Write-Protect Switch. A small module that fits inside the Master computer which enables you to write-protect the Sideways RAM banks. Available NOW priced at **£8.95** inc. **NEW RELEASE** "B+" to "B" conversion kit for increasing the number of programs usable on a B+. POA. For further details or supply contact:

or through your local Dealer

The Matrix ROM

The **MATRIX ROM** is an essential tool for Science and Mathematics Departments in schools, for Science, Computing and Engineering Departments in Universities and Polytechnics, and for anyone who writes serious programs for industrial applications. Written with the cooperation of the Civil Engineering department of Southampton University.

The **MATRIX ROM** provides a comprehensive range of commands for performing matrix operations (including inversion). One of the many commands will solve a set of linear simultaneous equations, and another deals with sets of banded symmetrical equations. In addition there are commands for deleting and redimensioning arrays (to re-use valuable memory space), for finding maximum and minimum values in any row or column, and for inputting, saving, loading and printing arrays. All commands are executed in machine code much more quickly than is possible in **BASIC**. Many lines of coding can be eliminated and much memory space can be saved.

These facilities transform the capability of the BBC Micro when dealing with tasks such as graphical transformations in two or three dimensions, or structural analysis, electrical circuits or vibration problems. In fact any problem where matrix operations or linear simultaneous equations are involved. The power of **FORTRAN** can now be combined with the simplicity of **BASIC** and the excellent graphics of the BBC micro.

Suitable for the BBC 'B', 'B+' and ELECTRON COMPUTERS

£36.00 (plus VAT), includes comprehensive Manual

Quantity discount offered to Educational Establishments

MICRO-TRADER

INTEGRATED SALES PURCHASE AND NOMINAL LEDGERS

Designed for business use by a business man programmer. MICRO-TRADER is a fully integrated program in which all **Sales and Purchase Ledger** transactions are automatically updated to the **Nominal Ledger**.

MICRO-TRADER offers full Sales and Purchase ledger facilities including **SALES INVOICE** and **STATEMENT PRINTING** with a capacity of **450 accounts** and **3000 transactions per month in each Ledger**.

Normal Income Expenditure, Assets, Liabilities & Journal Posting in the Nominal Ledger with full Reporting for individual accounts, Audit Trail, Trial Balance, Profit & Loss and Balance Sheet.

This suite is the only accounts package a real business needs to keep, maintain and finalise its accounts. If you are seriously in business consider how much time and money you spend and lose because you are not an accountant. You are a businessman and so am I. You have a computer and so have I, all you need is MICRO-TRADER to let you get on with running your business. I have already got it.

MICRO-STOCK would be an asset if you purchase goods in your business. It is a **Stock Control** program, fully integrated with MICRO-TRADER. **4000 Stock Items with user defined codes. Invoice and Credit Notes and Cash Sale routine. Full Stock Held Reports.**

If you have staff let EXTENDED PAYROLL solve the wages problem. We have been supplying payroll programs for a year longer than anybody else for the BBC and people trust us.

MICRO-TRADER £200 - MICRO-STOCK £95.00 - EXTENDED PAYROLL £49.95 (+ VAT)

Ring **Colin Chaffield**, Fellow of the Institute of Analysts and Programmers for more information. He will be pleased to advise which, if any, of these programs you need.

To the trade: If you are interested in selling the best business programs for the BBC you could do worse than ring us.

AUTHORISED ACORN DEALER

HARDWARE

AMB15 BBC MASTER 128	£395.00
* 128K * Complete with View, Viewsheet, A Basic editor, Termulator, ADFS, 1770 DFS and Basic * Battery backed up RAM * Two ROM cartridge sockets * Numeric keypad	
ANB55 BBC B+ 128K	£385.00
* 64K BBC Basic * Sideways RAM * 1770 DFS	
ANB03 BBC B INC DFS	£299.00
* 32K computer * Includes Acorn DFS	
ADC06 TURBO UPGRADE FOR MASTER	£120.00
* 65C102 second processor * 4MHZ * 64K RAM * Hi-Basic * Hi-Editor * Printer buffer software	
PTC5000 MUSIC 5000	£140.00
* Compatible with BBC B, B+ and Master * Complete with Ample on ROM * Multi user-friendly input modes for ease of use * 16 channels * Includes a step-by-step beginners guide	
ADF13 ROM CARTRIDGE	£13.00
* Takes existing ROM software in cartridge form * Cuts down opening of machine to insert ROMs	
ANB28 1770 DFS UPGRADE FOR BBC B	£39.00
* Allows BBC to access disc drives * Will take ADFS for double density	
ANB29 ADFS ROM FOR 1770 OR BBC B+	£23.00
* For use with BBC B+ * For BBC B with 1770 DFS kit * Double density * Hierarchical filing structure	
ANB27 64K UPGRADE KIT FOR B+	£35.00
* Upgrades B+ to 128K * Sideways RAM	
ANC06 32016 CO-PROCESSOR	£999.00
* 32 bit processor * Complete with Fortran, Iso-Pascal, Cambridge Lisp, Panos, C, BBC Basic & 32016 Assembler * 1 megabyte RAM	
ANC01 6502 2nd PROCESSOR	£159.00
* Complete with 64K Hi-Basic * Compatible with B, B+ and Master	
ANC04 Z80 2nd PROCESSOR	£329.00
* 64K CPM * Complete with vast range of business software	

ECONET

AMB12 BBC MASTER ET 128K	£320.00
* No DFS * Econet station * 128K memory	
ADF10 ECONET MODULE FOR MASTER 128	£49.00
* Upgrades Master 128 for networking * Easy to install plug-in module	
PTC11 ECONET KIT	£55.00
* Upgrades BBC B or BBC B+ (please specify when ordering) * Must be professionally fitted	
AEH18 10 STATION LEAD SET	£25.00
AEH19 ECONET STARTER KIT	£79.00
AEH21 ECONET SOCKET KIT	£29.00
AES22 PRINT SERVER EPROM	£40.00
* Allows a BBC to be a printer server when Econetted	
AND61 10 MEG WINCHESTER WITH FILE SERVER	£999.00
* Plus into 1 meg bus * Complete with ADFS and file server manuals * Built in fan and power supply	

DRIVES

PTC01 DUAL 40/80TK DRIVES (MITSUBISHI)	£199.00
PTC02 DUAL 40/80TK DRIVES inc PSU (MITSUBISHI)	£210.00
PTC03 SINGLE DISC DRIVE (MITSUBISHI)	£109.00
PTC04 DUAL DISC DRIVES (MITSUBISHI)	£249.00
* In monitor bridge (Master size) * Built in fan and power supply	
PCT10 400K DISC DRIVE AND 20 MEGABYTE WINCHESTER	£799.00
* In monitor bridge (Master size) * Built in fan and power supply * Other size Winchester available	
CSX40S SINGLE 40/80TK DISC DRIVE (CUMANA)	£134.00
CSX80S DUAL 40/80TK DRIVES (CUMANA)	£260.00
CS800S DUAL 40/80TK DISC DRIVE inc PSU (CUMANA)	£295.00

PRINTERS

EPSON RX100+	£179.00
* 100 CPS wide carrier printer * IBM compatible * Extremely robust * Complete with tractor feed

* 100 CPS * NLQ mode * Centronics interface	
EPSON LX80 TRACTOR FEED	£18.00
EPSON LX80 SHEET FEEDER	£49.00
EPSON FX85	£399.00
* 160 CPS * Downloadable character set * Centronics interface	
EPSON FX105	£499.00
* As above with wide carriage	
EPSON FX85 TRACTOR FEED	£37.00
EPSON LQ800	£595.00
* 24 pin head * 180 CPS * Excellent near letter quality	
EPSON LQ1000	£795.00
* Wide carriage version of above	
KAGA TAXAN KP810	£229.00
* Low cost NLQ printer * Built in tractor feed * 160 CPS	
KAGA TAXAN KP910	£389.00
* Wide carriage version of above	
BROTHER HR15	£299.00
* Daisy wheel printer * Optional keyboard available * 15 CPS	
QUEN DATA DWP1120	£169.00
* Daisy wheel printer * Robust construction * 20 CPS * Qume compatible	
BROTHER M1509	£399.00
* 180 CPS * Built in tractor feed * RS232 and Centronics interface * IBM compatible * Full international character set * Epson compatible	

APPROVED ACORN SERVICE CENTRE

MONITORS

COLOUR

HANTAREX COLOUR MONITOR £159.00

- * Medium resolution
- * RGB interface
- * Composite video and sound input
- * Anti-glare filter

MICROVITEC 1451 COLOUR £235.00

- * Medium res monitor
- * Metal or plastic case
- * RGB interface
- * Complete with cable for BBC

MICROVITEC 1451 A/P £275.00

- * As above with audio and composite video input

MICROVITEC 1441 COLOUR £450.00

- * High resolution monitor
- * 895 pixels
- * RGB interface

TAXAN SUPER VISION 3 £349.00

- * Compact 12" super high resolution RGB colour display
- * Text switch gives green display
- * Super high contrast tube
- * 640 X 252 line resolution
- * 0.37 dot pitch

MONOCHROME

HANTAREX BOXER £69.00

- * High res green monitor
- * As preferred by educational establishments

KX1201 KAGA GREEN (P31) £89.50

KX1202 KGA GREEN (P39) £95.50

KX12003 KAGA AMBER (PUL) £95.50

- * P31 standard persistence
- * P39 long persistence
- * PUL long persistence
- * Greater than 20MHz bandwidth
- * Flat 635R tube
- * 1000 line resolution at centre

SOFTWARE

With every 3 ROMs purchased we will supply a MR3000 ROM board at no extra cost

COMPUTER CONCEPTS

WORDWISE £32.00

- * Mode 7 editing
- * Preview in mode 0 (80 cols)
- * Can produce ASCII text for modems

WORDWISE PLUS £45.00

- * As above with multi document editing
- * Built in programming language for data handling

INTER-SHEET £45.00

- * 40 80 and 105 column mode
- * Multiple spreadsheets in memory
- * 64 by 255 sheet size
- * ROM link

INTER-CHART £30.00

- * Built in Epson screen dump
- * Supports pie, line and bar charts
- * Line and bar graphs can be displayed on the same axis
- * Automatic scaling
- * ROM link

INTER-WORD £45.00

- * 80 or 105 column word processor
- * Continuous documents limited to disc size
- * Editing operations similar to Wordwise
- * ROM link

INTER-BASE £55.00

- * Compatible with all filing systems
- * Contains powerful Basic-like programming language
- * Card index mode
- * Powerful customising mode
- * Max 250 fields per record
- * Max 32K per field
- * Variable field lengths and records
- * ROM link

ACCELERATOR £51.00

- * Basic compiler
- * Can produce ROM/RAM format code from Basic programs
- * Comprehensive manual

CARETAKER £26.00

TERM 2 £28.00

- * VT52 terminal emulation
- * Complete with file transfer software
- * Easy to use menu options
- * Custom configurations can be stored on disc

COMMUNICATOR £55.00

- * As above with VT100 emulation

SPEECH ROM £25.00

- * Must be used with Acorn speech processor
- * Liven up your programs

ACORNSOFT

VIEW 3.0 £58.00

- * Industry standard word processor
- * Complete with printer configuring utility
- * Can be used in any mode
- * BBC B, BBC B+, 6502, Shadow RAM, DFS and ADFS compatible
- * Complete with comprehensive manual

VIEW SHEET £42.00

- * Compatible with complete View range
- * Can be used in any mode
- * Windows can be selected for printing

VIEW STORE £38.00

- * Complete with report generator
- * File size limited only by disc storage size
- * Data can be imported from other View products

VIEW SPELL £33.00

- * Spelling checker for View
- * Complete with 70000 word dictionary
- * Dictionary can be extended to include technical terms

VIEW PLOT £25.00

- * Enables you to draw line, bar or pie graphs
- * Compatible with Viewsheet

VIEWINDEX £15.00

- * For View
- * Automatically creates index
- * Notes page numbers
- * Sorts alphabetically

VIEW PRINTER DRIVER GENERATOR £9.00

- * Used to personalise View documents to include special printer features

GXR GRAPHICS £23.00

- * Extends plot ANV VDU commands to provide: circle plotting, ellipses, parallelograms, dotted and dot dash patterns, shading patterns, colour fill, shade fill and sprites
- * Built in sprite designer
- * Please specify BBC B or BBC B+

ISO PASCAL £52.00

- * Full implementation of the ISO standard
- * Can use BBC's sound and graphics
- * Compiles to a compact intermediate code
- * Complete with demonstration disc

LOGO £52.00

- * Good introduction to computing for children
- * Turtle graphics supported

TERMULATOR £27.00

- * Terminal emulator ANSI (VT100), VT52, Tektronix 4010, dumb terminal, hardcopy terminal and a special BBC terminal
- * Enables the host computer to be sent directly to the BBC's output driver

COMAL £39.00

- * Programming language standard in many European countries
- * Encourages structured programming

BASIC EDITOR £25.00

- * Powerful full screen editor
- * Many word processor functions included

MICRO PROLOG £60.00

- * Designed to emphasise human logic rather than machine procedure
- * Step closer to artificial intelligence
- * 6502 compatible

SOUNDS SPECTACULAR

Take it home — Plug it in to your computer and hi-fi system and start to make spectacular sounds using up to 16 sounds at once selected from the many preset instruments, waveforms and envelopes provided.

The new AMPLE Rom easy to use, powerful and versatile menu driven music

language. Includes 'Island Logic' music system style of Staff Editor. The Music 5000 synthesiser is now compatible with BBC B, BBC B+ and Master 128 (Music 500 is not compatible with BBC B+ and Master 128)

Dealer enquiries welcomed. We accept Education and Government orders

PEAR TREE

PEAR TREE

The black and white case for colour

Pear Tree are now offering the most powerful art package yet devised for the BBC Micro – Artist.

Artist is a new 16k language ROM compatible with the BBC Micro, BBC + and the new Master Series, allowing full manipulation of a mode-2 screen. With Artist and Megamouse, colour graphics take on a completely new dimension, which has to be seen to be believed.

Copying specific screen areas to exclude certain colours. Drawing and painting underneath any colour combination. Making your brush cycle through a defined colour sequence. Colour pattern editing. Sprites of any size. Animation. Just a hint of how Artist is the most highly advanced software package yet designed, with features never before seen on the BBC Micro. The only limitation of Artist is your imagination.

With the ultimate in art packages comes the ultimate mouse – Megamouse. Built to professional standards and comfortably shaped, it provides sensitive, accurate movement, that is unbeatable.

This exclusive Pear Tree offer includes the Artist ROM, the systems disc, a users manual and an excellent grey shade Epson printer dump.

You have the option of buying the Megamouse separately, or saving £10 by buying the complete package.

Artist is already ahead of its time. Don't be left behind – order now before it's too late.

The Artist is compatible with the AMX Mouse and the Megamouse is compatible with the AMX Software.

Artist Software	£45.00
Megamouse	£49.00
Artist and Megamouse	£85.00

PROFIT
A complete business system for only
£69

The first complete, integrated business package for the BBC Micro

Running a business isn't easy, but Pear Tree can help make it simpler with the most cost effective business software package on the market today – Profit.

Profit is compatible with all disk filing and advance disk filing systems for the BBC B, BBC B+ and MASTER 128.

Developed for Pear Tree's own compatible KBL 128 PC, Profit is as easy to use as ABC. Everything you require in running a business is there – accounts, stock control, customer data base and even the immediate status of your bank account.

With Profit, all the time consuming problems, the reams of paperwork and valuable hours taken in administration can all be condensed down far more efficiently. The

net result is that you have far more time to concentrate on making your company grow.

Profit is simply a way to help you control your business more profitably. Complete the coupon today and start to profit from the software designed for your business.

PEAR TREE PROFIT

'Profit' is now held in high esteem in both the business and computer worlds: "This represents good quality Business Software compared to others on the market and I can recommend it."

(ACORN USER magazine review, April 1986)

ON THE MENU

A visible menu is one of the most popular ways of communicating with an operational program. Joe shows how to devise menus to fit most situations

Joe Telford

One of the problems we all come up against is that of communicating with an operational program. Many of the 'Teach-yourself-Basic-type' books begin with an apparently simple little program such as:

```
INPUT x
LET a=x*2
PRINT a
```

and spend little time considering the necessary explanations for input or output. In fact it is important that we understand what the computer program requires of us, and what information it is presenting. The menus given in this article should work on all versions of the BBC micro, Master 128, Electron and 6502 second processors.

I once started a talk about the Human Machine Interface (HMI) with the statement: 'There are three major ways in which we can control the execution of a program!' A voice from the back called out 'Don't you mean four?' Not wishing to demean myself I continued, 'There are three major techniques, beginning with the menu-driven approach.' There was a slight pause, and the voice from the back of the hall called out, 'Five!'

The moral of the story is that we should always get our frame of reference agreed by everyone as quickly as possible. So let's start by considering just how we can control the execution of a program. This is quite an easy task. Examining a range of software should lead us to some generalisations.

Elite is controlled by joysticks, paddles, mice and tracker balls, so we need to include control by external devices as one item on our list. *Wordwise* is a classic example of a single keypress control system working from a menu. *The Hobbit* adventure has an almost free-form sentence entry format. *AU's Super Painter* program employs a single key control system operating from the function key overlay. *The*

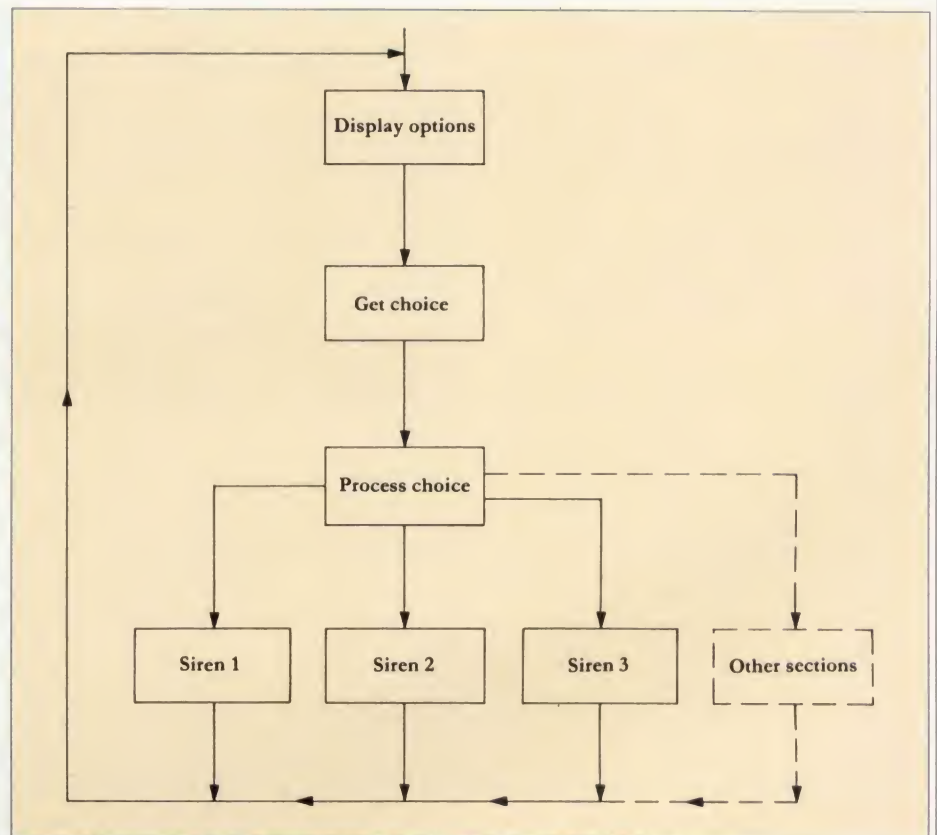

Figure 1. The structure of a typical menu. The main menu is enclosed in a loop

Basic Editor uses a combination of single word commands and single function key presses.

OK, so what does this boil down to? Well it does actually (and conveniently for me) reduce to three main types of control systems:

1. The visible menu and associated single word entry
2. Invisible menus and associated single key presses (including joysticks, etc)
3. The free format command sentence which is then decoded and acted on.

The only one of these which needs immediate amplification is the invisible menu of item 2. An invisible menu includes those commands which are shown on a function key overlay

strip or the regularly-used keys for, say, *Snap-per*. Have you ever thought how you would play *Killer Gorilla* successfully with a screen that continually showed:

```
Press z for left
      x for right
      / for down
      : for up
Return to jump
```

In this article I show how to create visible menus, which direct the user to enter particular keypresses, how the computer can process that input, and how to protect against some of the problems that arise.

Adapting one of the menus given will fill

JOE'S JOTTINGS

most situations. In future articles I'll cover other types of program control.

A visible menu has three parts: the action of displaying information; the process of accepting the user's entry; and the action of selecting an appropriate part of the program as a result of that entry.

Strictly speaking a menu is mainly concerned with the first of these two points, but the approach to the third part often has to be modified depending on the specific menu. Figure 1 is a diagram of a typical menu and its component parts. Notice that it is usual for the main menu in a program to be enclosed in a loop so that choices can be made a number of times. Visible menus are most often used in programs where the maximum number of choices are limited and the program writer can handle all possible outcomes. Of course such menus leave themselves open to 'If only he'd added facility xxx', but generally they provide the simplest and most effective means of communication between user and program.

Many menus use single key presses to indicate the user's choice. My approach with a visual menu which requires alphanumeric input is that we should always: put up some sort of prompt; allow the user to type and delete characters; expect the user to press Return to confirm that choice; and decode the choice and act on it.

Some menus (as we will see later) are graphic and rely on specific keypresses. In this case the approach is to: allow the user to press any keys; change the item on the menu whenever a selector key is pressed; and confirm that choice by pressing Return.

Looking at figure 1 we need to identify each area of the program and produce a matching piece of code. In each of the following programs we will use the same four common procedures, representing four major sections of a menu-driven program shown in listing 10. They include PROCs Siren1, Siren2, Siren3 and Phone: we are writing a sound effects menu-driven program.

These four procedures are relatively easy to understand. Sirens 1 and 3 are driven by varying the frequency parameters of envelope 1, while the twin-tone siren 2 is two distinct sound commands. The complex sound pattern of a trimphone is achieved by using four sound commands to sequence the warble created by a new envelope 1. Remember to add these procedures onto the end of each of the menus that you type in. The best way to do this is to enter the procedures and SPOOL them to tape or disc by typing:

```
*SPOOL proc
LIST
*SPOOL
```

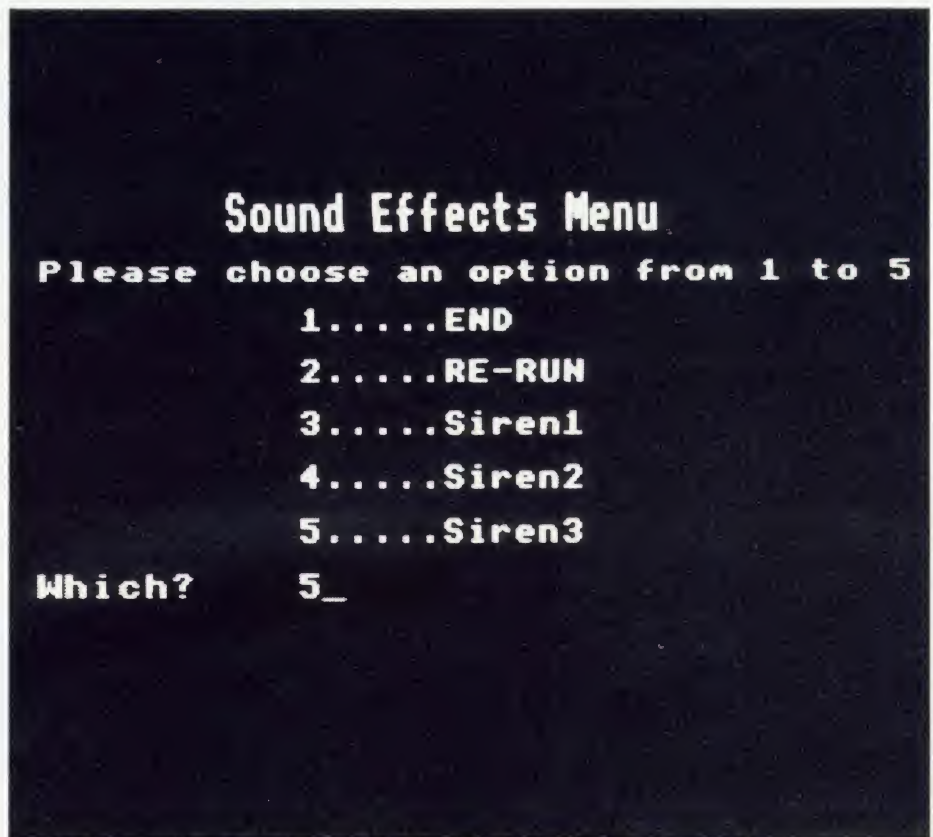

Figure 2. The maths behind the window menu program given in listing 9 on the yellow pages

The simplest type of menu – make your choice by hitting the key for the relevant number

They can be added to the end of another program later by typing:

```
*EXEC proc
```

Although there are four procedures, our menus are all set up for three procedures. If you wish to add the phone sound then you will have to alter the menus given. The idea of this is to give you some gentle homework. However, we will give advice on how to do this as we go along.

Building a simple menu

Let's use figure 1 to write the simplest of all menu programs, which will include a few warts. Notice that the whole program is

enclosed within a loop, so we can start off by initiating this loop:

```
80 REPEAT
```

Now figure 1 tells us to display the options available to the user, and we can do this using three lines:

```
90 PRINT"1...Siren 1"
100 PRINT"2...Siren 2"
110 PRINT"3...Siren 3"
```

Gosh, this is easy! The next box in the structures says get the user's choice, and we accomplish this with a single line which demands an input:

```
120 INPUT"Which?"choice
```

Finally we are expected to decode and process

the number typed. This will take one line of program per option:

```
130 IF choice = 1 PROCsiren1
140 IF choice = 2 PROCsiren2
150 IF choice = 3 PROCsiren3
```

Then, finally, we must indicate the end of the loop, and this is done with:

```
160 UNTIL FALSE
```

which indicates that the whole thing happens continually. Now just add your four extra procedures and type RUN. Pressing 1 followed by Return should give you Siren 1, pressing 2 and Return will give Siren 2 and pressing 3 and Return will give Siren 3. The complete program is shown again in a tidier form as listing 1 on the yellow pages.

Let's think for a moment. What is tacky about this program? Ask yourself:

- How can we stop the program?
- How can we restart the program? (In a business program, a re-start might be the fastest way to reset the program for another try)
- What happens when we press 0 or -1 or 6 or type garbage?

However, just before we discard menu 1 entirely, remember it might just be something which you would want to use to drive your own programs quickly as an aid to debugging. Let's add a couple of things to improve it.

Listing 2 shows the simple menu upgraded to handle the first two items in our list, and it now makes an attempt at checking the range of the number entered. Notice that each line of the display section (100 to 140) has a corresponding line in the decoding section (lines 170 to 210).

We can now think about adding the Phone option as option 6. But now that we have a range check in the loop from line 90 to 160, we will need to increase the range of choices to greater than 0 and less than 7.

The benefit of putting the menu into a procedure is that the main body of the program becomes shorter and easier to handle. A particular quirk of my mentality is that I only include the display and user input in my procedures. I leave the processing in the main body of the program because I often want to do mode changes and other things which are illegal inside procedures. Look at listing 3 and you will see that it is identical to listing 2, except that the display/input section of listing 2 (lines 90 to 160) is replaced by line 90... PROCmenu.

Looking further down the listing we come to DEFPROCmenu at line 170. This contains the code, from listing 2, line for line. The main benefit is one of readability.

The main body of the program is shorter and more easily understandable. The

DEFPROCmenu section can be slotted anywhere after the end of the main body.

Yet the search for a satisfactory menu cannot stop with procedures. The variable called 'choice' must now be global, ie, it has to exist in the procedure and in the main body of the program, and it should contain identical information in both areas. In a large program containing several menus, this might not be appropriate, and the variable could change value if it is used in two or more different procedures.

What we really need is a means of keeping variables in procedures local to those procedures, but to return a value from the procedure to the main program. This can be done by using functions.

Most of the menus which I use are actually

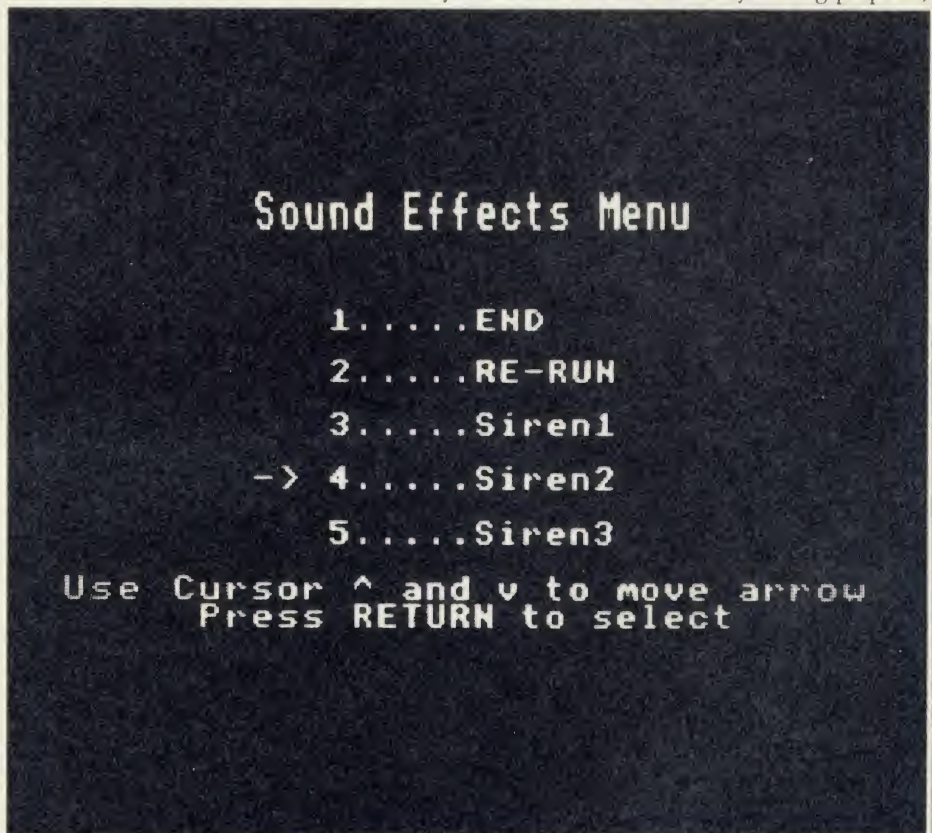

which can be input whenever an 'out of range' number is typed.

It might be worth coming back to our homework problem of extending an existing menu. To add a 'phone' to menu 4 we must consider the following points:

- Add a process line for option 6 at line 145
- Add a display line for option 6 at line 235
- Alter line 260 to cope with "choice > 6".....
- Alter line 270 to cope with "choice < 7"

Better layout

The choice of layout is not critical if you are dabbling for your own benefit. However, as soon as you extend a program's use to others, then layout and screen design become important. If the program is intended for wide distribution and for money-making purposes,

On this sophisticated menu, the user moves the on-screen arrow with the cursor keys to make a selection

function menus in one form or another. Look at listing 4, for example. The points of interest start with line 90:

```
90 choice = FNmenu
```

This indicates that the menu function is returning a value to 'choice' and that choice is only found in the main body of the program. This will make debugging easier. Matching this change is the DEFFNmenu of line 170 and the = choice of line 280. Notice that although the word 'choice' is used in DEFFNmenu it is declared LOCAL by line 180. This means that it is quite separate from the variable 'choice' in the main program. In addition we've added a line 260 which points out the range of numbers

then screen layout will sell more programs than your nifty little matrix manipulation routine, buried in your software.

Listing 5 shows how the screen layout can be improved considerably, but the cost is program size, which always increases as the layout improves. My own approach is to make use of mode 7 for most menus. This is advantageous because controlling teletext graphics uses less program space than the equivalent layout commands for the other modes. Conscious of readers with Electrons, I'll stay in mode 4 and accept the increase in memory usage which this entails. The screen layout is all performed in DEFFNmenu from

IT MAY LOOK LIKE A SINGLE DISC DRIVE TO YOU...

BUT YOUR COMPUTER KNOWS BETTER

£199.95
(256K RAM)
£249.95
(512K RAM)

It's the clever bits only your BBC computer can see which help the Opus Challenger outperform every other disc drive on the market, including dual drive systems.

Only Challenger has both a conventional double-sided floppy disc drive and a high technology RAM disc, effectively a second, lightning fast solid state disc drive which turns your unit into a unique dual system with up to a massive 1.2 Megabytes of useable capacity.

Only Challenger has its own built-in double density disc interface, making all that soldering and track cutting associated with other interface connections, a thing of the past. Just plug-in and away you go.

You'll find more performance than from any dual disc drive system and from only £199.95, Challenger is up to £50 cheaper than even the most inexpensive twin drive and interface package. Unbeatable value and a unique 3-in-1 combination:

- 5¼" DOUBLE-SIDED 40/80 TRACK DISC DRIVE
- BUILT-IN DOUBLE DENSITY DISC INTERFACE
- INTEGRAL SOLID STATE RAM DISC Up to 20 times faster than a disc drive and now available in 256K and 512K versions*

With all that power and performance you can race through work conventional disc drives labour over and, when you need to save to floppy, the RAM disc backs-up your information in a fraction of the time without any need for tiresome disc swapping. A & B Computing, which voted Challenger "Best buy of the year", said: "Using the RAM disc is a real dream... We checked a document just over 21K long, which took 5 minutes 56 seconds on floppy and only 1 minute 7 seconds using the RAM disc".

You don't even need to worry about compatibility. We've fitted the same disc controller chip used on the BBC B+ to make Challenger compatible with all leading software titles and it's suitable for use with the new 128 Master Series.

Challenger's price even includes VAT, FREE 72-hour delivery, the unbeatable Opus two-year warranty and a full operating manual.

So call us now on 0737 65080 for details of our nationwide dealer network or simply post the coupon. Generous education and dealer discounts available.

Opus.

line 170 onward. The title is always important and this often looks best if set in double height characters. A routine for handling this in mode 4 is given in DEFPROCdouble.

The double height procedure takes X and Y text co-ordinate positions, and a string of characters to print in double height. If the X parameter is greater than 80 then this signals the procedure to centralise the string across the screen at the Y co-ordinate given. Character doubling is performed by reading the definition of each character in turn using an OSWORD with A% set to 10. Character 128 is then redefined twice, to give the top half of the character and the bottom half. This redefining and printing happens in line 430. The c% variable points to some spare memory from location &71 to &78.

The next most useful improvement is to centralise the menu itself. This is done by using the PRINTTABs of lines 200 to 250. You must decide on the values chosen considering the number of menu lines, and their length. Notice also that the entry section of lines 260 to 300 is much altered. It uses PRINTTABs to define the position of all input on the screen. Notice too that the REPEAT loop of 260 to 300, combined with the INPUTTAB of line 280, means that there will be no movement of the menu on the screen. Line 270 prints a Which? message followed by a string of 20 spaces, which tidy the last input from the user.

General-purpose menu

Now it's time to think about a general-purpose menu routine. Menu 5 starts us on the way by transmitting two parameters in FNmenu(1,5) of line 90. These are decoded as the minimum and maximum acceptable values for the range check, and we can see their action in lines 290 and 300. However, we still have a long way to go to a totally transportable menu.

Using the input command to get the user's choice is fraught with danger. Certainly the program we have introduced in menu 4 is reasonably resistant to typing errors but try typing a long line (greater than the 20 blanking spaces) and see the result - untidy, to say the least. The usual alternatives to INPUT are either GET\$ or INKEY\$. To make either of these behave like an 'intelligent' INPUT routine would require a special routine which would allow typing and deletion of one or two characters, depending on the number of options available; selection of characters so that only numbers or letters would be accepted as appropriate; and comprehension that the Return key marks the end of INPUT.

Now we must make a difficult decision. Do we try to refine our existing menu to handle this intelligent INPUT, or do we go for an

alternative to numerical input? I'll follow the latter path.

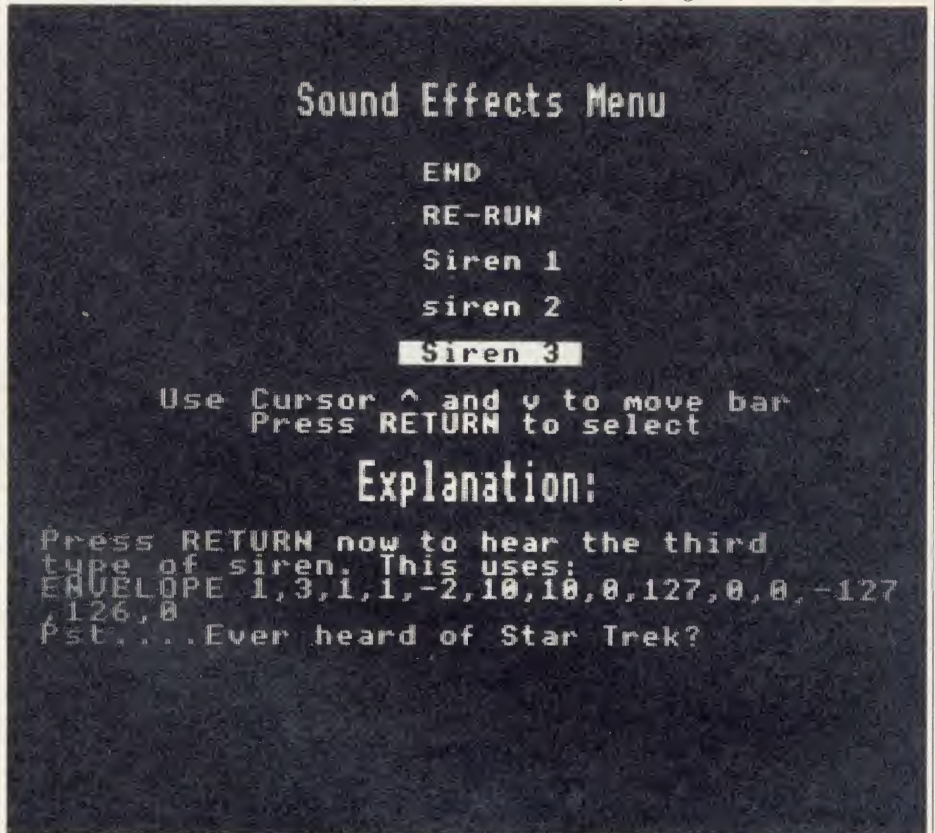

The route which we now follow will lead us to a more user-friendly approach to indicating menu options. Look at listing 6. This is almost identical to listing 5 as far as line 260. After this line we enter a routine which tests for only three keypresses. The Cursor Up key, the Cursor Down key and the Return key. Instead of the 'ch' variable we use a 'menuptr' (menupointer) which indicates the number of the currently selected item. The routine between lines 310 and 370 increments or decrements the value of menuptr depending on which key is pressed. Once the Return key is pressed the current value of menuptr is returned to the main program. Line 320 prints an arrow which points at the current option (→).

cursor keys using the GET command. Lines 380 and 70 both restore the cursor keys to their normal function. Line 70 is a simple error trap, which in repetitive menus is best placed outside the main program loop, so that the effect of Escape is to restart the main loop. However, during debugging I suggest you miss it out until the program is functioning. To improve error trapping, it could be altered to:

```
70 ON ERROR IF ERR < > 17
REPORT:END ELSE *FX4,0
```

Notice too, the VDU23 commands of lines 110 and 190. These turn the cursor on and off respectively. If they misbehave on your machine just miss them out. Finally, in menu 6 don't forget to add DEFPROCdouble which I have left out for simplicity.

We're really doing well now, but think a

This menu incorporates an explanation of the option you have chosen by moving the bar

Line 330 waits for a keypress, and line 340 deletes the arrow indicator by overprinting it with a couple of spaces. Lines 350 and 360 alter menuptr depending on the keypress. Notice that the last IF statement in each of these lines causes the menuptr to 'wrap' from top to bottom and bottom to top. Users who dislike wrapping can rewrite the lines:

```
350 IF key = 139 menuptr = menuptr - 1:
IF menuptr = min - 1 menuptr = min
360 IF key = 138 menuptr = menuptr + 1:
IF menuptr = max + 1 menuptr = max
```

The following additions to menu 6 also apply to the remaining menu programs. The *FX4,1 of line 290 allows the micro to examine the

moment. How effective an indicator is that little "→" arrow? What we really need is some means of drawing attention to the options in a powerful way. One approach is to highlight the current option by displaying it in reversed colour, ie, black on a white bar. This requires further use of memory.

Look at listing 7. The major alteration here is the approach to the display section. First a list called menu\$() is dimensioned for five items (line 70). Next the five items are entered into the list (lines 200 and 240). Notice that they are padded with spaces to make them all the same length to improve presentation. Now the display section and the keypresses are

JOE'S JOTTINGS

included in the same loop from lines 300 to 410. The first three lines (310-330) inside this loop are dedicated to printing the menu options, using line 320 to check for the currently selected option, and to set the printing colours accordingly. The weird and wonderful PRINTTAB (16,3+loop%*2) of line 330 is set by the programmer to achieve the required layout of the options. Altering the 16 will alter the horizontal position of the menu on screen. Altering the 3 alters the vertical start position of the menu. Altering the 2 will increase or decrease the gap between options.

Explaining things

Often, particularly when writing a menu which chains programs from a disc, it can be useful if users are given more information than the program title. Such expanded explanations can be achieved by adding an extra procedure to menu 7. If we simply alter line 320 to read:

```
IF loop%=menuptr PROCexplain
(menuptr):COLOUR0:COLOUR129:
ELSE COLOUR1:COLOUR128
```

then we can call on PROCexplain to expand on each option, below the menu. Listing 8 shows how we can add such a DEFPROCexplain to Menu 7 to get menu 8. Notice how line 490 blanks a suitable area below the menu (240 spaces or six lines) ready for the explanation. To keep the explanations concise we use quite complex PRINT statements involving the " mark to give line feeds within the single print statement. The other additions to menu 8 are the VDU19 statements of lines 100 and 110. Some would say that these improve the screen colours. Remember that menu 8 also needs DEFPROCdouble.

Homework time again! Adding the phone option to this menu will require us to cope with the following points:

- Adding a line 185 to process the PROCphone
- Alter the dim to allow for menu\$(6)
- Alter the FNmenu of line 130 to go up to 6
- Add a line 265 to include menu\$(6)="Phone"
- Add a line 555 to explain the phone (IF m=6 PRINT . . .)

The final stage in our search for the perfect menu takes us closer to the general purpose menu. Of course the user needs to understand the general principles behind windows and 'pop-up' menus. As long as your user can handle the up and down cursor keys and press Return, he or she will be able to drive a menu window. Listing 9 is the window menu program which is configured to handle menus of up to ten displayed items. This is set by

the DIM m\$(10) at line 70. Notice that the list has been renamed m\$(0) rather than menu\$(0) to save space. The actual window menu is called by line 130:

```
Choice=FNwmenu("Sound Effects",5,
"END","RE-RUN","Siren 1",Siren 2",
"Siren 3","","","","")
```

Notice that we send 12 parameters to DEFFNwmenu. These include:

- Parameter 1: The title of the window
- Parameter 2: The number of menu options (say n)
- Parameter 3: The 1st menu option string
- Parameter 2+n: The last option string
- Parameter 2+n+1: The first null string
- Parameter 12: The last null string

Always transmit as many parameters as

Dropped shadow box menu

the DEFFN expects to receive. Hence in our example we send the spare options as null strings.

Line 210 receives the 12 parameters and places all the strings into m\$(0) . . . m\$(10). The number of viable options is received in the variable 'max'. Before any menu display can take place the strings must be measured so that a window can be defined into which they will all fit. This is done in lines 220 to 250. By line 240 the variable 'len' contains the length of the largest string, including the title string. The next stage is to open a window, and this is done by line 280 which calls PROCopenwindow with four parameters. These comprise the text X,Y co-ordinates of the top left of the window, along with the width of the window (len) and the number of lines in the window (max+1).

DEFPROCopenwindow defines the text window in line 550 and then proceeds to frame it with a graphics rectangle and shadow, which is reminiscent of GEM or Mac type windows. The maths of lines 560 to 580 will work in modes 4 and 1 and is shown in figure 2. These lines can be lost in modes 6 and 3. The 'x*32+8' values will need changing to 'x*16+4'

mode 0 and to 'x*64+32' for modes 2 and 5. DEFPROCrect is a straightforward rectangle drawing procedure. Its 'f' parameter is a 'fill' flag and if set to 1 the rectangle is filled, while set to 0, 'f' causes an outline to be drawn.

Once the window is opened, the next stage is to display the menu and this is done by lines 320 to 350. The title line and the current option are highlighted by line 330 but only the current option bar moves.

The choice loop repeats from line 300 to 400 and the window is reprinted on each keypress, with the option bar adjusted if necessary by lines 380 and 390. Note that we have lost our 'min' variable.

Once the Return key has been pressed menuptr is returned to the main program for further processing. Tidiness dictates that the window should be closed, and this is achieved via PROCclosewindow, which after clearing windows with a VDU26 in line 460 proceeds to call PROCopenwindow again, but with the GCOL set to erase the graphics frame. Lines 490, 500 and 510 then clear the window, delete windowing, and reset the normal GCOL0,1 option. Lines 140 to 180 are the standard processing section which we have maintained throughout. Remember that the four effects procedures need loading for this program, but DEFPROCdouble is no longer required.

Updating this program to add additional options is extremely easy, up to the present limit of 10 options. As an example, we can amend the program to handle the trimphone sound by adding:

```
130 choice=FNwmenu ("Sound Effects", 6, "END", "RE-RUN", "Siren 1", Siren 2", "Siren 3", "Trim Phone", "", "", "", "")
```

```
145 IF choice=6 PROCphone
Notice that the changes to line 130 are the 5 into a 6 and the first null string into a "Trim Phone".
```

You may want to use one or other of these basic menus to index your discs. The most useful is probably menu 8, which would contain explanations of the various programs on offer. No real alteration to the menu program would be needed, except to include the correct program names with the correct options, eg:

```
160 IF choice=3 CHAIN "PROG1"
The way forward probably lies with mouse-driven symbolic menus currently found on the Mac, Atari and the Master 512, and I may well look at them in a future issue.
```

See the index to the yellow pages on page 113 for details of where to find Joe's listings

Yes - it's bargain- hunting time again!

For BBC Micro and Electron users this is the start of the top buying period of the year - the time when they stock up with all the latest hardware and software that will enhance the versatility, power - and just sheer fun! - of their micros.

And the ideal time to hold the Electron & BBC Micro User Show, where they get the best of both worlds - a first look at all the fascinating new-season products, and a chance to pick up really worthwhile bargains as yesterday's top sellers are sold at rock-bottom prices!

A-MAZE

Finding your way through a maze isn't easy, but when you have to find a treasure chest as well as the exit, then you really are in trouble

David Lawrence

Mazes have always been a source of fascination – right back to the ancient Greeks, when Theseus had to kill the Minotaur whose home was a labyrinth.

Whether they're drawn on paper or constructed out of hedges, people seem to enjoy following seemingly endless paths and getting progressively and hopelessly lost!

In this game a random maze is generated and you are placed at one edge of it: the aim is to find the treasure and, ultimately, the exit. The maze is drawn as a 3D 'down-the-corridor' projection, so it is quite easy to lose your bearings and wander around aimlessly. However, all is not lost: Theseus had his ball of

Z – turn 90 degrees left
X – turn 90 degrees right
/ – about turn (180 degrees)
: – move one square forward

S – scan (activate radar)
C – mark floor with cross
F – turn wall filling on/off

Table 1. The keys needed to find your way through the maze.

Figure 1. The walls, crosses, etc, can all be drawn in perspective using various X and Y co-ordinates

... Scan activates the radar and shows you a small area of the maze with you at the centre. This is useful because you can only use this option

... simple north-south stroll – a box of treasure, which has been randomly placed within the maze, must be found. If you find the exit and the treasure, you will be told to find it.

ES

... drawing is not as hard as it seems. An array is needed to store the maze. In the case an area of memory is used, a 2D array – to cut down on the amount of memory used. Each location in the array which represents a wall, the array can be read by using the coordinates (x,y) and written to by using (x,y,a) where x and y are the co-ordinates of the point you wish to look at and a is the value you wish to place at that point. The array starts off empty (ie, all wall). A random starting point is chosen, as well as a random

ING

```
.START Set X,Y
.CHOOSE Choose a random direction (1-4)
        Calculate new X and Y
        IF new square outside maze,
            goto CHOOSE
        If new square has already been
        visited, goto JUMP
        Make passage from old to new
        Make X and Y equal to new X
        and new Y
        If all squares visited,
            goto END else goto
        CHOOSE
.END >> END <<
.JUMP Choose a random square
        If it has not been visited,
            goto JUMP else goto
        CHOOSE
```

Table 2. How a random maze is created

direction (1 = up, 2 = left, 3 = down, 4 = right). The array $D\%(D,j)$ contains the values which need to be added to the X and Y co-ordinates to move X and Y in direction D ($j=1$ for X co-ordinates, 2 for Y co-ordinates). The best way to explain the full procedure is by means of a flow diagram: see table 2.

Although the array used is 20 by 20, the maze construction works on a 10 by 10 grid missing out alternate rows and columns. This means that walls are one block thick. This is done to make the 3D views in perspective easier to draw.

When designed, a random exit, start position and box position are chosen. The maze is then ready for exploration.

Three-dimensional views

A set of X co-ordinates corresponding to positions of the side exits is the only data that needs to be stored - all Y co-ordinates are worked out by proportions.

The procedure view (x,y,d) is the main

Walls can be coloured in or simple outlines: wall colour can be a navigational aid

routine for drawing what you can see. It produces the 3D view for position (x,y) looking in direction (d). It clears the top area of the screen, draws a border and resets the graphic window. It then calls the function 'room (x,y,d,r)' for each 'room' in front of you until it reaches a blank wall. It will also stop if it has drawn 12 rooms and has not found the end of the corridor; this is because it cannot draw in sufficient detail at this distance. The 'r' in FNroom is the element of the maze array for co-ordinate (x,y), ie, a wall, a cross, etc.

The actual drawing is done by the function 'room'. It 'looks' at the room to the left, the one straight ahead and the one to the right and for each one draws the appropriate wall,

corridor, cross, etc. Each one of these has its own procedure, eg, PROCsidecross. Function 'room' returns either 0 or $N\%+1$. A zero indicates that an end wall has been reached and no more drawing should be done. $N\%$ indicates how many rooms you can see ahead of you, so, if the function returns $N\%+1$, a further room can be drawn. The procedures for drawing the walls, crosses, etc, take the two stored X co-ordinates for the current room (the first is the 'near X', the second is the 'far X' co-ordinate) and calculates Y co-ordinates from these proportionally. Any of the items in the maze can then be drawn by using various Xs and Ys as ordered pairs: see figure 1.

When the next furthest room is needed the

CJEmicro's

ALL CJE MICRO'S SOFTWARE IS B, B PLUS & MASTER COMPATIBLE.

ENHANCED!

Multi-Font NLQ

Converts most printers to NEAR LETTER QUALITY
in user definable Fonts.

For EPSON & EPSON Compatibles, including MX/RX/FX/LX 80/100, STAR DP510/Gemini 10X/SG10/NL10 & Citizen 120D.

Simple to use, standard EPSON codes for Underline and Doublewidth used.

After initialising Multi-Font NLQ with a *MFNLQ, Multi-Font NLQ is normally transparent to the user. Multi-Font does claim some memory for workspace and storing font data. Multi-Font NLQ comprises of MFNLQ ROM for the BBC, and utility disc containing the FONT definer, ten fonts, BASIC demonstration program, VIEW demo text file and Driver.

Multi-Font NLQ is compatible with nearly all software, including most BASIC programs, VIEW, WORDWISE & InterWORD (SCRIBE & Printer Buffer software currently not supported).

Ten fonts are supplied or create your own using the font definer supplied.

Fonts included are:-

Standard NLQ	Bold
Courier	Shadow
Italic	Outline
Gothic	Broadway E.
CompTS	Theatre

Additional Font Disc MF 'B' contains:-
Hand, Script, Stencil, Broadway, Caps, Italic-Plain, Meccano, Plain, STD large, Wire, Greek/Maths and Inverse.

For Canon & Taxan Kaga users we recommend FONTAID in preference to Multi-Font NLQ.

Multi-Font NLQ (ROM and 40/80 Disc)	£30.00
Additional font disc 'MF-B' (12 fonts)	£15.00
P & P on MFNLQ	£ 1.00

This is Standard
This is COURIER
This is ITALIC
This is GOTHIC
This is COMPTS
This is BOLD
This is SHADOW
This is OUTLINE
This is BROADWAY
This is THEATRE

EXAMPLE OF MFNLQ FONTS

Additional disc 'A' gives an extra 11 fonts including:- Greek/Maths, Plain, Hand & (Elite, Condensed, & Super Condensed).

Now included is a facility to issue '*' commands within a VIEW document. To download new fonts within VIEW documents, the FONTAID ROM needs to be fitted in the BBC. (All other FONTAID facilities are available on both the FONTAID ROM & DISC). Fonts are always downloaded from Disc.

FonTaid is recommended to Canon & Taxan Kaga owners in preference to Multi-Font NLQ. As downloadable NLQ is a built-in facility of the Printer, full access to all the printers control codes is still allowed. The resolution of the FONTAID NLQ is also slightly higher than that of Multi-Font NLQ.

FONTAID requires 6264 RAM chip in printer.

FONTAID ROM & STD Font disc	(40 or 80 track)	£30.00
FONTAID ROM & STD Font disc with 6264 RAM	(40 or 80 track)	£36.00
FONTAID Additional Font DISC 'A' (11 fonts)	(40 Or 80 track)	£15.00
FONTAID Additional Font DISC 'B' (13 fonts)	(40 or 80 track)	£15.00

FONT ROMS of individual fonts are available eg "Square".	£18.00
P & P on FONTAID	£ 1.00

FONTAID

NLQ Definer for Canon & Taxan Kaga NLQ Printers.

Design your own NLQ Fonts or 'download' one of our 40+ predefined fonts.

Fonts can be downloaded within Wordwise, Inter Word or VIEW Documents allowing different fonts to be used for different paragraphs, or even individual lines of text. During downloading your Program or Text will not be corrupted.

On the FONTAID standard font Disk are the following eight fonts:- Square, Outline, Italic, Gothic, Computer Type Style, Bold, Shadow, and Broadway Engraved.

INFORM

A UNIQUE NEW POWERFUL USE FOR SIDEWAYS RAM

INFORM has been developed specifically to take full advantage of the Sideways RAM facility that many BBC micro users now have. Inform is compatible with most SIDEWAYS RAM units including ATPL Sidewise with RAM, Solidisc SWR, BBC B PLUS 128K & BBC MASTER series.

INFORM is a very powerful facility, which allows the user to display text information, of any kind, from Sideways RAM. This information can be readily accessed by using '*' commands from the keyboard or from application programs. In this way, much information can be displayed on the screen without stopping the current task, such as entering text in WORDWISE or VIEW.

The information in the RAM can be changed dynamically at any time.

Some of the possible applications for INFORM are:-

An on screen help manual can be created for your application, so that a reminder about more obscure points can be displayed at the users request. Information on your program or datafile contents, can remind you of their purpose.

Address and/or telephone numbers can be held and displayed quickly even while other applications are running. Very useful if you need to quickly display information about a client while he is hanging on the end of a phone!

Current prices for your products or stock position can be recalled instantly and readily modified using a wordprocessor. Similar files may be created from most databases such as VIEWSTORE.

In fact, any information to which you frequently refer can be displayed immediately without running another program. Your use of INFORM is only limited by your imagination, as they say!

There are three Inform Data Files (I.D.F.), of often used information, supplied on the disk to give an indication of the use of INFORM.

To use INFORM you must have Sideways RAM.

INFORM on 40/80 track disc. P & P on INFORM £1.00 £20.00

FNforward	Checks if it is possible for you to move forward
FNscan	Performs scan of immediate surroundings
PROCreloc	Relocates program down to &1100 if necessary.

Major procedures and functions

new 'near X' is given the value of the old 'far X' and a new 'far X' is read in. The X coordinates are stored in the array L%(). The walls are coloured using triangles (PLOT 85,x,y). Pressing F simply stops this happening and only the outlines are drawn.

Hints for playing

Many people may know the 'right-hand rule' for finding the way out of a maze. This simply involves placing your right hand on the right hand wall and following this wall round until you get to the exit. This system is fine, and works well, but it does become a bit tedious, especially if you then have to go off and find the treasure!

In this game, the scanner is useful in some situations but, because of its limited range, is not incredibly helpful in others. (Perhaps you may like to extend the range - all the neces-

Finding the hidden treasure adds to the puzzle . . .

. . . once you've found it head for the exit

saries can be found in 'FNscan'. Clearly then, the chalk is your most useful aid. I use it to mark corridors that are dead-ends. So if I go down a corridor and find a dead-end, I go back to the last junction and mark the entrance to that corridor with a cross and then go down a different corridor from that junction.

This means that if I come to a junction which has all exits except one 'crossed', then the whole of that area must be a dead-end, so I go down that un-crossed corridor until I get to the next junction. This procedure can then be repeated until all the dead-ends have been 'crossed out'. Finding the exit then is easy. Don't forget that the colour of the walls can help you remember where you are.

Improvements and further suggestions

The maze drawing routine always draws a solvable maze, so there is little room for improvement here. However, the start is always on the top wall and the finish always on the bottom wall, so it possible for you to start at the top of a very long north-south corridor with the exit at the bottom!

A routine to find the two points which are furthest apart (ie, the longest path round the maze) would be useful to position the start and end points. Also, if the treasure could be placed down the longest of the dead-ends, the game could be made harder.

As for further suggestions, the basic maze drawing routine can be used as the basis for many other maze games. I have used it for a basic 2D maze where the walls only appear

Array Value	Item in maze
0	Wall
1	Corridor
2	Cross
3	Treasure box
4	Exit

Table 3. The array elements of FNroom

when you hit them, a dungeon inhabited by nasty monsters (a *Dungeons & Dragons* type game), *Pathfinder* (based on the two-player board game of the same name), a 2D hexagonal maze - the rooms are hexagonal rather than square. I am currently developing a 3D 3D maze, in which you see down corridors as in this game, but the actual maze is constructed within a cube!

Acorn User would be interested to hear from anyone who has any further ideas for different maze games.

As a final note, don't forget the chalk, don't get too lost and watch out for the Minotaur!

For David Lawrence's MAZE listing, see the yellow pages index on page 113

CLEVER CALLIGRAPHY

This package of programs enables you to design your own ornamental lettering for a dot-matrix printer, with or without a wordprocessor

Mike Turner

This calligraphy program (listing 1 on the yellow pages) uses a dot-matrix printer to print out ornamental lettering in a style which resembles italic script. It can be used for producing letterheads, notices or handbills – for the school play, perhaps – or legible labels for parcels. Because of shortage of space, only the upper-case (ie, capital) letters and a space are included in the program, but later in this feature you'll find some tips on how to go about designing the lower-case letters and additional styles of letter.

The monthly listings cassette and disc each include a more sophisticated version of this program complete with all the lower-case letters and numerals together with the most frequently-used punctuation symbols, as shown in figure 1. The more comprehensive listing also contains procedures which alter the layout of individual letters within words to give a more balanced look to words such as 'Today', 'July' or 'Adjudication'.

To use the program you will need to create a file of text to be printed – you can either use *View* or the file-creating program provided here (listing 2).

The layout of each line on the page is controlled by certain control codes – what *View* calls edit commands – and the calligraphy program uses four of these:

- CE, which means 'centre this line'
- RJ, 'print this line so that its last letter appears at the right-hand margin'
- MS, 'make all the spaces between words equal in length'
- LJ, 'set the left edge of the print at the left margin' – this is the default setting.

In listing 2, the file-creating program, you use the Shift or Control keys together with any of the red function keys, followed by the code required and the text, in order to control layout. To print text up against the right-hand

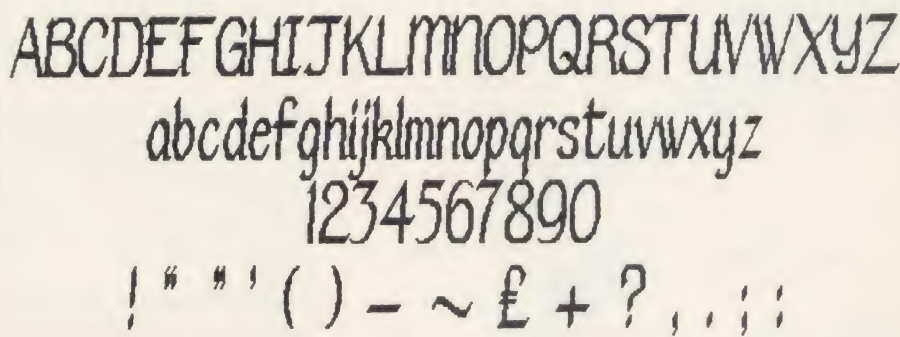

Figure 1. The full set: capitals, lower-case letters, numbers and punctuation

Figure 2. How a dot-matrix printer creates a capital 'I'

- Strikes 1 to 3 are all blank – no wires move.
- Strike 4: Wires 1 and 7 hit the paper. All the rest stay still.
- Strike 5: No wires move.
- Strike 6: Wires 1 to 7 move; 8 and 9 do not.
- Strike 7: No wires move.
- Strike 8: Only wires 1 and 7 move.
- Strikes 9 to 11: No wires move.

side of the print area, for example, type:

Line 1: I'm an Acorn Nut
 Line 2: <Shift f0>RJ and I'm out of my tree
 This will print as:

I'm an Acorn Nut
 and I'm out of my tree

Lines longer than 60 characters prompt a request to try again. Only 22 lines per file are accepted, as this is the maximum contained on an A4 page, but if, for instance, you would like a scroll of ornamental text instead, feel free to modify this.

When using *View* a few restrictions need to

be observed. Keep the number of characters to a line under a maximum of about 60. Use only the control codes mentioned above. Don't change the default ruler (I use mode 3).

When typing in the main calligraphy program, remember not to renumber the lines containing DATA statements, as otherwise the program will lose track of where to find the data for each letter.

How the printer works

Dot-matrix printers (like my Epson RX80) have a print head with nine fine wires arranged in a vertical column. In the normal text-printing mode, when the printer receives data

JOYSTICKS— THE COMPLETE SOLUTION

Delta 3B Twin

Delta 14B

Delta 14B/1

Delta 3S
and
Delta 3B
Single

Datapad 16B

DELTA 3B TWIN—BBC B or ELECTRON PLUS 1 £19.95

A direct but improved alternative for the original ACORN joysticks, with 2 joysticks wired to one plug. As with all our joysticks they have the fast action sprung to centre return of the steel shafted nylon covered joystick. The light action makes them ideal to hold and the 3 fire buttons allow left or right-handed use.

DELTA 3B SINGLE—BBC B or ELECTRON PLUS 1 £12.00

A single joystick that in some ways can act as two. The custom made special "low noise" potentiometers are wired so that it will work as a left hand or right hand joystick. It can even run some programs written for two joysticks and has the fire buttons of both.

DELTA 14B—BBC B £14.95

Our original ACORN/BBC handset. The same super light joystick, but the long life buttons, which have been video game tested for many years, increased to 14 in number. A DELTA 14B/1 is needed to run the keypad but a 14B on its own will work as a joystick and fire buttons, so you can always add the 14B/1 to it later.

DELTA 14B/1 for use with 1 or 2 DELTA 14Bs £14.85 DELTA DRIVER CASSETTE £5.95

The A/D/USER PORT interface box. This gives simultaneous access to both the analogue port, for the joystick part and the user port, for the keypad. Two handsets can be plugged into the box giving a total of 24 user definable keys.

Full instructions are provided to include the keypad in your own programs even in BASIC or for the non-programmer a DELTA DRIVER cassette is available with keyboard to joystick/keypad conversions and keypad set up programs.

DELTA 3S (for ELECTRON with switch joystick interface) £12.00

For an ELECTRON with a switched joystick interface (Not a PLUS 1) this gives you the same delightful light, fast action of the DELTA joysticks but fitted with a 9 way D plug as per Atari, Commodore, etc. and will run on First Byte interface or similar.

DELTA ASC/B FOR BBC, DELTA ASC/E FOR ELECTRON PLUS 1 (not illustrated) £9.95

This little box plugs in series with your analogue joystick to alter its characteristics simply by using a switch. In one set up the joystick will act like a switched joystick, i.e. a slight movement will act as if the joystick has been pushed hard over. In the other mode the joystick only covers the centre half of the A/D converter so that it takes twice as much movement to give the same effect. This makes it much easier to make delicate adjustments to programs like flight simulators.

DATAPAD 16B £39.95

A commercial spec. 16 way keypad. Full travel mechanical keys with double shot moulded keycaps mounted in a low profile metal case. The keys are marked with calculator legend, but the software included allows the pad to be defined as any keys, including function keys or single byte VDU commands such as PRINTER ON/OFF. No tampering with the computer as it fits onto the user port.

Telephone (0462) 894410

from the computer, it assumes each item is the ASCII code corresponding to a letter, a space, a linefeed, a carriage return, and so on. For instance, if the printer receives the number 73, it goes into a subroutine determined by its manufacturer, and prints out a capital 'I', a column of dots at a time, stepping itself by a tiny amount to the side after each 'strike'. Each standard letter has 11 of these strikes, and for a capital 'I' the sequence is shown in figure 2.

To design the letters used here, I used a printer mode called the 'dual-density bit image' mode. In this mode, if the printer receives the number 73, it doesn't print a capital 'I' at all. Instead the head gives only one strike of the paper, and prints a pattern using only eight of its nine wires, as in figure 3. In fact, if we wanted to produce a replica of our capital 'I' in

printer manuals tend to be rather inscrutable – figure 4, for instance, shows what mine says on the subject (honest!).

It took me a long time to make any sense of this, but what it means in BBC Basic (if not in BBC English) is that in order to put the printer into the correct frame of mind for a whole line of 960 strikes, first send a VDU2 then this statement:

VDU 1, 27, 1, ASC("L"), 1, n1, 1, n2
 where n1 = 960 MOD 256, and n2 = 960 DIV 256, calculated previously.

After this, the printer knows that the next 960 bytes of information it is going to get are graphics characters, and after it has received them it reverts to its normal text mode. Therefore, in the main program we have to set up the printer for graphics at the start of each

for each successive configuration of its print wires. But there's a problem: the eight print wires have 256 possible pattern variations for a single strike, ranging from no wires firing (data = 0) to all wires firing (data = 255) and I for one could never learn them all. Fortunately, the solution really is easy – we need to remember only 16 patterns, which are shown in figure 5. To get a column of eight dots, not four, just double them up (figure 6).

Four passes of the head are needed to build up each line of calligraphic print. The first item in each DATA statement gives the number of strikes for each 'storey' of the letter – succeeding items are strings representing the pattern for each strike.

Figure 7 shows how to derive the DATA statements for the letter 'a'. My alphabet was

(If the printer receives the number '73' while in a bit-image mode, it prints this)

Figure 3. One strike of the paper, using only eight wires

```
Name: ESC L- Dual-density Bit Image Mode
Expression: CHR$(27); "L"; CHR$(n1); CHR$(n2);
CHR$(d1); CHR$(d2); ... CHR$(Dn1, n2)      ◀ Bit-image data
Function: Sets Dual-density bit image mode. (The maximum
number of bit-image data per line is 960.)
```

Figure 4. The impenetrable prose of the printer manual

this mode, we would have to send the printer 11 bytes of data, not just one, like this:

```
10 VDU 2
20 VDU 1, 27, 1, 76, 1, 11, 1, 0
30 FOR strikes = 1 TO 11 : READ data :
VDU 1, data : NEXT
40 VDU 3
50 END
60 DATA 0, 0, 0, &82, 0, &FE, 0, &82, 0,
0, 0
```

Line 20 of the above is the command which puts the printer into the dual-density bit image mode. It tells the printer that the next 11 numbers it receives from the computer should be printed as graphics, not text. It is worth talking about this command for a while, as

pass of the head. Also, we need to adjust the line spacing so that we get neither gaps nor overlaps between passes. The distance between the wires on my printer is 1/72 of an inch. We want the second pass to start where the unused ninth wire would have been on the previous one. The manual talks of a code called ESC A, to set line spacing in units of 1/72"; this translates as:

VDU 1, 27, 1, ASC("A"), 1, 8
 The last figure is the one representing the number of units needed – there are eight spaces between nine wires.

Once we have the printer in graphics mode, we can build up patterns of strikes for any shape we like, by sending the printer a number

Figure 5. Sixteen patterns to remember

Figure 6. Doubling up for eight dots

designed on grids like this, pencilling in and rubbing out squares until each letter looked about right. I suppose I could have written an on-screen design program but I could use the paper-and-pencil one on the train. Figure 8 shows how 'G' was produced.

Once you have the shape of a basic letter like a small 'a', you'll find it a help in designing others. For instance, a 'd' is not much more than an 'a' with an upright tail, the tail shapes for a 'y', 'j', 'g' are pretty much the same in terms of dot patterns, if not positioning – the 'j' has a different width – and an 'i' is similar in shape to an 'l'. Also, the curves of the left side of the 'a', 'c', 'd', 'e', 'g', 'o' and 'q' are all very similar. If you feel you haven't the eye for

GRAPHICS

designing letters from scratch (like me - I'm still not happy with the 'M' and 'N'), there is an easier way. I subsequently coded another font by using rub-down letters bought from a stationery shop and a photographic enlarger. By sticking the rub-down letters onto a piece of clear film, and projecting this onto a grid of squares - the printer was used to produce this - the outline of each letter was drawn in. If a square looked as though it was more than half covered by the projected shape, it was a 'dot', otherwise it was blank.

Procedures and variables

In general, I have tried to use self-explanatory names for these. For instance, 'font\$', in line 100, contains all the letters for which DATA statements have been compiled.

(You will need to include in font\$ each additional character you design yourself as you include its DATA, because if the program comes across a character it doesn't recognise, it prints a space.)

PROCfill (j%) is a procedure to print a set number of blank strikes. It is used for any occasion where a blank space is needed. A modification to the program could use this to provide a variable-sized margin, for instance.

fullwidth is a variable describing the maximum number of strikes allowed in the dual-density bit image mode.

n1 and n2 are sent to **PROCgrafix** to tell the printer that it is about to get full-width (ie, 960 for my printer) bytes of graphics codes.

PROcfile reads bytes from the file, constructing writing\$ as it goes, until it comes to a Return character (&OD). If the first byte that is read in from the file for a line is the number 128, then the next two bytes represent a control code.

PROccontrols examines writing\$ for these, and strips them off if they exist. If there are no codes, it sets the flag LJ.

PROclayout decides how to respond to the control codes, distributing spaces where needed. It uses the variable 'lead' to decide how many blank strikes are needed at the beginning of the line.

PROcletter chooses which character is due for printing.

PROccentre counts the number of spaces in writing\$ (sp), decides how many strikes (strikes%) are needed to print it, and calculates how many blank strikes (spaces%) are left to fill in each line.

PROcprint reads the DATA, converts the string (dots\$) into a hex number (dots%), and sends this to the printer, adjusting the width of space characters if the flag MS is set, and counting the number of head-strikes to keep track of its position on the line.

```
3170 DATA 16,0,3,7,1F,38,70
,60,C0,C0,E0,F0,FF,7F,7F,0,0
3180 DATA 16,F0,FE,FF,F,7,3
,3,6,C,18,3F,FF,FF,C1,2,0
```

"a" is 16 strikes side so first item in each DATA statement is therefore 16

For added speed, line number for first DATA statement for "a" can be calculated as $50 * (\text{ASC} "a" - 65) + 1570$ ie, 3170

Figure 7. How the DATA statements for the letter 'a' are derived

Binary to hex

After a character has been designed the lines of bytes need to be converted from dots to a number for inclusion in a DATA statement. The 8 dots within each byte provide the binary pattern to make the calculation. For each dot substitute a 1 and for each clear position substitute a 0. So a line composed of 4 dots and 4 clear spaces thus:

would become 00001111 in binary. Converting this into hex is straightforward enough and can be calculated using the following formula:

$$(0 \times 128) + (0 \times 64) + (0 \times 32) + (0 \times 16) + (1 \times 8) + (1 \times 4) + (1 \times 2) + (1 \times 1)$$

which in turn simplifies to:

$$0 + 0 + 0 + 0 + 8 + 4 + 2 + 1 = 15$$

The result here is in decimal but the program requires it to be in hex format. To convert from decimal to hex use the table below as follows. First treat the binary value as two 4 bit numbers and convert each using the following formula:

$$(x \times 8) + (x \times 4) + (x \times 2) + (x \times 1)$$

This will give you two numbers in the range 0 to 15. Extract the hex equivalents from the table below and place them together to end with a two digit hex number. Example: Convert 11010001 to hex.

$$1101 = (1 \times 8) + (1 \times 4) + (0 \times 2) + (1 \times 1) = 13$$

$$0001 = (0 \times 8) + (0 \times 4) + (0 \times 2) + (1 \times 1) = 1$$

In table 13=D and 1=1 so hex value is D1.

Dec	1	2	3	4	5	6	7	8	9	10
Hex	1	2	3	4	5	6	7	8	9	A
Dec	11	12	13	14	15					
Hex	B	C	D	E	F					

Speeding-up Calligraphy

The version of Mike Turner's Calligraphy program published in the yellow pages is the 'legal' version. That is, although the listing is presented with line numbers starting with 10 and going up in steps of 10, once entered, the program could be renumbered without affecting its operation. The disadvantage of using this version is that it can be quite slow, but the program can be speeded-up considerably by using a little 'illegal' trick.

To find the data for a particular letter, the program currently reads each item of data before the required line. It would be much quicker to use BBC Basic's RESTORE command to jump to the required line and this can be done with a little care.

It is vital that you enter the listing with

```

3000 DEF PROCcheck
3010 c$="121318D210501A751B4B1C1
F"
3020 c$=c$+'12B5126D0F8D171D0FD4
08B1"
3030 c$=c$+'1EB415FA153513791A50
1773"
3040 c$=c$+'12A2190F10580C6715DE
116A"
3050 c$=c$+'115113FF"
3060 FOR char%*ASC"A" TO ASC"Z"
3070 dataline=1570+50*(char%-65)
3080 RESTORE dataline
3090 T%=EVAL("&"+MID$(c$,1+4*(ch
ar%-65),4))
3100 C%=0
3110 FOR L%=1 TO 3:READ W%:C%=C%
+W%
3120 FOR B%=1 TO W%
3130 READ d$:C%=C%+EVAL("&"+d$)
3140 NEXT:NEXT
3150 IF C%>T% PRINT"Error in DA
TA for "CHR$char%
3160 IF C%=T% PRINT"DATA for "CH
R$char%" OK"
3170 NEXT:ENDPROC
    
```

PROCcheck: a checksum to add to listing 1

exactly the same line numbers as printed in the yellow pages. Then add two extra lines:

```

1321 dataline=1570+50*(char%-65)
1322 RESTORE dataline:ENDPROC
    
```

This trick relies on two facts: the first line of data for the character 'A' must be located on line 1570 and the difference in line numbers between letters must be constant at 50. If these facts are true, the trick will work and the program will run considerably faster.

Checking errors

Because of the considerable amount of data included in the program, a checksum procedure has been devised (above). Enter listing 1, save it and then add PROCcheck. To check your data, type PROCcheck <Return> and any errors found will be reported. It is important that you enter the listing with the same line numbers as printed.

David Acton

For the Calligraphy and Filer listings, see the yellow pages index on page 113

FILE IT SIDEWAYS

Beat the 31 files per disc catalogue barrier by using the BBC micro's little-known ROM Filing System

Mike Rawlings

In the March '86 issue of *Acorn User* I looked at the sideways answer to data storage space problems: this month there's more lateral thinking on running longer-than-normal programs, loading disc-based programs at &E00 without a downloader and beating the 31 filenames per disc catalogue barrier.

All this and much more can be achieved using the BBC micro's ROM Filing System, a much under-mentioned and little-used facility. Any file that can be saved on disc or cassette can be stored on a ROM or in ROM-format using sideways RAM. Listing 1 on the yellow pages loads your programs or files, scrambles them into ROM format, stores them in sideways RAM and then (as an encore) downloads them and saves them to disc or cassette. They can then be loaded directly into sideways RAM as and when needed.

Before delving into details of how the Romfile program works and, more important, the best way of using it, a few words on the ROM Filing System.

The ROM Filing System is a close relative of the cassette filing system with a few commands borrowed from the disc filing system. Like the cassette system it has a default page value of &E00 and files are stored in data blocks complete with header blocks, both followed by two bytes containing the Cyclic Redundancy Check (CRC), used for checking for corruption during loading. In addition, all this has to be preceded by the ROM header code – a machine code program that tells the operating system what kind of ROM it is, and which carries out all the boring tasks such as displaying *HELP messages, pointers to where file data is stored and much more. The ROM Filing System does not, of course, support save routines – hence the need for this program. Commands borrowed from the disc system are *TYPE, *LIST and *DUMP – the last uses the normal

disc buffer at &E00. These three commands only exist if the DFS is fitted. Lastly *CAT will, if preceded by *OPT1,2, give full load and execution addresses together with file length.

The Romfile program

Those impatient to put all this into practice can skip this section and start typing immediately. The program produces a Romfile very speedily without the need to understand how it works. For those with more patience, read on.

Probably the best way to explain how the program works is to proceed in running order. First, PROCass assembles three machine code utilities; the first assembled at &70, is a string input routine (using OSWORD with A=0) called from FNinput(x) at line 3540. This limits the length of the input string to x characters. The second (CRC) calculates the Cyclic Redundancy Check with address of data stored at &8B/&8C, length of data at &8F and returns the CRC high byte at &8E, low byte at &8D. At the end of each header or data block the high byte comes first. The third routine (read/write) is used both for storing code and data in sideways RAM and for downloading the finished Romfile ready for saving.

After prompting the user for a Romfile title and asking how much sideways RAM is available, we come to PROCromsetup. This assembles the ROM header code at &3400 and then uses the read/write routine to store the assembled code in sideways RAM. This header code includes the following routines: general *HELP message (help 1), detailed *HELP message (help 2), pointer to start of first file (file), access data (byte), and display message on Break (boot).

PROCmemleft calculates and displays, not the amount of sideways RAM left after the header code, but the largest program that can be stored in this memory allowing for header

blocks, CRCs and block separators. The first file to be stored in ROM format is then *LOADed at &3400 ready for encoding by PROCencode. Note the addresses read in from PROCrdaddr at line 530. PROCencode assembles the encoded file in sideways RAM in the format described in chapter 35 of the *User Guide* with two exceptions. First, header blocks are used before the first and last data blocks only, all other blocks being separated by a single byte containing the value &23. Second, the four spare bytes at the end of the header block contain the address of the first free byte after the file, to help in fast file searches.

The process of *LOADing and encoding is repeated as often as available RAM allows – there is not restriction on the number of files that can be stored on a Romfile. Lastly the end of ROM marker (&2B) is stored in the first free byte after the last file. The completed Romfile is then downloaded to &3400 using read/write and *SAVED. Note that the reload address is &FFFF8000 and not &8000; this is to make the Romfile tube-compatible. The prefix FFFF tells the filing system that the file load address is in the I/O processor, and ensures that it will load correctly with the second processor in use.

Using the program

When the program is run you will be asked for the number of your ROM socket containing sideways RAM, and then a 'Romfile Title' – this is used not only as the name to be displayed on pressing Break but also the filename for saving the completed Romfile to disc or tape. Next enter the size of your sideways RAM (8 or 16). You will now see the maximum filelength displayed at the top of the screen, and you can enter the name of your first file to be stored on the Romfile. It is wise to make a note of the length of files to be stored in advance, to avoid the 'This file is too long'

UTILITIES

'Romfile title'. (The ROM size doesn't matter.) The program will report back whether the code has been entered correctly or not.

Testing the program

Carry out the example of appending programs, ie, create a Romfile called "SUBS" made up of "SUB1" and "SUB2". Answer '8' to the question '8k or 16k RAM' - the maximum filelength displayed should be &1DBC.

After loading and encoding "SUB1", the maximum filelength ought to be &1D76 (providing the filelength of "SUB1" is &2B). Answer 'N' after loading and encoding "SUB2", press <space> and after "SUBS" has been saved answer 'N'. This will cause a soft reset and you should see the following display:

```
BBC Computer
Romfile: SUBS
Acorn DFS (if fitted)
BASIC
```

Now type:

```
*ROM <Return>
*CAT <Return>
```

and you should see the programs stored on the Romfile listed:

```
SUB1
SUB2
```

Now type LOAD"SUB1" <Return> and then LIST <Return>.

Possible errors

'Bad ROM': there is an error in the ROM header code - check PROCromsetup.

'Data?': there is an error in PROCencode - probably "search" has been calculated incorrectly - or the values poked into !&8B and ?&8F were incorrect before CALLcrc.

Or why not send for this month's listings disc or cassette and get it right first time?

Program notes

Cassette or ADFS users should alter lines 310 and 510 to:

```
310 title$=FNinput(10)
510 file$=FNinput(10)
```

The program has been tested on both *Acorn User's* UserRAM, the BBC B+128, the Master and on a Solidisk system and should work with others. Those readers with UserRAM fitted should enter the appropriate ROM bank number; Solidisk users should use 15.

Procedures and functions

PROCromsetup: assembles ROM header code

PROCass: assembles controlled input routine, 'crc' routine, and 'read/write' routine

FNinput(x): calls controlled input routine and returns string at &C00

PROCmemleft: calculates maximum filelength that can be stored in remaining memory

PROCencode: encodes the file loaded at &3400 in ROM format

PROChblock: assembles header block without CRC

PROChheader: assembles header block with CRC

PROsave: downloads finished Romfile to &3400 and then saves it

PROCequib(n): sideways version of EQUB

PROCequw(n): sideways version of EQUW

PROCequd(n): sideways version of EQU D

PROCequs(n\$): sideways version of EQU S

PROCoscli(n\$): Basic 1 version of OSCLI

```
310 title$=FNinput(10)
510 file$=FNinput(10)
520 PROCtape
530
5300 DEF PROCtape
5310 VDU 28,0,8,39,6
5320 CLS:i$=""
5330 PROCoscli("LOAD "+file

5520 =(USR(&FFF4) AND &FF00
)/256
```

Listing 2. Amendments for cassette users

PROCmore: any more?

PROCsetequ: sets up parameters for sideways equ PROCs

PROCrdaddr: calculates the file's addresses

PROCreloc: relocating routine.

Variables

title\$: Romfile title

rom: size of available sideways RAM

memleft: maximum filelength

file\$: filename of file to be encoded

load: load address of file to be encoded

exec: execution address of file to be loaded

length: length of file to be loaded

search: address of first free byte after file being encoded

block: number of data block being encoded

address: address of data being encoded

flag: header block flag

blen: length of data block being encoded

bk: sideways bank number

hrc: crc high byte

lrc: crc low byte

control%: parameter block to find file addresses

Romfile listing

Romfile contains both Basic and assembly language sections which need to be entered with care. The listed program will work on a disc based BBC B with sideways RAM, the BBC B+ with sideways RAM, the BBC B+128k and Master 128k. Details for conversion to tape based systems follow. Once entered, save to disc (tape) and reload after first setting page to &1200 with:

```
PAGE = &1200
NEW
```

SRAM details

For use on any of the above machines you will need to input the location of your sideways RAM block. For example on the Master 128 the sideways RAM banks are located in slots 4, 5, 6, and 7 and the desired value should be entered when you are requested to do so. If you are in any doubt as to which of the sideways RAM banks are free then typing

```
*ROMS
```

will give you a list of the ROMs present. On the BBC B+128, the sideways RAM banks are normally referred to as W, X, Y and Z - these are effectively mapped like the Master's as banks 4, 5, 6, and 7 and should be selected as such. Again *ROMS will list the contents of RAM/ROM banks if you are in any doubt as to which are free.

If you are using a BBC B or BBC B+64k then you will have a third party RAM/ROM board in operation. Most multi-ROM boards have the RAM/ROM sockets numbered on them or provide details of socket numbers in the accompanying manual. These should be entered accordingly.

Sideways RAM modules such as the *Acorn User* UserRam fit into a single socket: again refer to the manual to ascertain in which socket the RAM module is located.

Tape users

Listing 2 on this page contains the changes which will need to be made to the program before it will work on a tape based system. These allow the tape catalogue details concerning length, load and execution addresses to be read from the screen after the tape file has loaded. Note: line 530 should be deleted.

Yellow Pages: Mike Rawlings' listings are on the yellow pages. See the index on page 113

COMPETITION

A RAM IN SHEEP'S CLOTHING

Pen your rams and win some ROMs: there's great software to be won for this month's brainteaser

Simon Dally

The illustration above shows an open field dotted with trees. You have eleven rams and you wish each of them to have its own enclosure, each with a tree for shelter. You must find the minimum number of fences that are needed to be built to achieve this, bearing in mind the following:

- All fences must be straight;
- Grid numbers are for reference only – a fence may begin and end anywhere;
- Fences may, of course, cross one another.

Draw your fences with a ruler and pen on the diagram and cut it out. Send it, together with your name and address to September Competition, Acorn User, 141-143 Drury Lane, London WC2B 5TF to arrive not later than 22 September.

A photocopy will do if you don't want to cut your magazine, but you must attach the coupon from the foot of the page with your entry.

Win two ROMs and two discs from Clares

The senders of the first five correct entries drawn out of the hat will each receive an exciting pack of Clares software.

There are two ROMs and two discs in the package. *BROM PLUS* is one of the most popular toolkit ROMs around, adding a host of extra commands to your micro to make life

easier, including a full screen editor, finding strings or keywords, search and replace and much more. *MACROM* is a fast macro assembler ROM that allows the use of macros, loaded from a macro library stored on disc. Assembly can be from disc to memory, disc to disc, memory to memory or memory to disc.

Fontwise Plus (on disc) brings you proportional and justified text in 12 different fonts. It's compatible with *View*, *Wordwise* and *Wordwise Plus*. Finally, *Clares Fontwise Editor* disc allows you to design your own fonts for personalised printing.

The whole package would normally cost £114.50 but you can win one free if you draw those fences in the right place!

SEPTEMBER

BAR CODE

ACORN USER

Bar code reader teaching pack

Illustrated above are some of the contents of the Bar Code Teaching Pack, designed to give the student or home user the chance to learn about and use bar code technology.

The pack was developed by the Microelectronics Education Programme (MEP) and Addison-Wesley and is available direct to readers of *Acorn User*. The pack includes:

- the bar code reader – which connects directly to your microcomputer
- a user manual written by George Hill
- software to print bar codes and a metal bar code stencil
- a 40-track disc or cassette of utility software – the cassette software can be transferred to 40 or 80 track disc.

The software includes some demonstration programs including:

- using the bar code reader as a binary decoder
- the TELEPEN system for encoding ASCII characters into bar code
- reading programs from bar code printouts
- reading EAN codes at supermarkets checkouts

Also included is a printer driver routine to print out bar-coded listings from Basic.

The total pack costs £83.84 inc VAT and £2.95 postage (£72.90 exc VAT).

Please send me: _____ Bar Code Reader Teaching Packs at £83.84 each inclusive

40 track disc or cassette

I enclose cheque/postal order made payable to Redwood Publishing for £ _____

USERRAM

ACORN USER

Easy-fit sideways RAM at easy prices!

- 16k ● Fully-compatible with BBC B/B+ ●
- Backed by *Acorn User* ● 3 minutes to fit ● Disc
- Simple for schools ● Ideal for Econet

Take a piece of software, load it in UserRAM using the utilities provided and it can be accessed instantly using a '*' command or run as a Basic program. The *Acorn User* UserRAM is as easy to install as a sideways ROM, with just one lead to clip on to the leg of a chip – there's no need to unplug the chip.

A comprehensive printed manual gives fitting instructions, information on how to create your own sideways RAM software and technical notes on how the utilities provided work. Also, a standard disc (which runs on 40 and 80 track drives with any DFS and is unprotected) is supplied with all the basic utilities needed. One year's guarantee is given, with postage and VAT included.

Pack 1 £38.50

- 16k sideways RAM chip with attached connecting lead.
- Disc of utility software.
- Instruction booklet.

Pack 2 £57.95 also contains

- 19 new utilities including printer buffer, *FORMAT and *VERIFY for discs, ROM auto boot, two OS calls and more.
- *BBC Micro ROM Book* by Bruce Smith (published by Collins at £9.95).

Please send me _____ copies of pack 1 at £38.50 each

Please send me _____ copies of pack 2 at £57.95 each

I enclose a cheque/postal order made payable to Frondwood Ltd for £ _____

Please debit my Access card A/c No Expiry date

NAME _____

ADDRESS _____

POSTCODE _____ 106-9

SIGNED _____ DATE _____

Fill in this coupon and send it (or a copy) with your remittance to: **UserRAM, Acorn User, 141-143 Drury Lane, London WC2B 5TF.**

PROGRAM LISTINGS

ACORN USER OFFERS

September listings on cassette £3.95 or disc £5.95

You'll find Maze on the disc and tape

We're featuring three great programs this month: Mike Rawlings' super new sideways RAM utility, David Lawrence's addictive Maze game and Mike Turner's exciting calligraphy program which supports the full character set.

Plus, for the first time this month, there is an added extra for all of you cassette users – a great graphics bonus, and all for only £3.95.

The cassette version of the monthly listings is suitable for use with both the BBC and the Electron.

The monthly disc listings contain our new-style

index and header, and some more graphics screens, a bargain at £5.95.

The discs are supplied in 5.25in 40-track format, and conversion instructions are included for 80-track users. And Electron owners – remember the monthly disc is fully compatible with the advanced Plus 4.

Finally, if you subscribe to the Micronet service, don't forget that you can download the month's disc listings for just £5.00, and you'll avoid the vagaries of the post!

Two free discs worth £11.50 when you subscribe to our monthly listings disc

Digitised portraits in the graphics bonus

Hurry – this is your last chance to take advantage of this really special offer, as after September 30, 1986 we will not be able to accept applications for 14 discs for the price of 12.

Take advantage now and you will receive 14 monthly discs of listings at less than £5.00 each. A real saving, but only when you subscribe before this special offer ends.

Overseas readers should add £7.00 for surface mail (and airmail to Europe), or £15.00 for airmail delivery (to the rest of the world).

The discs contain all the program listings presented in each issue of *Acorn User*, so you don't have to type in the listings from the yellow pages – which saves you time, as well as money. Just load the disc and off you go.

Plus there's an added bonus – each month the discs contain exciting graphics screens, including some of those featured in the magazine. You can see one of these graphics screens pictured to the left.

Back issues of the monthly disc are available from October 1985.

Free cassettes worth £7.90 when you subscribe to our cassette listings

Home sweet home with Rob Fenton's program

This is your last chance to receive a free Graphics cassette and a Best of Acorn User cassette when you subscribe to our monthly listings cassettes, as this offer closes on September 30, 1986.

Our cassette will save you the time and trouble of keying in our monthly listings from the yellow pages, leaving you free to get on and enjoy the month's programs.

And, don't forget, our offer will also give you the time to enjoy your free cassettes.

The Graphics cassette includes: Rob Fenton's

painting program; designing sprites, written by Harry Sinclair; using the colfill and dotfill routines to colour fill, written by Peter Sandford. And what could be more useful than the pie and bar charts also written by Peter Sandford?

When you've finished with the Graphics, why not go on to the Best of Acorn User cassette, a comprehensive selection of 11 of our best program listings, including the Quadline and Picture Slide games, sideways RAM utilities, an all-mode graphics dump, tape to disc transfer and much more besides.

Telephone Orders 01-836 2441 9.30am to 5.00 pm. Ask for Seran. Order form on page 111

MAGAZINES & BINDERS

ACORN USER OFFERS

Three issues free—when you subscribe to Acorn User magazine

15 magazines for the price of 12

If you've enjoyed reading this issue of *Acorn User*, the biggest and best-selling BBC/Acorn magazine, why not ensure you receive your monthly copy regularly by subscription?

At the same time you'll be able to take advantage of our super special offer, and receive 15 issues of *Acorn User* magazine for the price of 12.

How else can you make sure you are up-to-date with the latest innovations, news, reviews and features. Stay in touch each month with *Acorn User* magazine, the biggest and the best!

You'll find articles covering education, business and home use, and there's a special section for new users. There are articles, hints and listings for all Acorn machines – BBC B, B+, Master, Electron and Atom. In fact, something for everyone.

This offer is only open to readers in the UK and the Republic of Ireland.

If you are an overseas subscriber turn to page 111, so that you can take advantage of our two-year rate offer. We will send you 27 issues for the price of 24, when you pay the two-year price.

Acorn User Magazine Back Issues—£1.75

Classic issues from yesteryear

The following back issues are available by using the order form on page 111:

1984:	May	August	November
	June	September	December
	July	October	
1985:	January	June	October
	March	July	November
	April	August	
	May	September	

1986:	January	April	July
	February	May	August
	March	June	September

Send an A4 stamped addressed envelope for further details of back issue contents of *Acorn User* to Seran Anderson Haddick, Acorn User Merchandise Department, 141-143 Drury Lane, London WC2B 5TF.

Disc Binder and Slip Case £9.95 and Magazine Binder £4.95

Magazine binder and disc binder

What better way to protect your *Acorn User* monthly disc listings, or your own programs, than in the safety of this fine grey cloth disc binder?

The binder is lined in grey, and has a 30mm capacity, big enough to hold 12 monthly discs comfortably. The spine of the binder features a discreet silver *Acorn User* logo.

Included with the disc binder are six transparent inserts, each capable of holding two 5¼" discs. Last, but most importantly, there is a sturdy slip case, which will protect the binder and the discs within.

Never lose another issue and keep your *Acorn User* magazine collection in style, with this fine red *Acorn User* magazine binder.

The magazine binder features a wide spine with the capacity to hold 12 issues of more than 200 pages. The magazines are held in place with metal strips, which will allow you to fit your monthly magazine with ease.

Keep your precious back issues in safety, filed in order so that you can easily refer to them. You'll find the order form for binders on page 111.

Telephone Orders 01-836 2441 9.30am to 5.00 pm. Ask for Seran. Order form on page 111

SPECIAL PROGRAMS

ACORN USER OFFERS

Acorn User bibliography on disc – from £7.95

A page from the bibliography

If you've ever spent hours looking through your copies of *Acorn User* for an elusive article, which you know you've seen but can't remember when or where, then what you need is the *Acorn User* bibliography!

Our bibliography contains information on where to find games, listings, educational and utility programs; reviews of hardware, firmware, peripherals, software and books; and feature articles of specific and general interest. You'll even find reference to readers' letters!

The *Acorn User* bibliography is sold in parts, in a specially enhanced format, which will make your searches even faster, taking about 15 seconds on the 40-track and 40 seconds on the 80-track disc. Location of a reference is by one- or two-string searching and the user may specify the starting month and year. Output may be to screen or printed.

There are three parts currently available; a further instalment, part 4, will become available later in the year.

Acorn User Gallery Disc – super graphics for only £6.95

Galley on the Gallery Disc

The *Acorn User* Gallery disc has proved to be immensely popular since its introduction in the August issue. It features an automatic scrolling display of over 20 stunning graphic screens.

What's more, the disc gives you the chance to dabble with a little creativity, by using the Super Painter and Pixel Editor.

These clever graphics creating programs, included on the disc, allow you to alter and edit these pictures as you like, and also give you the chance to concoct your own designs.

You can marvel at Spiderman, see the Coke can come alive, plus Robotic Brilliance, Astronaut, Elite, Wimp Fashion, Max Headroom, Sunrise, Thomas the Tank Engine, and many more screens.

And don't forget you can use our *UserDump* ROM to print all these fabulous screens too!

The Gallery disc is available as a single 80-track disc or two 40-track discs containing over 400k of graphics in under half the disc space, and costing just £6.95.

Graphics Cassette and the Best of Acorn User Cassette – £3.95

One of the Best of AU

Enormously popular and immensely useful, the Graphics cassette at a bargain price of £3.95 includes the following programs for your delight: Rob Fenton's painting program (Feb 1985), Peter Sandford's Colfill and Dotfill (Jan and Feb 1985) and Harry Sinclair's Sprite designer (Sep, Oct and Nov 1984). And all available on one cassette, suitable for use on the BBC and the Electron.

What could be more useful than the Best of *Acorn User* cassette? A comprehensive selec-

tion of 11 program listings, which includes Malcolm Banthorpe's Turtle Graphics, an easy introduction to Logo; an all screen mode printer dump for Epson and Epson-compatible printers; a bad program recovery routine; a selection of sideways RAM routines, two games, plus much much more! Suitable for use on the BBC and the Electron.

Graphics and Best of *Acorn User* are the first two cassettes in our special cassette range. you'll be seeing further offers later in the year.

HA21

Telephone Orders 01-836 2441 9.30 am to 5.00 pm. Ask for Seran. Order form on page 111

ROMS

ACORN USER OFFER

UserDump and UserROM only £19.95 each

ACORN USER PRINTER CONTROL

Dump your graphics with UserDump

ACORN USER ON A CHIP

UserROM's dot fill routine

UserDump includes a ROM chip which plugs into any free ROM socket on your BBC micro, and an easy-to-use manual. With *UserDump* you'll have access to a wide range of commands to help you control your printer's facilities – all for just £19.95.

You will be able to dump any screen image in any display mode by entering a single command – either as a line of your program or typed in direct from the keyboard. *UserDump* will also give a perfect dump while a machine code program is running.

UserDump will work with all the popular dot-matrix printers including: Epson MX, RX, FX, JX; Star Gemini, Delta, SG, SD, SR; Canon NLQ; Kaga NLQ. Mannesmann-Tally Spirit 80 and Lucas 80. Plus printers with single and double density bit-image graphics, including CP80 and JX80 colour printers.

UserDump provides commands such as:

- *SDUMP – dumps whole screen in any mode
- *WDUMP – dumps graphics window
- *CDUMP – very fast screen dump
- *TDUMP – dumps text window in any mode
- *WINDOW – defines graphics window from keyboard
- *TRANSTT – converts teletext screen into mode 1
- *LPRINT – directs all print commands to the printer only
- *SHIFT – shifts an area of memory

The *Acorn User UserROM* brings the best of *Acorn User* into your micro. Put together by our technical editor, Bruce Smith, this 8k ROM chip is packed with your favourite *Acorn User* routines. Simply plug the ROM chip into a spare sideways ROM socket and all the routines are instantly accessible via easy-to-use *commands – what could be simpler?

Routines include the popular colour fill and dot fill routines, bad program recovery, variable lister, function key lister, a graphics compiler, a circle drawing routine, a bulletin board, screen compressor, on screen character fonts, ROM lister, sound compiler, plus lots, lots more!

Included with *UserROM* is a 22-page manual which explains in clear simple terms how to get the most from your *UserROM*, and you'll find many demonstration programs showing how to use the new commands.

UserROM gives the following extra commands: *BORDER

- | | |
|----------|-----------|
| *CHECK | *CIRCLE |
| *COLFILL | *COMPRESS |
| *DOTFILL | *EXPAND |
| *EXPLODE | *FKEYS |
| *GOFF | *GON |

YELLOW PAGES

INDEX / COMPATIBILITY

Entering listings

To make the task of entering listings easier, *Acorn User* has adopted several standards in the Yellow Pages. Programs are listed with line numbers in increments of 10, so type AUTO <Return> for automatic line numbering before you start. Before you list what you've entered, type LISTO 1 <Return> to provide spaces after the line numbers. Programs in the Yellow Pages are often listed to a width of 40 characters, so type MODE 6 <Return> before you start. Comparing the line-endings of your listing with the Yellow Pages will help you spot extra or missing characters.

To make sure that the program you want to enter will work on your particular machine, check the index below. All the listings work with Basic 1, 2 and 4 (unless stated otherwise) and with operating system OS1.2 or above. If a program is accompanied by an article, please read the article first. If special care is needed when entering a listing, we provide a 'How to Enter' box.

Once you've typed in your program, save it to tape or disc then test it by running it. If you've made a mistake, an error message will probably appear, telling you which line contains the error. List the line and check it carefully against the published version.

If the line is the start of a procedure definition - eg, 1000 DEF PROCfred - the error may be at another line which calls the procedure. For further help with debugging, refer to First Byte in the April 1986 issue.

A-MAZE-ING

118

An imaginative and addictive 3D maze game by David Lawrence. Read how to play the game on page 88.

ON THE MENU

115

From a simple ten-liner to a sophisticated program, Joe Telford shows how to create versatile menus on page 81.

CLEVER CALLIGRAPHY

121

Print large-size ornamental lettering on your dot-matrix printer with graphics software by Mike Turner. Article: page 93.

DISCS AND TAPES

All the listings on these pages can be found on this month's listings disc or cassette. See page 107 for details.

(b) Needs sideways RAM. Enter and Run with Page set to &1200.

YELLOW PAGES

HINTS & TIPS

How to enter Hints & Tips

The six listings from this month's Hints & Tips are designed for use on any BBC Micro, Electron or Master machine with an Epson-compatible printer. As with all the programs in the yellow pages, we advise that you read carefully the article they accompany. Listings 5 and 6 contain sizeable sections of machine code and so checksum routines have been included to help you spot any typing errors.

See Hints & Tips, page 50

How to enter Romfile

Type in the main program as shown. The listing includes a fair chunk of assembly code and the program contains its own checking routines. If a typing error has been entered you will be notified when the program is run. A message displaying the section of program at fault is also given. All users (except tape users - see below) should type in the program with PAGE set to &1200. This is done by typing:

```
PAGE = &1200 <RETURN>
NEW <RETURN>
```

and then copying out the listing.

Tape Users

If you plan to use the Romfile system on a tape-based machine, several adjustments need to be made to the program. Notes on doing this, with a list of the lines that need to be amended, are given in the article on page 104.

Electron users with Sideways RAM

The program as it stands will not operate correctly on an Electron, however, a version specifically for this machine has been supplied on the monthly cassette on side 2.

YELLOW PAGES

JOE'S JOTTINGS

See On the Menu, page 81

How to enter Joe's Jottings

PROCdouble in listing 5 (starting at line 330) should be added to listings 6-8 as well. Type in PROCdouble separately starting at line 2000, and then spool it to a file on disc or tape, by typing in:

*SPOOL double <RETURN>

LIST 2000, <RETURN>

*SPOOL <RETURN>

Then to add PROCdouble to listing 6, load this in and type:

*EXEC double <RETURN>

Now save the complete program. Repeat for listings 7 and 8.

The four sound procedures given in listing 10 should be added to each of listings 1 to 9 using the technique outlined above.

Listings on cassette and disc

If you think that keying-in all these listings will get you down and your fingers in a tangle, why not save your time and energy by sending off for our monthly listings cassette or disc? Our monthly cassette holds all the programs featured in the yellow pages. The monthly listings disc also includes a graphics bonus.

The cassette tape for the BBC micro or Electron cost just £3.95, a disc for the BBC is priced at £5.95. (For more information see page 107.)

It is possible to subscribe to the Acorn User monthly listings cassette (£45 for UK subscribers, see order form page 111). If you do so now we will send you our two special cassettes, worth £3.95 each (see page 107 for details).

The two cassettes are the entertaining and ever-popular graphics cassette and the comprehensive selection of 11 programs contained in the Best of Acorn User.

See A-maze-ing, page 88

We will accept your BBC computer, any age, any condition, even non-working, in part exchange for any product we normally hold in stock. This offer applies to both BBC products and Amstrad computers.

A selection from our product range is shown here, and as you can see, our prices are very competitive. The allowance you can expect for your machine is detailed in the table opposite.

Just send your BBC (and manual please) to us with a cheque or credit card number, and provided we have the item you require in stock (please phone to check), it will be sent by return.

This offer means that Compshop has a number of second hand BBC 32K machines for sale, all with 3 months warranty. So if you want a BBC but can't afford a new one, phone us for prices and availability.

ALL PRICES INCLUDE VAT CARRIAGE ON ANY ITEM POST - £3.00 COURIER - £10.00

ALLOWANCE ON YOUR OLD MACHINE

	MORE THAN TWO YEARS OLD	TWO OR LESS YEARS OLD
WITHOUT ACORN DISK INTERFACE	£125	£175
WITH ACORN DISK INTERFACE	£175	£225

PLEASE DEDUCT £25 IF YOUR BBC HAS ANY FAULTS

COMPSHOP PRICE PROMISE
- We guarantee to match the price on equipment offered from stock through any other supplier.

COMPSHOP was established in 1978 and has continually offered the best in micro computers to discerning customers.

Educational enquiries and orders welcome.

Quotations given.

One year warranty on all products.

We sell only computers and peripherals, and therefore can offer the support many other shops cannot.

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available - 22000 matches over 10 years. The database updates automatically as results come in.
- **PREDICTS** - Not just SCOREDRAWS, but ALWAYS, HOMES and NO SCORES.
- **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
- **ADAPTABLE** Probabilities are given on every fixture - choose as many selections as you need for your bet. The precise prediction formula can be set by the user - you can develop and test your own unique method.
- **SIMPLE DATA ENTRY** All team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
- **DISC/MICRODRIVE COMPATIBLE** Tapes supplied with conversion instructions.
- **PRINTER SUPPORT** Full hard copy printout of data if you have a printer.

PRICE £15.00 (all inclusive)

NOW AVAILABLE

FIXGEN 86/7

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1986/7. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner. Yearly updates available.

POOLSWINNER with FIXGEN £16.50 (for both)

COURSEWINNER V3

THE PUNTERS COMPUTER PROGRAM

NOT JUST A TIPSTER PROGRAM, Coursewinner V3 can be used by experts and occasional punters alike.

You can develop and test your own unique winning system by adjusting the analysis formula, or use the program in simple mode. Coursewinner V3 uses statistical analysis of major factors including past form, speed ratings, course statistics, prize money, weight, going, trainer and jockey form etc. It outputs most likely winners, good long odds bets, forecasts, tricasts etc. The database includes vital course statistics for all British courses. You can update the database - never goes out of date.

PRICE £15.00 (all inclusive) includes Flat AND National Hunt versions.

ALL PROGRAMS AVAILABLE FOR: AMSTRAD CPCs, AMSTRAD PCWs (ADD £3.00), ALL BBCs, ALL SPECTRUMS, COMMODORE 64/128, ATARI (48K+), SINCLAIR QL

Supplied on tape (simple conversion to disc) - except PCW (on 3" disc) and QL (on microdrive)

GAMES

A BLAST OF FUN

'Deathstar', Superior, BBC B/B+, £9.95 (cassette), £11.95 (disc). Version reviewed: BBC B

There's nothing particularly novel about this piece of software, but it's written to the high standards we've come to expect from Superior, is enjoyable to play and has a high addiction factor despite its lack of originality.

It's a high-speed arcade game that revolves around a revolving space ship. You use two keys to spin it clockwise or anti-clockwise, *Asteroids*-style. Left to its own devices, it will accelerate off in whatever direction it's pointing, whereupon the screen scrolls impressively smoothly. Your spacecraft shares the cosmos with some lumpy planetoids, some nasty red Worker ships and some even nastier blue Warrior ships. Their job is to collect crystals from the planetoids with which to build a Deathstar, an unsightly object which will try to annihilate you. Your job is to collect the same crystals to make Starbombs, which are your only defence against the Deathstar. You mine crystals by blasting the planetoids with a laser, which also comes in handy for blasting Workers and Warriors.

That's about all there is to it, rotating and blasting. Doesn't sound like much fun, does it? But it is. For one thing, everything happens pretty fast, and it's a real white-knuckle job keeping your little ship under control and firing your laser. For another thing, there's a constant tactical problem to resolve.

The mode 5 graphics are as elegant as they need to be, and the animation is as zippy as the sound is zappy. Although there's nothing surprising or revolutionary about *Deathstar*,

it's a neat demonstration that an old formula, when cleverly handled, can still produce a thoroughly enjoyable game.

Jeffery Pike

KNOCKOUT IT'S NOT

'Tennis', Bug-byte, BBC B/B+/Master/Electron, £2.99 (cassette only). Version reviewed: Electron

As a tennis fan I was delighted to receive this game but soon discovered that, despite its success in the software charts, this was a case where low price meant low quality.

The inlay card promises five opponents of reputedly increasing skill, but I haven't yet seen anyone get past the first round opponent, Manuel Fawly. Your viewpoint is from behind your own player who's controlled with four directional keys plus Space to hit the ball.

In theory the game sounds promising – all the expected facilities seem to be here: a ball boy to collect stray shots (always mine), a giant electronic scoreboard, sound and 3D graphics. However, this is the kind of program which gives budget games a bad name – the graphics are crude and unconvincing mode 5 chunks, there's no two player option, the use of sound is indescribably poor, and, worst of all, the response from the keyboard is pathetic.

Maybe, I thought, things would get better with practice. And here *Tennis* proved its complete lack of potential – the game is not only utterly boring, it's also so difficult, in both Electron and BBC versions, that I didn't manage to win a single game.

By then I think even the micro had had enough. I certainly had.

Bernard Emblem

UNINSPIRED POND LIFE

'Savage Pond', Bug-Byte, BBC B and Electron, £2.99 (cassette). Version reviewed: BBC B

Savage Pond is a poor attempt at making something out of nothing. The game is really a simple arcade game that involves you in little more than whizzing around the screen trying to avoid some blobs and hit others.

The scenario is anything but simple and explained very badly in the cassette sleeve notes. You are a tadpole. Not surprisingly you are very pro-frog. The idea is to build up a colony of frogs in the local pond.

It's all very educational. You have to eat worms and amoeba and avoid the stinging hydra and the dragonfly nymphs. Dragonflies doing flypasts drop eggs which you must knock off before they hatch and other equally fascinating events occur in the busy life of the pond. Even mankind gets a look-in by dumping radioactive waste.

It is true that the screen display in this game is very pretty (though rather reminiscent of a David Bellamy programme) and the movement of all the various characters is smooth and responsive to the control of both joystick and keyboard. The colours are vibrant, the characters well designed, and so on. However, the game itself is totally uninspiring.

Bug-Byte was a big name in games software about two years ago – and not just for the BBC micro market. The name died out but has been resurrected by Argus Software. If *Savage Pond* is a typical example of the kind of material behind the comeback I suspect we shall not be hearing much more from them.

DOUBLE PHANTOM?

YES! This IS the program demonstrated on BBC TV's "Micro Live". The Worlds first micro multi-user combat flight simulation is now available direct from DOCTOR SOFT via our 'HOT LINE' FIRST CLASS MAIL ORDER service.

DOUBLE PHANTOM is basically a TWO computer version of the highly acclaimed PHANTOM COMBAT simulation. At least one BBC must have a disc system. A hardware link (included) then links the machines which become separate aircraft sharing the same airspace, each VISIBLE and VULNERABLE to the other!

DOUBLE PHANTOM has all the usual PHANTOM features including the fastest and smoothest 3D colour graphics around (15fps). RAF Phantom pilot Paul Courtneage's verdict: "Marvellous ... quite the best micro flight simulation I've ever seen ... Totally captivating!"

Phone: Mail Order Hot line 0903 776000 with VISA/ACCESS. Mail: PO BOX 66, East Preston, West Sussex BN16 2TX. Most orders despatched SAME DAY, FIRST CLASS, POST FREE.

CURSOR X 64
CURSOR Y 64
U LAST P
BUFFER 992

'The Graphic Adventure Creator', Incentive Software, BBC B and B+, £22.95 (cassette), £27.95 (disc). Version reviewed: BBC B

Ever felt you had a great idea for an adventure but were put off by the programming? Incentive Software has come up with the answer by producing – in effect – a programming language specifically for adventures.

That's perhaps overstating it a little. What the program does is to allow you to build up the substance of an adventure – the commands, the descriptions, objects and events, while taking care of the nitty-gritty.

The software handles things like the language parser – which makes sense of what the player types in. It also allows you to build up the plan of the adventure very easily. Creating a room is a simple matter of giving it a number, writing a description and then saying what exits there are.

You can also assign a screen display to each room. These are created with a simple artist program and stored in a separate file. You also give the system a list of words, including verbs, adverbs, nouns, objects and so on. Then comes the clever part. You can write rules associated with the words, the objects and the room, so that quite complex interactions can be built up. The method of creating the rules is faintly reminiscent of Prolog.

Tricky things, such as routines to save and load the current game position, and linking rooms and objects, are all handled by the system. At any time you can save the adventure to disc or tape so that you can resume work on it later. And when the game is finished it is saved as a stand-alone file, which is started by typing *RUN <filename>.

There are many sophisticated features to this program. The important thing, however, is that it frees adventure writers from the drudg-

ery of coding and allows them to concentrate on the imaginative and creative side of the process. Highly recommended.

Steve Mansfield

FIVE-MINUTE WONDER

'Winter Olympics', Tynesoft, BBC B and Electron, £7.95 (cassette), £11.95 (disc). Version reviewed: BBC B

I was looking forward to this game, eagerly anticipating the stunning scenery of the Alps and the terrifying thrills of some of the fastest sports on Earth.

Sadly, it didn't happen. The scenery is virtually non-existent, with just one recognisable mountain throughout the whole of the five events.

As for the thrills – well, the games do get fast sometimes. But the graphics are too jerky and awkward to make you feel you're ever really in control.

The first event is speed skating. If you're playing by yourself, ignore your opponent as he's just there for decoration (if you can call the simple graphics decorative).

Next up is the ski jump. The action is thankfully short-lived here, but at least the mountain in the background is pretty. The next event is the ski slalom, where you have to aim between the flags. Then comes the downhill ski-ing, which is more of the same but without the flags and with a few more trees.

You're now on the Cresta Run. Two graphics are used here – a small and crude 3D window on the run, and a map showing your progress. Again the graphics are jerky and, when you crash, positively ridiculous.

For me, there was a five-minute wonder. I was amused the first time through, but quickly got bored. And the constant reloading of events was a real pain.

Steve Mansfield

HAPPY EVER AFTER

'Jack Attac', Bug-Byte, BBC B and Electron, £2.99 (cassette). Version reviewed: BBC B

The Jack of the title is he of beanstalk fame. As Jack, you have to run around the beanstalk and the giant's castle to rescue your sweetheart, Jill (a sad case of mixed-up nursery rhymes, this). Now, I tell you all this because you'd never guess it from the screen picture.

Plot aside (and who can seriously say they buy a computer game for the plot?) *Jack Attac* is fun enough. It's fairly standard stuff. There is a seemingly endless supply of screens, all interconnected and filled with an assortment of ladders and platforms and the odd nasty. Jack must trot around these searching for Jill. Of course, some parts of this maze of bean foliage are blocked from Jack's path by locked doors and so Jack must find the keys for these first.

Once the final key is found the giant wakes up and Jack must rescue Jill, escape from the castle and climb down the beanstalk all in two minutes, before he can get down to the serious matter of living happily ever after.

So, let's face it, there's nothing very new here. However, it works. There is a strange addictive quality about games like this. The movement of Jack and the few moving baddies which infest the beanstalk is very slick and the controls nice and responsive. It's true that the whole game did crash once, insisting on drawing every screen on top of another (not a pretty sight) but that all adds to the excitement.

Jack Attac's standard of presentation is laughable. There are mistakes on the cassette sleeve and in the game's opening pages and Bug-Byte can't seem to decide if it's 'Attac' or 'Attack'. I can't give full marks for a game with these kind of errors and such a lack of originality, but it's cheap and fun to play.

SOFTWARE

MAKING CONNECTIONS

Geoff Bains experiments with electronic circuits on screen

A major problem with the teaching of electronics is that practicals tend to become bogged down in the complexities of interconnecting components rather than with the real business of what is going on. Transistors are fiddly to connect up in the complexity that is needed to do anything useful and integrated circuits confuse pupils with their layout of inputs and outputs – they're so different from the easily remembered block diagram found in the text books.

There are ways of getting around this

Enter your digits . . watch the voltmeter

problem. Griffin and George's *Digital Units* put the uninviting components away inside little boxes which connect together in the same way as a block diagram. However, there still remains the problem of expense and time spent setting up a complicated piece of apparatus to demonstrate a simple point.

Addison-Wesley's *Digital Electronics* course aims to teach electronics without any of these problems by using computer-simulated experiments on the micro.

The course is aimed at secondary school level and at ITECs and further education colleges. It is very much biased towards modern electronics and computers and is in three units – Coding Information, Digital Systems and Microprocessor Systems. Each unit comprises a student's booklet and 40-track disc containing the experiment simulations. The first unit costs £14.95, the other two £19.95, and a complete pack of all three £49.95 (all excluding VAT). All three units are eligible for DTI support.

The unit looked at here is the first of the course – Coding Information. This is designed to introduce students to the idea of digital data

A classic benchtop circuit on the micro

and the fact that computers are just a means of processing on-off binary signals.

The unit booklet is about 20 pages long and both teaches and tests students. It is split into six sections which cover the nature of digital data, digital representation of analogue information, logic gates, digital arithmetic, computer (ie, ASCII) codes, and simple computer control language.

Each section is riddled with simple questions to test that what has just been taught has really sunk in. The answers to the questions are given at the back of the booklet – perhaps a dubious advantage.

Dotted around the booklet are four computer-simulated experiments/demonstrations, which strikes me as too few. It is all very well restricting practical time to the minimum when half that time is 'wasted' on setting up and connecting together the apparatus, but when the whole point of the course is to restore some sense to experiments by undertaking them on the computer screen, it is surely more sensible to make the most of it and capture the students' imagination and interest with as many experiments as is reasonably possible. To include fewer than one per section seems to me ludicrously unambitious.

However, four experiments it is. The good news is that the programs are compatible with just about anything (Basic 1 and 2, and B+ and Master) although the last experiment has problems with active shadow RAM or second processor. The whole disc is unprotected, so allowing a backup or tape copy to be made.

The first experiment is one which would normally be a mind-boggling hassle to arrange 'for real' but on the micro is quick and easy.

This is a demonstration of digital to analogue conversion. The screen shows a block diagram circuit of DAC connected to a voltmeter. Numbers can be entered into the DAC and their effect on the meter watched. It's simple but effective.

Similarly the second experiment is a classic 'real' benchtop circuit transferred to the micro-computer. This demonstrates the AND and OR gate, using four keys on the Beeb's keyboard to supply the two input states to each gate. The result is then displayed on the block circuit diagram on the screen.

The third program demonstrates simple eight-bit addition, subtraction, and arithmetic shifting on a byte. Doing a demonstration such as this with real hardware would be bound to become far too involved with the circuit which makes it all possible, rather than concentrating on the result.

The fourth experiment is one which would be far too complex for construction in the laboratory, anyway. This program implements a simple Logo-like language to control a range

Eight-bit arithmetic made simple

of inputs and output on the screen. The language is simple, with only about 10 commands, but the ability to define new words makes it both fascinating and instructive.

It would be foolish to pretend that computer simulations can totally replace real-life experiments in any subject. However, the *Digital Electronics* course does demonstrate what can be done. It is only a pity that more experiments were not included.

Digital Electronics: Unit 1, £14.95; Units 2 and 3, £19.95 each; complete pack, £49.95 (all exc VAT)
Addison-Wesley, Finchampstead Road, Wokingham, Berks RG11 2NZ. Tel: (0734) 794000

PINEAPPLE SOFTWARE

Programs for the BBC models 'B' with disc drive with FREE updating service on all software

DIAGRAM

Still the only drawing program available for the BBC micro which gives you the ability to draw really large diagrams and scroll them smoothly around the screen stopping to edit them at any time if required.

Pineapple's unique method of storing the diagram information on disc means that the size of diagrams is limited only by the free space on disc, and not the amount of computer memory you have available. (A blank 80 track disc will allow up to 39 mode 0 screens of diagram).

The superb print routines supplied with the program enable large areas of the diagram to be printed in a single print run in a number of different sizes and rotated through 90 deg. if required. Full use can also be made of printers which have a wider than normal carriage available.

The program is fully compatible with the Marconi Tracker ball described below.

PLEASE STATE 40 or 80 TRACK DISC & WHETHER STANDARD BBC or MASTER VERSION IS REQUIRED

PRICE £25.00 + VAT

DIAGRAM UTILITIES

A suite of six utility programs which add additional features to the 'Diagram' drawing program. The utilities include the saving and loading of areas of diagram to and from disc. The ability to display the whole of your large diagram on the screen at one time (in either 4*4 or 8*8 screen format). The addition of borders and screen indents to diagrams, and the ability to shift a whole diagram in any direction.

PRICE £10.00 + VAT

MARCONI TRACKER BALL

This high quality device comes with its own Icon Artmaster drawing program and utilities to enable it to be used in place of keyboard keys, joysticks, or with your own programs.

PRICE £60.00 + VAT p&p £1.75

PRICE INCLUDING 'DIAGRAM' SOFTWARE £79.00 + VAT p&p £1.75

TRACKER BALL for MASTER series

The Pointer ROM is supplied instead of the Icon Artmaster disc and enables the Tracker ball to work directly with the MASTER series computers. (e.g. to use with TIMPAINT etc.). Prices are the same as for the standard tracker ball.

POINTER

The Pointer Rom is available separately for people already owning tracker balls, and comes with instructions for use with the MASTER computer.

PRICE £12.50 + VAT

PCB

This new release from Pineapple is a printed circuit board draughting aid which is aimed at producing complex double sided PCB's very rapidly using a standard BBC micro and any FX compatible dot-matrix printer.

The program is supplied on EPROM and will run with any 32k BBC micro (including Master series). Also supplied is a disc containing a sample PCB layout to demonstrate the programs features.

By using an EPROM for the program code the maximum amount of RAM is available for storing component location and ASCII identification files etc. (Up to 500 components and 500 ASCII component descriptions may be stored for a given layout). These is no limit to the number of tracks for a given PCB, although the maximum size of board is restricted to 8" * 5.6".

Using a mode 1 screen, tracks on the top side of the board are shown in red, while those on the underside are blue. Each side of the board may be shown individually or superimposed. A component placement screen allows component outlines to be drawn for silk screen purposes and component numbers entered on this screen may be displayed during track routing to aid identification of roundels.

The print routines allow separate printouts of each side of the PCB in a very accurate expanded definition 1:1 scale, enabling direct contact printing to be used on resist covered copper clad board.

This program has too many superb features to describe adequately here, so please write or phone for more information and sample printouts.

PRICE £85.00 + VAT

CONVERTER LEADS

Converter leads to enable the Trackerball to run mouse software and the mouse to run trackerball software (inc. DIAGRAM). Please state which way round when ordering.

PRICE £8.00 + VAT

BASIC COMPILER

Use our Basic Compiler to produce direct 6502 machine code programs and ROMs for your own Basic programs. Speed increases of up to 25 times are achieved.

PRICE £25.00 + VAT

SOFTWARE

MICRO MELODY MAKER

Jeffery Pike gets dots before the eyes with a new music package

There are numerous music packages around, on ROM, disc and tape, all designed to make the most of the Beeb's sophisticated four-channel sound facility. They all have their good points and their shortcomings. Some make inefficient use of memory and can only handle short tunes; others are cumbersome and difficult to operate; others demand either a well-developed musical imagination or a high degree of programming skill.

Writing tunes

It must be said straight away that *Musicpen* is of little use to anyone unfamiliar with reading and writing conventional music. If you can't read the dots, you won't know the score (geddit?). Entering the music editor from the menu, you first select a key signature (from a choice of nine – why not all 12?) and a time signature (2/4, 3/4, 4/4 or 6/8 – not comprehensive but adequate for most uses). It isn't possible to alter these within a piece of *Musicpen* music, so if you start in waltz time in the key of F, you're stuck with it throughout.

Then you're presented with a display of treble and bass staves waiting for your masterpiece to be written on to them (figure 1). Notes and rests are easily entered by a combination of function keys, cursor keys and the space bar, and appear on the staves as orthodox notes – well, nearly orthodox, for the note stems often stick up when they'd normally go down, and quavers and semiquavers are not joined by their tails where you'd expect them to be. A nice feature is the way that, as you enter notes, rests appear towards the end of each bar (barlines are drawn automatically), to let you know what note values are needed to fill it exactly. You can jump easily from one voice (channel) to another, so you can write one line at a time or fill in your counterpoint or harmony as you go along. The second or third voices dutifully appear at the right vertical position in the bar.

Musicpen is unique in its ability to accept data from a light pen. I have to confess that I don't own a light pen, so I was unable to try entering music by this means. But I tried the joystick option – and it didn't work. After configuring my joystick as instructed, I found I could jump forwards from bar to bar, but couldn't enter notes or move backwards. Let's hope that this is just a teething problem in the prototype. In

Figure 1. Notes and rests in the Editor

any case, keyboard entry is very straightforward when you get used to it.

Editing

When it comes to editing music, you can't jump to any point in the tune, only forwards or back to the adjacent note or the adjacent bar, or to the very beginning, or the very end. To make matters worse, auto-repeat is disabled for the cursor keys, so it can be a laborious process stepping bar-by-bar through a long piece. But once you get there, it's simple to alter the pitch or length of a note, or to delete it completely. And those useful rests pop up automatically to make everything 'fit'.

When you're entering or editing music, it's vital to be able to hear bits of it as you go along. The playback facility of *Musicpen*, like everything else about it, has its good and bad features. You don't need to start from the beginning: you can play back from wherever you left the cursor. You don't need to hear all channels at once: you can select any one, two or all three to listen to. On the minus side, you can't transpose the music up or down once it's written (as you can with some music software). More seriously, there's a very limited choice of tempo – only six options, ranging from not quite slow enough to not quite fast enough.

Envelope editor

Musicpen doesn't provide a set of predefined envelopes as some music programs do. You start with an even, characterless sine wave on all three channels, then use the envelope editor to create your own sounds. That's when the fun really starts. If you've had problems in the past unravelling the *User Guide's* explanation of

the Beeb's 14 envelope parameters... this won't help much.

You enter the envelope editor (quaintly called 'synthesizer') from the menu, to be confronted with a display that's trying to look like a graphic equaliser. The 13 sliders represent the parameters of the envelope command (without the first one, the envelope number) – but it's fiendishly difficult to relate them because they're displayed in a different order, with different names. If you've spent hours trying to memorise the parameters, it's distressing to find them laid out in a new sequence. It would help if the sliders at least had the same names – ALA, ALD, etc, instead of ATK TARGET, DCY TARGET, etc.

Once you've figured out which is which, it's easy to adjust each one with the cursor keys to form a new envelope. There's a play facility so you can hear how it sounds and a useful 'demo' feature which plays the sound repeatedly while you juggle the parameters.

But when you've constructed some mellifluous new envelopes, it's frustrating to discover that you're limited to a maximum of three, one for each channel. You simply can't edit a new one without losing (or saving) one of the three. It follows that your music can't draw on a library of envelopes, or change tone as it plays.

Incidentally, there is the possibility of using a fourth voice throughout, with the Beeb's notorious noise channel. But *Musicpen* is no more successful than anyone else has ever been at incorporating its limited range of squelches and hisses into euphonious music.

Other functions

A piece of music can be easily printed out on an Epson-compatible printer, and both tunes and envelopes can be saved and loaded from disc or tape. The 60-page manual goes into considerable detail on saving and loading files, stating all the obvious things that we should all know anyway. In fact, Sahlan Diver, the author of the software and the manual, seems to assume throughout that the user will have a fair degree of musical knowledge but a limited amount of computer experience. If that describes you, this could be the music-making software for you.

Musicpen, £28.75 (16kROM), by mail order from CNC, 41 Cheney Way, Chesterton, Cambridge CB4 1UE. Tel: (0223) 322244.

VERSATILE CAD/CAM

For the BBC Micro

A sophisticated, menu driven, user friendly CAD/CAM package with many facilities for very accurate drawing construction and data extraction for Numeric Control (NC) post processing.

CAD System (EDUCAD) - £80 (ex. vat)

- * geometric/schematic drawings
- * zoom, scale and units control
- * text/symbols, any size and angle
- * mirror and duplicate
- * generalised x-y plotter output
- * area properties

- * construction/modification
- * text/symbol font editor
- * intersects and tangents
- * rubber banding
- * graphics screen dump
- * revision/material info. editor

CAM System (EDUCNC) - £35 (ex. vat)

- * part geometry from EDUCAD
- * tool path animation

- * part profile definition
- * generalised NC post processor

Both packages have explicit input prompts and error messages. This together with over 80 pages of online HELP data makes these systems easy to use and easy to learn - an ideal way of introducing this new technology.

CROSSWARE

SOFTWARE DEVELOPMENT TOOLS FOR THE BBC MICROCOMPUTER

CROSS · ASSEMBLERS

FULLY SUPPORTED QUALITY SOFTWARE

Assemblers and Disassemblers on ROM

The BBC Microcomputer is an impressive machine, especially the new Master 128 running with the hierarchical Advanced Disc Filing System. Our software allows full use of its advanced facilities. For example, source code modules held in separate files of any name in any directory on any drive can be linked and assembled to create your machine code program in Motorola S, Intel hex or binary format.

It's also very fast. In fact, one of our customers has compared the speed of the BBC micro with Hewlett-Packard's powerful HP64000 development system. He assembled identical software on both machines and was surprised to find the BBC micro running with our 6801XR cross-assembler to be the fastest of the two.

Our software is available for assembling machine code programs for the BBC micro itself (for which our 65C02XR rom is ideally suited) or for any of the other target processors listed below. It is compatible with the models B, B+ and Master 128 and with all DFS, ADFS and Econet filing systems. (Owners of early model B's should ensure that their computer is equipped with Basic 2).

Order Code	Target Processors	Price
6801XR	6800,6801,6802,6301...6301X	£48.00
6805XR	6805,146805,6305	£48.00
6809XR	6809 family	£48.00
8085XR	8085,8080A	£48.00
Z80XR	Z80, HD64180	£48.00
68000XR	68000,68008	£56.00
65C02XR	65C02, 65SC02, 6502	£38.00

HARDWARE

JOY FOR ELECTRON USERS

Mike Jackson reviews a new joystick interface and ROM board

Sidewinder is a semi-transparent box, 16cm by 9cm, providing Electron users with a unique combination of three facilities: it is an interface for a nine-pin switched joystick; it holds software in ROM which allows you to convert games to respond to the joystick; and finally (and quite differently), it is a ROM board with three spare sockets for your own firmware.

The unit fits directly on to the edge connector on the Electron. If you have a Plus 1 or 3, it must be detached and reconnected on to the far edge of the unit, which is claimed to be a full through bus connection. In this way, the Sidewinder will bridge the computer and the Plus interfaces. I could not test it with the Plus 3, but with the Plus 1 attached the system not only seemed ungainly, but was also insecure: it could quite easily be separated by a knock, even while powered-up. Otherwise, the Plus 1 seemed to work normally. I fitted a Spectravideo Quickshot II joystick to the Sidewinder and it seemed to work well.

The instructions for setting up are easy to follow. Simply type *JS ON and then reply to the short sequence of prompts – these tell the unit which keys are being used by your game for direction and fire. You are then told to load your game. Although in ROM, the software uses some RAM and a very long game may fail to run, with the equivalent of an 'out of room' message: *Repton 2* bit the dust here (I know, who needs joysticks for *Repton 2*?).

Wizard claim 99 per cent compatibility with Electron software. They claim to have tested the Sidewinder on software from a number of the leading software houses – I, though, only have a very limited selection. Well, the good news is that *Strike Force Harrier* is finally brought to heel. At last I could use my Quickshot II to fly with unequalled ecstasy into the side of every mountain on the map. It made it a different game and *Harrier* freaks may find it the answer to their dreams.

But will it liberate Electron *Elite* players from the keyboard, and enable them to blast their way beyond 'Rubbish' status? The answer, sadly, is no: the game loads and runs and you can still use the keys as normal, but it does not respond to the joystick.

Wizard believe that this may be due to lack of memory but are hoping to get their programmer working on an answer. So you're

stuck with the old problem of not always knowing if the unit will work with your favourite games. If you want it to work with any particular software you should check first.

You can see the three spare ROM sockets (next to the *Joy* ROM) through the plastic cover. The cover is easy to remove and you can insert programmed ROMs of size 2764 into any of the spare sockets and also apparently into the *Joy* ROM's own slot. I used Beebugsoft's *Toolkit* ROM and it seemed to work without any trouble. Although not claimed in their advertisements, Wizard have told me that a small adjustment to the Sidewinder will allow it to be used for sideways RAM: anyone interested should contact Wizard for confirmation and details.

With the Plus 1 attached I was able to alternate between the *View* cartridge and the

Toolkit and *Joy* ROM: one of the advantages of a ROM board is that you can easily switch between ROMs. For example, it was very useful to have these last two ROMs 'on call' at the same time when I was writing a joystick routine for the Sidewinder.

Those interested mainly in using ROMs will judge Sidewinder according to the system they want and can afford. I would think that this unit's main strength will depend on its ability to convert current popular software to work with a switched joystick. Nevertheless, this is an interesting combination and may make a useful addition to the choices available for expansion. Now, where are those mountains . . . ?

Sidewinder, £39.95

Wizard Peripherals, 29 Glenalmond Road, Banner Cross, Sheffield S11 7GW. Tel: (0742) 683435.

If you purchased a Master 128 or ET between January-May 1986 please read on.

This is an important message for users of BBC Master Series micros purchased between January and May 1986. You should read this announcement carefully then contact your Acorn dealer if you have not already done so.

It has been found that when the battery in the above models is close to exhaustion, the microcomputer may attempt to recharge it. This is contrary to the recommendations of the battery manufacturer.

An upgrade kit which prevents this happening has been developed and is now available from any Acorn dealer at no cost. Fitting can be carried out easily either by you or free of charge by your supplier. This will not invalidate your guarantee.

If you have difficulty in obtaining a kit, please call 0223-214411 and ask for Department A2.

In the meantime, we suggest you follow standard electrical appliance guidelines and keep the power switched off when your microcomputer is not in use.

We apologise for any inconvenience that this upgrade will cause but we hope that Acorn's customers will be assured by our desire to maintain a high standard of product in the field.

Acorn 
The choice of experience.

REVIEWS

SOFTWARE

PRIVATE INVESTIGATOR

Powerful software to edit discs in depth, reviewed by Geoff Bains

Advanced Computer Products has produced some remarkable software recently and the latest is the *Advanced Disc Investigator* (ADI). This ROM-based package costs £28.75 and is worth every penny to the serious disc user.

The ADI is a language ROM providing a very flexible disc editor. It can deal happily with a standard BBC micro with an 8271 disc controller chip, and a B+, Master or Electron with Plus 3 with a 1770 chip.

The ROM is called with *ADI which displays the *Advanced Disc Investigator* command screen. Displaying a rare sense of humour, ACP has designed this screen to look like a disc inside its sleeve. On the 'label' of the disc is the command menu, on the 'sleeve' a window shows the status of the package and the bulk of the screen displays the output.

The ADI offers you 17 commands to manipulate your discs. The commands are selectable either by moving the cursor along the single letter mnemonics displayed and selecting the required letter with the Return key, or by typing in the initial letter of the command itself. The choice of methods provides a very easy way to enter commands that will satisfy any tastes.

Status display

The status window not only displays the current status of the program but also allows you to change it. Various parameters are displayed, including the drive number, the number of tracks, and density of the source and destination drives, the first track and number of tracks to be operated on by the command selected, and the first sector and number of sectors to be used by the command. Other current parameters include: track information such as length in bytes and track, head, sector, and length IDs, the current operation being carried out by the floppy disc controller chip, and the result of the last operation.

These parameters can be altered using the cursor keys in conjunction with the Shift key. The parameter to alter is selected with the horizontal cursor keys and Shift, and its value increased or decreased with the vertical cursor keys and Shift.

For some unknown reason ACP has elected to use the up key to decrease a value and the down key to increase it! Crazy, but at least

ADI displays several useful parameters

values can be entered directly from the keyboard as well.

The first and most useful command will Copy the contents of one disc onto another. This is not a normal backup command but a complete disc copier that will copy strangely formatted tracks across as they are recorded, and generally work its way past most protection. It is a simple matter to alter the relevant drive sections of the status window to, say, copy a protected 40 track disc onto another for use in 80 track drives.

The ADI's Verify command does not check a disc for valid data as DFS verify commands do. Instead, it checks the contents of one disc against another to see that all has gone well during the copy operation.

The third command is to Edit a disc sector, and is very similar in operation to most disc sector editors. The sector is displayed with both hex dump and ASCII field. However, as the *Advanced Disc Investigator* can deal with all discs created using the 8271 and 1770 controller chips, it must cope with sectors which are considerably longer than the Beeb's standard 256 bytes of data, so the sector is displayed in two pages if necessary. The cursor can be freely moved around the sector and changes made in both hex and ASCII as it goes. A very nice feature is the ability to display the sector as disassembled 6502 codes.

If the detailed workings of strangely formatted discs concerns you then the Scan command will be useful. This reports on the track, head, sector, and length ID codes from each sector of the disc and the sector's length in bytes.

The *Advanced Disc Investigator* is also capable of formatting a disc to any strange format

which it can read. The Format command will format any number of tracks to any specification the controller chip can handle according to the information in the status window.

The skew and field gap sizes can also be changed with the Modify command. These affect the most basic workings of the controller chip and being able to control the formatting in this way means that just about any format of disc can be created. If you have a 1770 controller chip you can easily use the ADI to, say, create discs readable by an IBM PC.

Even more amazing is the Unformat command. Although this will not literally restore sections of a disc to their new condition, it formats them in such a way that the disc controller cannot recognise them as formatted.

ROM routines

Several of the rest of the commands available in the *Advanced Disc Investigator* are really routines used by the ROM itself. These allow you to read in sectors from the source disc to a RAM buffer, edit them in a similar way to the disc sector editor, and write them out again to the destination disc.

The final *Advanced Disc Investigator* commands turn the printer on and off for a permanent record of the disc contents, restore the status parameters to their default values, and allow *commands and OSWORD 7F calls for the floppy disc controller chip to be issued.

The *Advanced Disc Investigator* is without a doubt a powerful piece of silicon. Its operations comprehensively cover just about anything you might want to do with a floppy disc – backing-up, repairing corrupted tracks, creating protected discs, not to mention just editing a wider range of discs than other editors can manage. The manual introduces each command in a clear and concise manner and gives a brief description of all the various ID codes and parameters that go to make up a disc sector. However, very little is actually said about how to use these either to overcome or to instigate protection on a disc. This is a shame as it can only put off newcomers to this field trying this otherwise excellent product.

Advanced Disc Investigator, £28.75 (ROM)

Advanced Computer Products, 6 AVA House, High Street, Chobham, Surrey GU24 8LZ. Tel: (0276) 76545.

NEW BBC PRODUCTS FROM CLARES

Enhanced BETA-BASE £25

SPECIFICATION

- 1) Random Access - disc based, single or dual drives
- 2) File Size - max 65,000 records
- 3) Record Size - up to 2048 characters and 200 fields
- 4) Field Size - up to 254 characters
- 5) Holds - approx 1200 ADDRESS records per 100k
- 6) Search - 5 search fields using powerful options
- 7) Sort - 500 records on 3 fields in 60 seconds.

SYSTEM FEATURES

- *CALCULATE - using any valid expression
- *PRINTOUT - Powerful options
- *REDEFINE - Titles, fields etc.
- *TRANSFER - From one file to another
- *GLOBAL ENTRY - of repetitive data
- *SEARCH LISTS - Allow creation of sub Databases within main Database
- *SPOOLER - enables you to create spooled files that are compatible with Wordwise, View etc.
- *INPUT - is a routine included on the disc which will allow you to write your own utilities for accessing your data. Many of the programs on the utilities disc were written using this procedure

BETA-BASE UTILITIES £12.00

Extend the power of Beta-Base with the extra facilities provided on this disc.

- *MAIL MERGE
- *LABEL PRINTER
- *DISC SORT
- *EXTENDED SEARCH
- *FREE FORMAT TRANSFER
- *FAST PACK
- *STATUS

The MAIL MERGE alone is worth £12 so you get a real bargain with this disc. The features are so numerous that we cannot mention them all here.

Ask for our UTILITIES DATA SHEET if you want more information.

FONTWISE PLUS £20.00

Due to the phenomenal success of FONTWISE we just had to make FONTWISE PLUS compatible with VIEW as well as WORDWISE and WORDWISE+, at your insistence!

Now you can have PROPORTIONAL and JUSTIFIED text in 12 different fonts, all within the same document if required. In addition to the standard facilities like line and page length, pagination, left margin etc. we have now added

- Enlarged, standard & condensed fonts
- Tabs
- Temporary indent
- User definable line feed
- User definable character spacing
- Non proportional fonts
- Now with 12 fonts
- Plus many more features

If you are not convinced ask us to send you a sample printout and you will be amazed at the quality - requires an EPSON compatible printer capable of single, double and quad density graphics but you do not require any RAM in your printer to use FONTWISE PLUS.

MACROM £40 £35 DISC

MACROM is a fast full featured MACRO ASSEMBLER ROM that allows the use of macros, which are loaded from a macro library stored on disc. Assembly can be from disc to memory, disc to disc, memory to memory or memory to disc, thus allowing the use of very long source code up to the length of your disc. MACROM source code is tokenized and thus takes up far less room in memory or on disc than most assemblers.

- Operate in any mode
- Tokenized source code
- Assembles 6502 & 65C02 codes
- Automatically loads macros from library on disc
- Automatically loads subroutines from disc
- Macro library supplied plus demo files
- Chain program sections into main code
- Many different assembly options
- Converts BBC assembler code into MACROM source code ● Very fast & very flexible

In a comparison with ADE, MACROM was able to assemble a program to disc in 1 min 24 secs compared to 5 minutes with ADE and the source code took up 30% less room on the disc.

Ask for a data sheet today

BROM PLUS £34.50 £30 DISC

BROM was yet another of our runaway successes and such has been the demand for extra features that we have now produced BROM PLUS. Most of the original BROM favourites are there plus a whole host of additional commands to aid you, the user.

Commands include:

- EDIT - a FULL SCREEN EDITOR, not to be confused with the line editor used in other toolkit ROMs
- ERROR ON traps errors and enters the EDITOR
- FIND all occurrence of a string or keyword and enter the editor, TAB will find the next one and so on
- SCHANGE a search and replace facility
- LCOPY & LMOVE allow you to copy and move lines
- PACK is a very powerful routine which removes REMS & spaces and forms multi statement lines in a very intelligent way
- RENUM is a partial renumber facility
- XREF allows you to cross reference your program
- COMPARE a file against memory
- DEDIT a robust disc sector editor
- DFIND to search a disc for a string
- DGET/DPUT to load or save sectors
- FORM allows you to format up to 4 disc sides
- MENU to load programs from a disc with a BROM menu
- XCOPY to selectively copy files from disc to disc
- XDEL to selectively delete files from a disc
- MEDIT to view and edit memory - FAST
- ROMLIST lists all ROMs and their current status
- ROMON & ROMOFF which enable you to turn on/off sideways ROMs even after CTRL/BREAK.

"This is the best BASIC screen editor I have so far used."

HARDWARE

ACORN'S SUPERCOMPUTER

Peter Voke witnesses the 32016 Second Processor in action

The BBC microcomputer is almost unique in its design as a stand-alone personal or education computer that can also act as a 'front-end' for a different and possibly much more powerful second processor. The concept proved fruitful for Acorn when it brought out the Master series: by putting the 'back-end' processors inside the case, the hybrid BBC micros can serve a variety of markets, with Turbo, Master 512 and SC versions catering for the home enthusiast, small business user and higher education markets respectively.

The Master SC is not out yet, but its precursors, the 32016 Second Processor and the Acorn Cambridge Workstation, have been around for some time. Little is heard of the 32016 processor partly because of the very specialised market it is aimed at; it is designed primarily for use in colleges and universities, and Acorn have only sold a few hundred machines so far. As I hope to explain, the 32016 is a very different proposition from the more familiar 6502 and Z80 second processors.

For one thing, it costs more: 32016s are available with one megabyte (mb) of RAM, costing typically £1400. (The Master SC was originally said to have half a megabyte, though most of the software available needs 1mb.) The Cambridge Workstation is basically a complete 1mb system with separate keyboard and screen included, costing £3480 plus VAT; there is a 4mb version of the Workstation, too. It is immediately apparent that the 32016-based systems are not ordinary 'home' machines. To find out more, there is no better place to go than Queen Mary College in the East End of London, which has no less than 80 of the 300 machines Acorn have sold.

The 32016s at Queen Mary College (QMC) are being used in two quite distinct ways. Sixty-four of the 80 machines are linked up in Econet networks; each network consists of up to 12 processors (each plugged into its own BBC, of course) together with its Winchester hard disc fileservers. The other machines, however, are being used as personal supercomputers by individual members of staff who have number-crunching research projects under way.

The individual academics who have 32016s are all fairly pleased with them. Most are using the 32016 Fortran-77 compiler, which can

Little is heard of the 32016 processor partly because of the very specialised market it is aimed at; it is designed primarily for colleges and universities

handle Fortran programs ported straight on to the 32016 from the London University network. I spoke to Dr Andrew Tworkowski, who was running programs originally developed for the university's Cray-1, one of the fastest supercomputers in the world. Andrew was using the 32016 to pursue his research on chaotic dynamical systems, and getting the same answer using double precision Fortran on the 32016 as he had got from the 64-bit Cray machine. For his programs, running time on the 32016 was about 140 times longer than on the Cray, so programs that had taken half an hour on the supercomputer took three days on the 32016. But since the Cray had to be shared with many other users, a job like that would frequently take up to a week to be run on the supercomputer. Andrew now gets his results faster, using a machine that is more than a thousand times cheaper.

Individual supercomputers like Andrew Tworkowski's 32016 are an immensely attractive proposition, and anyone who wants a desk-top Fortran engine and doesn't need more than 1mb total memory should consider one. You may not always get one-140th of the speed of a Cray-1, but my tests suggest you will never get worse than a 700th, which is still

impressive. Andrew's 32016 co-processor and BBC micro have never broken down, and are run from double 80-track floppy drives. Other academics are using them for statistical analysis in biology, or doing long Fourier transforms on data taken directly from instruments.

Of course Fortran is not the only possibility: 32016 Assembler, Pascal, Lisp, Basic and BCPL are all available, plus several packages run within or using these languages, such as the *Gino-F* (for Fortran graphics), *GCAL* (a text processor written in BCPL) and the algebraic manipulation package *Reduce* (in Cambridge Lisp). The languages are all standard (Fortran has the WHILE statement as an optional extension), and generally appear top-notch. If you are keen on Lisp, make sure it is the dialect you want. If BCPL is what you are after, try it first; it is probably the weakest of the languages on the 32016. Prolog is promised, along with more applications packages.

The main complaints are that too many important features had been 'promised' by Acorn for far too long. Sounds familiar enough. Crucially, the 32016 still does not have a good straightforward wordprocessor - you have to use *GCAL*, or make do with *View* on the BBC micro. The popular scientific wordprocessor *Vuwriter* is promised, but the current version is unusably slow according to Acorn. Vuman, the authors of *Vuwriter*, are trying to speed it up.

A rather less rosy story comes from those who are using the networked 32016 processors. David Pick, who as head of Small Systems in the computer unit at QMC has his own 32016 in his office but is also in charge of the software for the networked machines, sums up his mixed experiences by saying: 'When they are good they are very, very good, but when they are bad . . .'

Quite simply, in the months since the 32016 networks were set up, single machines have crashed far too frequently. When use of a network has been high, it is possible for the whole network to crash so that it has to be rebooted from scratch. Of course this can happen on any Econet; but the large files that a network serving 32016s has to transfer seem to make the problem more frequent. Lecturers who are trying to teach Fortran, Pascal or Lisp to groups of first or second year students were

WHY PAY HIGH 'FIXED' PRICES

(We do not charge you for our fancy premises by charging high 'fixed' prices!)
 Reputations take time to build, we have been repairing ZX81's, Spectrums, QL's, Apples and BBC's professionally, for 2 1/2 years - who is coming second?

in all U.K. with While-u-Wait repairs! with INTERNATIONAL repair service!

FOR PROFESSIONALISM - "Of all the repair companies 'Sinclair User' spoke to, MANCOMP seemed the MOST PROFESSIONAL when it came to advice and a helpful attitude" AUG 85.

FOR HONESTY - We let you watch your computer being repaired and if there is nothing wrong with it, we will tell you!!!

FOR REPUTATION & HELPFULNESS - "I have come across a firm that will be more than willing to advise you as to how to remedy your problems. They are called MANCOMP and as well as repairing faulty computers, are also quite willing to discuss your problems with you and offer reasonably cheap and more importantly CORRECT CURES" Phil Rogers POPULAR COMPUTING WEEKLY JAN 85.

Every parcel sent by Royal Mail Receipted Post and insured for return journey!
 (For next day delivery include £1.50 extra).
 (Securcor by prior arrangement).
 On-site maintenance for Apples, I.B.M.'s and most makes of printers also available.
Guaranteed 4hr response!

WHY DELAY - OUR ESTIMATES ARE FREE AND WITHOUT OBLIGATION. IF YOU DO NOT LIKE OUR ESTIMATE WE WILL RETURN THE COMPUTER AND REFUND THE POSTAGE INCURRED!

EXTRA-SPECIAL DISCOUNTS FOR EDUC INST., H.M. FORCES, CHARITIES, HOSPITALS, ETC!
 Hardware and software design problems? Contact us for the complete service, from design through to manufacture.

DDX IMAGINA
 BRITISH BROADCASTING CORPORATION
 MASTER SERIES MICROCOMPUTER

IMAGINA, our new document illustrator, and DDX, our powerful and popular 2-D CAD system are both now available in specially-developed versions for the Master Series computers. These latest versions take full advantage of the improved memory management, graphics and extra speed of the Master Series to make them even more effective aids to illustration, graphics, design and drafting.

IMAGINA is a system for creating illustrated documents. It can be used with View or other word-processors which allow you to use the two new commands #image and #imagine to print text and graphics together and to integrate graphics into document files. Graphics can be created using the IMAGINA artwork editor or taken from other software. IMAGINA is a document-based system - not simply a page make-up program - all your normal word-processor editing facilities and printer typefaces are retained and no limit is placed on the number of pages or images in a document.

The IMAGINA artwork editor features user-friendly icons and pull-down menus controlled by mouse, trackball, Graffiti or cursor keys - no commands to remember and minimal keyboard use. There is a choice of line styles, brushes, and large text fonts, and you can choose from a selection of standard fill patterns, typefaces and symbols, or design your own using the utility programs provided. Drawing facilities include rectangles, polygons, circles, arcs, ellipses, painting, pattern-fill, clipboard, copy, move, erase, rubber-banding, snap-on grid, on-line help... Images up to 8 x 9 in may be printed on most dot-matrix printers. IMAGINA is available for the BBC model B+128 with the Acornsoft GXR ROM or for the Master Series and costs just £50.

DDX is a versatile drafting system, widely used in professional design offices and in higher education. The unusually sophisticated input routine accepts a very wide range of coordinate formats and the screen cursor may be controlled directly by the cursor keys and a mouse, trackball, Graffiti, joystick or digitiser. An impressive list of single-key mnemonic keycodes ranges from several line types through circles, arcs, ellipses, etc. to facilities found on up-market CAD systems - dimensioning, area measurement, macros... Outputs to most dot-matrix printers plus optional drivers for most plotters. DDX for the BBC model B (and B+) costs £125 and for the Master Series £150.

Our growing range of personal design software for the BBC micro also includes Digital Drawings, a simple 2-D CAD program - now only £50! 3-D View, a wireframe modeller/perspective generator, at £35 (plus optional plotter drivers from £15!) and ICE, a thermal insulation/condensation evaluator at £35. Please add £2 carriage plus 13% VAT and enclose a cheque with your order or ask for more details from:

REVIEWS

HARDWARE

Deborah Pollard of QMC had some grim experiences with the early versions of the Panos operating system

keen on the 32016s at first; but their enthusiasm soon cooled as their students started to give up in disgust, put off by the regular unreliability of the networks.

In defence of the 32016 (and Acorn), it should be said that QMC is what the Americans would call a 'beta test site'; in other words a field trial site for many of the systems (hardware and software) that make up the 32016 package. In particular, QMC has been deliberately pushing the Econet networks as far as they will go – and probably a good bit further. It may well be that QMC has seen every problem that can crop up on the 32016, and that they are now nearly ironed out.

Deborah Pollard, who runs the Computer Aided Design and Education Centre at QMC, has had some of the worst experiences with her relatively small network in the Centre. Machines typically crashed three or four times a session with the older versions of the operating system, Panos. Deborah emphasises that things

have improved markedly since the field trial version 1.3 of Panos was installed recently, and is expecting that things will run a lot more smoothly next academic year. Loading files and linking compiled code for running are both much faster under Panos 1.3, though someone used to other well-known operating systems will still find such actions as loading or deleting files rather slow.

A number of good computer aided teaching programs had been brought across from the College's ICL mainframe (a straightforward process) and ran without too much alteration. Standard Fortran-77 will usually run first time on the 32016. Programmers used to a mainframe find the 32016 a bit short on facilities such as Fortran debugging diagnostics, the ability to link in libraries from one language to another, a Basic compiler or the means to dump a screen to disc or printer. The 32016 is still limited to some extent by the BBC micro, and is less than ideal for Computer Aided

Design; there is no mouse or trackerball software, and the screen resolution is too low. Deborah also commented on the lack of a decent wordprocessor or spreadsheet for the 32016 (*Matrix 3* is 'promised', like *Vunwriter*).

In spite of these complaints, what I saw in the Centre seemed impressive. Most of the work is done in Fortran, and the facilities for creating, compiling and running code seem attractive and easy to use. Regrettably there are still a few bugs in the screen editor (which is otherwise excellent) though most have been eliminated in Panos 1.3.

The Pascal and Lisp have been used by lecturers teaching in the Computer Science Department, but the networks have caused just as many problems in these contexts. A course on algebraic manipulation using the Lisp program *Reduce* could only take place at all because of the facilities provided by the 32016. Unfortunately, the large amount of code required students to interact frequently with the Win-

REVIEWS

HARDWARE

chester over the network – and the crashes have been correspondingly more severe.

The 32016 is now reaching the point where it may well get – and deserve – more attention. The richer secondary schools or sixth-form colleges might consider a few in a network, if the demand is there for Fortran, Pascal, Lisp and/or C. If you are thinking along these lines, then bear in mind that the software does cost extra, and don't expect to save cash by cutting corners. Even a small network needs a Winchester hard disc, and should be installed on the basis of a one or two month acceptance test. Insist on the latest version of Panos, and if the network doesn't stand up under the most gruelling use your students or sixth-formers can subject it to, throw it back at Acorn and ask for your money back.

This hard-nosed approach is probably the only way to deal with a system that can vary from wonderful to worse than useless: from giving each of your students the power of a small VAX supermini to the sort of unreliability that puts people off programming for life. If

In defence of the 32016 (and Acorn) it should be said that QMC is a field trial site for many of the systems that make up the 32016 package

you are an individual researcher or freelance software developer, the 32016 is well worth considering. The totally standard Fortran and Pascal mean that programs developed on the 32016 will run on any mainframe. If you wish to get results, remember that a personal 32016 can give you hardcopy output about as fast as a supercomputer shared with a few hundred other users, for less than the cost of a motorbike. If applications packages are what you are after, the 32016 is still rather weak compared, say, with the IBM. With the small installed base, it is hardly surprising that software is a bit thin on the ground. Acorn need to turn the vicious circle of software famine and unreliability leading to low sales into a virtuous circle of new software coming on line to supply a growing community of a few thousand enthusiastic and contented 32016 users. Maybe the Master SC will be the magic wand to perform that trick.

32016 second processor, £1295, Acorn Computers, Cambridge Technopark, 645 Newmarket Road, Cambridge CB5 8PD. Tel: (0223) 214411

We're standing printer

PowerType DAISYWHEEL PRINTER £229

With over 100 type fonts on widely available daisywheels and using standard ribbon cassettes, PowerType is remarkably cost efficient. A wide carriage giving up to 165 columns of beautiful print in the typeface of your choice, even a graphics capability, the flexibility of reverse paper feed and 18 characters per second means swift, classic correspondence. PowerType comes with Parallel and Serial interfaces as standard.

A&B Computing said in July that Powertype was a quality printer with a host of standard features, excellent value at £400 – How would they rate it now?!

STX-80 THERMAL PRINTER £79

This quiet and efficient machine prints at 60 characters per second and the compact thermal printhead, designed for dependable performance, will give you a lifetime service of 20 million characters.

BOOKS

LOGICAL LANGUAGE

PROGRAMMING
IN micro-PROLOG
MADE SIMPLE

'Programming in Micro-PROLOG Made Simple', P H Hepburn, Ellis Horwood, £8.50

Micro-PROLOG is the language of artificial intelligence, adopted by the Japanese Fifth Generation project and taking over from Lisp in many applications. It's becoming popular in education because the basis of the language is logic rather than maths.

But for people brought up on Basic, languages like this can be hard to grasp. The manual which accompanies the Acornsoft micro-PROLOG software, for example, is practically unreadable for newcomers. That's what this book tries to put right. Most of it is based around five specific applications which serve as examples for the various principles and tech-

niques that are used in Prolog programming.

The book is not machine-specific. Micro-PROLOG version 3.1 (including the Acornsoft product) is almost identical across different machines, and so the programs in this book will run without problem on a Beeb. By the same token, however, the book doesn't properly cover the few machine dedicated primitives, such as file handling and graphics, so you will still need the standard manual.

Throughout the book the syntax used is for the SIMPLE supervisor which is loaded in over Micro-PROLOG. It has the advantage of being friendlier than the core language, but is a little less powerful. There are a few examples of core syntax, but they're not fully explained and someone wanting to tackle that subject would do better buying de Saram's *Programming in Micro-PROLOG*.

This book makes an excellent basis for classroom sessions, and also a good starting point for anyone wanting to make the move from Basic into this fascinating language.

Steve Mansfield

GOOD THEORY, BAD PRACTICE

'Interfacing Your BBC Microcomputer', Roger Morgan/Winston McClean/Joan Rosell, Prentice Hall, £8.95

Yet another BBC Micro hardware projects book, this time with a bias towards laboratory experiments. I suppose this book was aimed at students on technical courses, but this is just my guess, as reading it through left me still uncertain. The level of the material varies almost page by page, from the use of integral calculus to advice on how to wire up a relay. In general the levels of theory and practice are ill matched: the practical side often falls short of adequate support for good theoretical work.

There are good notes on the use of the Tube (quite unusual, this), and the programming examples are clear and well written.

A good book to pick and choose from, but not recommended for the hardware beginner.

Mike Barwise

prices on their heads.

The STX-80 has a carriage width of 80 columns, graphics and many of the features of much larger printers. It's so quiet, the only thing that will make you shout is the price!

GIVE YOUR BBC THE PC LOOK

WITH THE **Viglen** PROFESSIONAL CONSOLE UNIT (P.C.U.)

ONLY £49
(INCLUDING VAT)
PRICE INCLUDES
COILED CABLE

Give your BBC Micro System the professional PC-look by replacing your existing lid with this smartly styled package. House your computer, monitor, disk drives & ROM cartridge system neatly in this strongly constructed, high impact ABS unit, colour matched to the BBC micro, and give yourself an outfit to impress all who see it.

This unit will support monitors including 14" television sets.

Capable of accepting most internal expansion boards such as Solidisk, ATPL Sidewise, Midwich 16, RAMAMP 16+32k Exprom, Computer Village CVX16, HCR Sideways, 6502 2nd processor boards. Fully ventilated. Full fitting instructions.

DEALER ENQUIRIES WELCOME.

Package includes:

- Keyboard case
- Screened main unit casing including internal fittings
- 2.0 metre coiled cable to connect main unit to keyboard
- Blanking plates included to blank out disk drive aperture
- Keyboard label

ACCESSORIES (prices inc. VAT)

1. 2.0 metre coiled cable on its own £15
2. Dual-drive data cable £9
3. Dual-drive power cables £5
4. Special internal switch mode power supply kit capable of running two half-height drives cool running £29
5. Fan kit, only necessary in extreme cases £35
6. Fitting available from £15
7. Extension keyboard on its own £29
8. Also available with single or dual drives ready fitted *Price on Application*

How to order:

By post— Simply fill in the coupon. Enclose your Cheque, P.O. or use your Access, Barclaycard. Please make cheques payable to VIGLEN COMPUTER SUPPLIES and post to the address stated.

Or telephone: 01-843 9903
Credit card holders (Access, Barclaycard only) can purchase by telephone. Please give Card No. name, address and items required.
Viglen are also major suppliers to educational and government establishments and welcome further enquiries and orders.

TRUE TO TYPE?

Bill Penfold gets his hands on a novel keyboard

In theory typewriter keyboards should be laid out entirely differently. In theory, the whole board should be a different shape – and that's the idea behind the Maltron ergonomic keyboard. Unfortunately it's probably not a viable theory. But before we start knocking the idea it is only fair first to consider what the conventional keyboard is like – and why.

Look at your own Beeb. Apart from the row of red function keys at the top, what you have is an ordinary, everyday English-language qwerty keyboard. (It is called Qwerty because those are the letters at the start of the first row beneath the numbers.)

When this layout was devised typewriters were of the old sit-up-and-beg variety. You bashed a key attached by a wire to a letter arm which then hammered an impression through an ink ribbon.

It wasn't difficult to get letter arms jammed together by rapid striking of two keys consecutively and, to prevent that, the designers decided the best thing to do was to slow down the typist a bit through the layout of the keys. And that is how we got the qwerty layout.

Bill's beef

I've had a long-running bellyache about the standard Beeb keyboard. This is because for touch-typists the BBC micro, despite its many virtues, is a bit too flat and cumbersome, a complaint which may come as a surprise to the majority of home computer users considering the standard of most other micros' keyboards. But for those used to hammering away at an old-fashioned, coal-fired typewriter, the BBC micro keys are a bit close and cramped: it is almost impossible to build up any real speed.

The first thing I did after being handed the Maltron package by a gloating editor was to try to buy a copy of Adam Faith's *What do you want?* The reason will be explained shortly.

Anyway, Maltron's kit for the BBC micro is quite an impressive package . . . at least in theory. First you have to replace your Beeb keyboard with a specially converted one to which the Maltron board can then be attached.

At first sight the Acorn board supplied with the package looks no different from the one already on your micro apart from the peculiar flexible connector trailing from beneath it. Turn it over, though, and you will see the

The unconventional layout of the Maltron

conversion work which is probably most kindly described as 'robust'. The only problem with mine was that the down cursor key did not work, which meant having to use the Return key to travel down the screen.

The Maltron board itself is fitted on to a black keyboard case similar in size to the Viglen remote console. Like your own Beeb it has a top row of 10 red function keys. But that is where any similarity ends.

The Break key is to the left of the function keys. The keys themselves are in four groups: two large groups of 27 on the right and 26 on the left. These cover all the characters apart from the 'E' and the full stop which are part of a small group of six keys on the left. The other four keys on the small left-hand group are Delete and CTRL plus two of the cursors. The right-hand small group also has Delete and CTRL keys plus the other two cursors. It also has a small single key for spacing instead of a space bar and a small key for Return. The idea is that the typist's hands can flick from key to key more quickly and with less stretching than on a conventional board.

With the package comes an introductory booklet promising 'greater results with less strain' and 'a new level of keyboard comfort and accuracy'. Also according to the booklet the 'new ergonomic shape minimises likelihood of physical harm to operators which can be caused by the old design.' Physical harm! I know people are worried about VDUs but will keyboards soon have to carry government health warnings as well? So it would seem. The alleged risks of typing on your common-organ keyboard are revealed at the back of the introduction with the reproduction of an article from a New Zealand magazine describing the health hazards of Repetition Strain Injury

(RSI) suffered by a typist using a word-processor. Pretty grisly reading – and I've put in for my danger money over this review.

The package also comes with a set of four cassette tapes. But don't try to load them on to your computer – they are instructions, not software. Finally there was a training manual of exercises – exercises which took me back about a quarter of a century and on to the search for Adam Faith's Sixties' hit.

Learning again

Trainee typists, while learning where each key is, bash away for hours at groups of letters designed to implant the keys' location to memory to the point that the typists' fingers go there automatically without thinking or looking. So too with the Maltron keyboard. It was a nostalgic reminder of days learning to touch-type, a would-be journalist among a classroom of would-be secretaries. Anyway, our instructress was a greater believer in the Rhythm Method for teaching you to type. We learned to tap away in time to Mr Faith. What do you want if you don't want money . . . Tap . . . tap . . . tap . . . tap . . . What do you want if you don't want gold . . . tap . . . tap . . . tap . . .

Inexplicably there wasn't a copy to be had anywhere in the High Street, just a blank look from the girl behind the record counter – 'Adam who?' To which I could only reply: 'Oh ye of little Faith!'

Still, despite this lack of essential training material, I finally completed my field trial, and my conclusion is that it's a nice idea – but one whose time has not come. And I doubt if it will. Risking the possibility that in another quarter of a century young trainee typists on their Maltron board will be shown these words to mock, I simply don't believe it will replace the qwerty board. It may be better. It may well be faster. But qwerty is too well established to be dislodged. Typists will continue to be trained on qwerty boards because that is what offices use – and offices will continue to buy qwerty boards because that's what millions of typists are trained to use.

Well, that's my theory . . . only time will show what happens in practice.

Maltron Keyboard £175.

PCD Maltron, 15 Orchard Lane, East Molesey, Surrey KT8 0BN. Tel: 01-398 3265

COULD YOU USE 16 COLOURS IN MODE 2?

- ★ Choose from a palette of 4096 selectable colours
- ★ Colours range from sharp contrasts to subtle shades
- ★ Hundreds of new colours available
- ★ The palette is simple to program using VDU 19 from either BBC Basic or Machine Code
- ★ Ideal for dramatic special effects in games, video presentations and many other applications
- ★ Easy fit board plugs inside the BBC Micro without soldering
- ★ Use in all modes

The Wild Vision Palettemate colour graphics card is a unique idea which greatly enhances capabilities of the BBC Micro. The actual displayed colours in any mode can be replaced with a selection from the palette of 4096, giving a staggering 16 separate colours in Mode 2. Moreover, the selection can be rapidly reprogrammed to give very dramatic effects. The system is very easy to install and connects to the linear inputs of an RGB Monitor via the standard connector at the rear of the BBC. A package of demonstration software and instructions is included.

Palettemate Graphics Card . . . **£149**
incl Carriage + VAT

Wild Vision also produce the Hawk V8 Image Processing System for the BBC Micro. Its highly innovative design enables the BBC Micro to grab and process single video frames in real time, though it costs far less than similar systems.

Hawk V8 Image Processing System from **£925.00**

Applications include:

- ★ Medical imaging
- ★ Video measuring
- ★ Industrial automation
- ★ Scientific image analysis, microscopics
- ★ Robotic control
- ★ Graphics and CAD
- ★ Optical character recognition
- ★ And many more

1/3 OFF ALL ROM's!

ADE is the complete program development package for assembly language programmers. Proven and revised over a period of 2½ years ADE has set the standard by which all others are judged. If you are writing 10 lines or 10,000 lines of source code ADE is for you. The powerful EDITOR, macro ASSEMBLER and DEBUGGER are amazing value at this price. ADE comes complete with a 160 page comprehensive reference manual and a utility/macro library disc. Please specify 40 or 80T.

ADE
£40

ASM
£23

ASM provides all the features of the ADE macro assembler. Use with other editors such as View and Wordwise. For enhanced debugging facilities use with the SPY2 ROM. Complete with reference manual and utility disc. Please specify 40 or 80T.

SPY2
£20

SPY2 is the most comprehensive of all debugging/disc utility ROMs. Apart from the full front panel debugging monitor SPY2 features single-step, multiple break-points, relocater, trace and 'versatile' disassembly facilities. The powerful set of disc recovery commands can be used for interrogating, editing and retrieving data stored on disc. Only available to 8271 dfs users. SPY2 also includes a disc formatter and a non-destructive single track reformatter.

HARDWARE / SOFTWARE

MASTER MEETS IBM – OR DOES IT?

Acorn's 512 co-processor claims to be reasonably IBM-compatible. But Bruce Smith finds that not all IBM software is happy on the Master

The Master 512 computer is the fourth of five Master series computers announced by Acorn in February this year. The 512 is in fact a co-processor board which plugs internally into any Master series machine. It comes bundled with GEM and the DOS Plus operating system, and professes to be reasonably IBM-compatible. Theoretically it should allow access to a phenomenal range of IBM-format software and, perhaps more importantly, allow users of this software to port it from one machine to another with no fuss.

The 512 board is very simple to install and Acorn must take credit for the overall design. Its small size belies the 512k of onboard RAM – don't get too excited though, as this is needed by the software. The co-processor is an 80186 chip which dominates the centre of the board. Once installed the system is brought to life by using a *CONFIGURE TUBE command. This hands control to the 80186 and the 4k Tube ROM then boots DOS Plus from a disc in drive 0.

DOS Plus

The Disc Operating System (DOS) Plus has been specially adapted for the Master by its authors, Digital Research. According to the manual it will 'support both IBM PC-DOS applications and CP/M applications', and is called compatible with CP/M-86, IBM PC-DOS 2.1 and MS-DOS 2.1. This effectively means that any program which conforms to these standards, ie, uses only the official system calls of either CP/M86 or DOS 2.1, will work on the Master 512.

For the uninitiated, a Disc Operating System is the basic level of operation of any computer of this kind. It supports a variety of commands which allow access to discs and include copying and deleting of files. The structure of the DOS is a hierarchical one and thus directories and sub-directories are supported. All files saved are timestamped using the Master's real time clock.

The most fundamental feature of any DOS is that it allows you to load application packages such as wordprocessors and databases which become your working environment. Meanwhile, the DOS stays at the

lowest machine level, carrying out your filekeeping needs. Table 2 lists the DOS Plus commands. Lovers of CP/M will notice many similarities, particularly with commands such as ED and PIP. DOS Plus supports a Z80 emulation mode which puts you in a standard

CP/M 2.2 environment with all the nominal commands available. Complete compatibility, though, cannot be guaranteed – many of the Acorn Z80 programs make use of the Z80 ROM, so these will not work. Similarly, specialist system programs such as STAT get confused. However the manual assures us that most CP/M 2.2 programs will run, though I did not have time to put this to the test. One final point here is that the Z80 emulator is one of several aspects of the bundled software that, to quote the manual, '... is unsupported by Acorn', a subject I will say more about later.

Being able to run and understand IBM software means that the Master keyboard must also be capable of generating IBM keyboard codes. The 512 keyboard driver is designed to return the same values as the IBM PC. Many of the keys on the numeric keypad are used for this purpose – for example, the 7 key is the equivalent of the IBM Home key (see table 1). However, with the software I ran, pressing the required key combinations didn't always work, so obviously there are still problems.

Loading applications in DOS Plus is not always as fast as it should be – this is because it may have to recognise the format of a disc. The

TYPE	types file to screen

Table 2. DOS Plus commands

main format used is the Acorn 800k format – a few seconds may be added to the loading time if, say, a 360k IBM OC format disc is used. This can be got round by copying the software to an Acorn format disc.

Other problems may also occur, for instance, when using IBM PC 360k discs where the format is 40 tracks. When data is subsequently written to the disc on 80 track drives the result may not always be capable of being

applications: *GEM Desktop*, *GEM Write*, *GEM Paint*.

Briefly, *GEM Desktop* is a filing and administration system; *GEM Write* is a wordprocessor; and *GEM Paint* is a graphics program. GEM is a popular WIMP system – Windows, Icons, Mouse and Pulldown menus. You enter the application simply by typing GEM from DOS Plus, ensuring that the correct discs are installed in the drives. read back into the IBM with the 40 track drives. This is because the read/write head mechanism on a 40 track drive is twice the width of the head in an 80 track drive and may have difficulties in reading the data.

Although the Master 512 is supplied with 512k of memory, DOS Plus takes a large bite into this – 154k to be exact. PC DOS 2.1 uses just 64k when running on an IBM PC, hence the usable space on a Master 512 is 90k less than the usable space on a 512k IBM PC. IBM PC packages that require either 256k or 348k memory space will run on the Master 512, but packages requiring more memory will probably encounter problems. Certainly those packages 640k in length will not run.

GEM

The Graphics Environment Manager (GEM) is supplied on two discs and contains three

first go into *GEM Desktop* from which you can perform housekeeping tasks or select the other two applications, which is done with the aid of a mouse. The mouse to be supplied with the release version will be a Far East import and have just two buttons. I have seen one of these mice at Acorn and can vouch for its good feel.

Much has been written about GEM in the popular computing press, so I don't intend to waffle on about it here other than to make a few observations for those of you who may not have come across it before.

GEM Write is an adequate wordprocessor, but it's not exactly easy or quick to use (my requirements for a wordprocessor). Mundane tasks such as inserting a line require the positioning of the cursor and the use of the mouse to pull down the correct menu to then select the item marked 'insert line'!

GEM Paint is a graphics package which on a

normal IBM machine will allow you to work in 16 colours. The limitation to two colours on the Master 512 is obviously a serious drawback, though reasonable results can still be obtained using the colours which appear as shades of grey.

Use of the Acorn colour driver (see below) can provide *GEM Paint* with four colours, but this produces worse results and the monotone mode is preferable.

Concurrent DOS

Although not supplied with the 512, Acorn will be offering the impressive Concurrent DOS for the Master 512. This is a version of DOS which allows up to four tasks to be running at the same time. For example, you could be using a wordprocessor such as *Wordstar* while another application was reading and writing to disc, at the same time as printing out a large document! The cost of

simply will not run because the protection mechanism tries to access the IBM PC disc controller chip. It is debatable whether publishers of such software will be willing to port the software for the 512: unless the 512 is a best seller the companies would undoubtedly wish to be commissioned by Acorn (at no small cost) to perform the task. Acorn is unlikely in the present climate to initiate such a commission, relying instead on third parties to act on their own initiative. It therefore looks as though the big three products (*Lotus 123*, *Symphony* and *dBase III*) will not see the light of day as far as the Master 512 is concerned.

Table 3 shows the software tested by Acorn and this is quite encouraging. Table 4 shows the IBM software I tested with the help of Simon Williams. This is software Simon regularly uses on his IBM clone – the results are less than encouraging as it proves that software is not directly transferrable. However, in many instances it might simply be a matter of reconfiguring the format of the software though we haven't yet put this to the test.

A typical example of the sort of problems which cropped up was when trying to use the excellent *NewWord* wordprocessor. This works fine, except when you want to use it with the spelling checker dictionary (this is resident and checks your spelling after each line, offering suggestions as you go). Here the message 'Files must be greater than 20' is generated. DOS Plus cannot have more than 20 files open and so this software will not run on a 512.

Conclusion

Table 5 details the requirements for IBM compatibility. If you are thinking of investing in a 512, I cannot stress too highly the importance of choosing your software first. Ask Acorn or your local dealer if the software will run – get your dealer to prove it and only then should you part with your cash.

It is difficult to advise you on whether the 512 is a good investment. Certainly at the original price of £499 I couldn't see that it was worth the money, but Acorn has now finalised the price and it is a far more acceptable £399. However, if you want to run all types of IBM software and to buy more as you progress, then ideally you should look for an IBM clone, which can be had for between £500-£800. This price compares very favourably with the £900 needed for a complete Master 512, and the IBM clone price will include monitor and drives.

If you only want to run GEM or concurrent DOS or any of the tested software, you already have a Master and don't want the clutter of a second machine then, and only then, should the 512 co-processor be considered.

Table 4. IBM software tested by Smith and Williams

DOS Plus is designed to be compatible with IBM DOS 2.1 (this also includes MS DOS 2.1) Compatibility is achieved at three levels which are: the user commands; the operating system calls; and the ROM BIOS(ROS) function calls.

A number of DOS 2.1 compatible utilities are provided which give the user a similar command interface to that found on DOS 2.1. DOS Plus is system call compatible with DOS 2.1 and all documented DOS 2.1 system calls are supported.

DOS Plus also provides emulation of the IBM ROM BIOS functions. These so-called ROS functions are essential to support application programs that have been written specifically for the IBM PC or PC/XT. The ROS entry points are used by some applications for low level control of various pieces of IBM hardware, examples being: the reading and writing of screen memory; changing screen modes (note that this refers to the modes as found on an IBM video controller card, not modes 0 to 7 of a Master 128); reading and writing sectors on a disc; and scanning the keyboard.

Table 5. The requirements for IBM compatibility

Miscellaneous

The fourth and final disc in the bundle contains a variety of utilities, which includes the colour display driver. For normal operations the 512 operates in a high resolution, two colour mode (black and white by default). A colour driver can be installed which will enable GEM to run in a four colour, lower resolution mode. Like the Z80 emulator, the colour driver is not supported by Acorn and so must be considered a waste of time. I must admit my extreme disappointment at reading such comments in the manual. If a company is supplying software, it *must* support it otherwise it's useless to the user – even if it is thrown in for free.

Concurrent DOS is likely to be high when compared with standard BBC micro software: Digital Research's list price is close to £250 and Acorn is hoping to offer it for under £200. It should be available later this year.

Software compatibility

The 512 will sink or swim on just how much IBM software it will run. Acorn is currently testing packages and trying to adapt them where possible. Incompatibility in many instances is likely to be caused by protection and direct use of IBM hardware. For example, version 1 of *Lotus 123* will work with a small Acorn screen driver patch, but later versions

GRIFFEN COMPUTERS

CASTLE WALK, LOWER STREET
STANSTED, ESSEX CM24 8LP

TELEPHONE, 0279 812295

INTERSHEET – The first of the ROM-LINK integrated rom packages from Computer Concepts. Menu driven, 40/80/105 column display, very fast, can be used with View or Wordwise, up to 16 spreadsheet in memory at one time. Supplied on two roms with reference manual, function key strip and quick reference card. **45.95 (a)**

INTERCHART – The second ROM-LINK package and designed for Intersheet giving Bar, Pie and Line graphs. **29.95 (a)**

INTERWORD – The new wordprocessor from Computer Concepts of the WYSIWYG type. Allows 40, 80 and 106 column mode. **50.95 (a)**

INTERBASE – The new rom-link database from Computer Concepts. (available soon). **P.O.A.**

ACCELERATOR – The most comprehensive compiler yet for the BBC micro. Compiles nearly all Basic, including floating point arithmetic. Compiles to intermediate G-code or to machine code. Comes on two roms with manual, disc and quick reference card. **57.95 (a)**

WORDWISE – The standard BBC word processor still very popular allowing all normal features for low cost. **30.95 (a)**

WORDWISE-PLUS – The new 16k version of Wordwise giving added commands for better use. Using its own language mail merging, indexing, continuous processing and multi column text can be utilised. **44.95 (b)**

TTS SPEECH ROM – This rom provides the most powerful and comprehensive speech system available for the BBC Micro. You can make your computer speak by simply typing in what you want to say. Requires Acorn Speech Processor. (Available soon) **36.95 (a)**

SPEECH ROM – Using the Phoneme system this allows infinite speech. Both pitch and emphasis can be changed and if wanted it can also sing. Requires the Acorn speech processor. **27.95 (a)**

Acorn Speech Processor – bought with above – 10.00 otherwise 17.25 (a)

PRINTMASTER – This rom allows Epson or Star printers to be fully utilised easily. Includes a versatile screen dump, enlarged text, various text manipulation commands. **27.50 (a)**

DISC DOCTOR – Still a very popular disc utility rom giving many extra commands to any DFS. **27.50 (a)**

ADVANCED DISC TOOLKIT – Probably the most versatile & compatible toolkit rom available. It works with the Electron, BBC B, BBC B+, Master, 6502, Z80, DFS, DNFS, 1770 DFS, ADFS. It adds more than 30 extra commands to the BBC. **33.00 (a)**

BEEB TEXT PLUS – A unique BBC Micro text-display enhancer. Ideal for eye-catching carousel displays and videotitling. **19.95 (a)**

ADVANCED DISC INVESTIGATOR – a very powerful disc utility for standard and non-standard discs. Will back up protected discs and edits any type of non-standard disc. **27.50 (a)**

FLOPPYWISE PLUS – A very useful utility rom with a variety of new commands including Clone, Protect, Rom load and many more. **28.95 (a)**

BROM PLUS – Enhanced version of the original Brom allowing a whole host of additional commands. Still with the best full-screen editor available. **31.95 (a)**

BETABASE – A very useful database program allowing up to 65000 record to be held. Many features include versatile printing, powerful sorting routines, outputs can be compatible with Wordwise or View. **21.95 (a)**

BETABASE UTILITIES – Adds many more features to Betabase including full disc sort, mail merging and many more. **11.00 (a)**

REPLICA III – Now enhanced to transfer even more of your tapes to disc. Now uses a data disc so you need only to buy one copy. Even works with the BBC B+. **13.95 (a)**

BETA-ACCOUNTS – The first of this integrated suite of programs allows Invoices and Delivery notes to be issued. 80 Column editing, sales ledger sheet automatically generated, multiple VAT rates. Can be used with Betabase. **21.95 (a)**

PROFILE – A procedure library allowing up to 100 procedures on a disc, easy merging of procedures with basic programs. **11.00 (a)**

FONTWISE – A new font program allowing up to ten different fonts to be used with Wordwise or ascii text using an Epson compatible printer. **11.00 (a)**

FONTWISE PLUS – Enhanced version of the original Fontwise allowing more embedded commands. Now gives 12 fonts. **17.95 (a)**

WORDEASE – A utility disc for Wordwise-plus giving many new features to this best-selling wordprocessor. Includes label printing, disc menus, versatile copying routines etc. **Disc version 18.95 (a)**

SPELLCHECK III – A rom based spelling checker for both View and Wordwise. A dictionary of 76000 words is supplied which can be expanded to over 17000 on a 100k disc. Much faster than the original versions. **28.60 (b)**

TOOLKIT PLUS An updated version of the popular Toolkit rom including a syntax checker and a full screen editor comparable to any other available. **36.65 (a)**

HELP II – Now extended to 16k, contains ALL basic keywords, ALL VDU codes, ALL FX codes. **28.95 (a)**

SLEUTH – A comprehensive basic debugging rom. It allows single stepping of basic programs, dual screen facility, breakpoints etc. **26.25 (a)**

EXMON II – A very advanced machine code monitor which now includes dual screen facility and a full screen memory editor. Also includes single stepping and breakpoints. **26.25 (a)**

MASTERFILE II – A general purpose file management package allowing large amounts of its information to be stored and processed. **17.50 (a)**

VIEW – Version 2.1 of Acorns wordprocessor. Allows 80 column editing, printing direct from memory etc. **44.45 (a)**

VIEW PRINTER DRIVER GENERATOR – Allows you to tailor a printer driver to your own printer. Comes with drivers for FX80, Juki 6100, Olivetti JP101 and others. **Disc — 11.00 (a)**
Cassette — 9.50 (a)

VIEW 3.0 – A version of View suitable for the BBC+. Comes with a cassette version of the Printer Driver Generator. **68.95 (a)**

HI-VIEW – A disc based version of this popular word processor for the 6502 second processor giving 47k of user memory. **44.95 (a)**

VIEWSHEET – Acorns spreadsheet rom giving 255 rows by 255 columns, multiple windows, works in any mode, wide use of function keys, fully compatible with View. **44.45 (a)**

VIEWSTORE – Acorns new database rom. Works in any screen mode, many powerful sorting facilities, can be spreadsheet or user defined card layout. max record size is 60k. Output can be sent to View and Viewsheets. Comes with comprehensive manual, utilities disc etc. **44.45 (a)**

VIEWSPELL – An automatic spelling checker using a dictionary of over 75,000 words. User dictionaries can also be created. **34.95 (a)**

VIEWPLOT – This rom will work with Viewsheets and Viewstore to draw bar graphs, line graphs and pie charts. (Available soon). **25.95 (a)**

GRAPHICS ROM – Acorns new 16k graphics rom giving many new commands for extensive graphics. Circles, ellipses, arcs, rectangles, parallelograms, segments and sectors etc are all available. Comes with manual and utility cassette. State B of B+ version. **25.95 (a)**

BASIC EDITOR – Acorns new editor rom allowing all the normal wordprocessor facilities to be used on basic programs. Features include block copy, block move and use of labels. **27.95 (a)**

TERMULATOR – A terminal emulation rom. Emulations provided are VT100, VT52, 4010, teletype, hardcopy and a special BBC terminal. Comes with user guide and a set of function key strips. **29.95 (a)**

ISO-PASCAL – A full implementation of the ISO standard supplied on two roms with two comprehensive guides. 6502 disc version also supplied. **54.95 (c)**

LOGO – A full implementation of the Logo language supplied on two roms. Comes with manuals, user guide, examples disc and reference card. **54.95 (c)**

COMAL – A full implementation of the International Standard for Comal. Comes with comprehensive manual. **44.95 (c)**

OXFORD PASCAL – A full implementation of the Pascal language including fully recursive procedures, type definitions and repeat until loops. Compiles down to compact P-code. **43.95 (a)**

REVIEWS

SOFTWARE

INTRODUCE A NEW CAST OF CHARACTERS

If you want to improve your print quality – print everything twice.
Patrick Quick reviews some software which does just that

Fontwise allows you to use your Epson (or compatible) dot-matrix printer to produce Near Letter Quality (NLQ) print. It does this by printing two lines of graphics mode dots, slightly offset to fill in the gaps. A third pass is used when necessary to produce deep descenders and underlines. The software is supplied on a copy-protected disc which includes 10 font definition files. It prints directly from files produced by *Wordwise* (or *Wordwise Plus*) or from straight ASCII files.

Fontwise can justify and proportionally space and can do both at once. The choice of font, page layout, etc can be set up from the printing menu and can also be changed during printing by including embedded commands in your *Wordwise* file. Many of the embedded commands are the same as those of *Wordwise*.

The manual says that single, dual and quad density graphics are needed on your printer. However, I found that a trusty old Epson MX80 F/T III (with no quad graphics) performed perfectly well on standard print although it could not cope with condensed modes. The condensed modes are, in most cases, rather illegible anyway.

Fontwise can only be used with Basic 2: Basic 1 gives an error when you try to load a document. As *Acorn User* has carried articles showing how to emulate almost all Basic 2 facilities in Basic 1, there isn't much excuse for this shortcoming.

Paged documents in *Fontwise* don't have page headers at all and the footer is always a centred 'PAGE 1', etc. Paging without headers is a lot less useful.

Your printer *must* be switched to auto line feed. This limitation isn't necessary and I found it annoying. If Clares had read its Epson manual it would have found that line feed (ASCII 10) always ends a line correctly but Carriage Return (ASCII13) gives varying results depending on the auto line feed setting. To be fair, other NLQ software shares the same problem.

Fontwise is written to be used with *Wordwise* but they don't get on with each other terribly

Layout etc is set up from the menu

well. If *Wordwise* is running when you re-boot to start *Fontwise*, strange things happen and you end up still in *Wordwise*. If you try to restart *Wordwise* after *Fontwise* has been used it locks up, even after CTRL-Break and you have to switch your machine off and on again.

It's not so easy to use the facilities of *Fontwise* from other wordprocessors: it does its own justification and line splitting, taking carriage returns as paragraph ends. For maximum flexibility you will also want to use the embedded commands, which is really only possible in *Wordwise*. As far as I can see, you

can't mix different fonts on the same line. The manual doesn't say you can't, but then it doesn't say you can and nowhere in the manual is there an example of a mixed line.

Fontwise can't be used over a network because it will only load text from drives 0 to 3. No OS commands are allowed, presumably to maintain copy protection.

In common with other NLQ systems, *Fontwise* produces fairly neat output which is easier to read than normal dot matrix mode but can't compare with daisywheel printing. It would be more useful for livening up the style of a school or club magazine than for business letters. The variety of fonts provided is good but more size options (eg, for headlines) and perhaps a font designer program would have added a lot to the package. Like other NLQ packages, *Fontwise* is slow because to the three passes for each line of print.

Finally, *Fontwise* is better than many NLQ packages and is reasonably priced, but don't forget that it needs Basic 2 and you can't take a backup copy.

Fontwise disc (40 or 80 track or 3"), £12 inc p&P and VAT: Clares Micro Supplies, 98 Middlewich Road, Northwich, Cheshire CW9 7DA. Tel: 0606 48511

BUSINESS

NEWS

Observer may supply Prestel

Talks are under way between *The Observer* and Prestel which may lead to the newspaper providing a full news service on the network.

Terry Bell, who handles the syndication of *Observer* material, said that a report on Micronet suggesting the deal was all but signed, was 'put out prematurely', but confirmed that negotiations were well advanced.

Prestel is thought to be keen to expand the news service that it offers. The *Observer* deal would provide a large quantity of up-to-the-minute reports from the newspaper's full team of journalists and correspondents.

Details of the service have yet to be thrashed out, but it is possible that it could include the weekly business reports produced by the newspaper.

The South Bank Show

The South Bank Polytechnic in London is running an Open Computing School as part of its Microcomputer Advisory Centre. Aimed at managers and office workers, it allows you to start at any time during the term and choose the number of hours you do each evening. The tuition covers all the important business packages, including spreadsheets, wordprocessors and Basic programming.

For details write to the Microcomputer Advisory Centre, Polytechnic of the South Bank, Borough Road, London SE1 0AA. Tel: 01-928 0482.

Here comes the 512

by Steve Mansfield

Master 512 upgrades are now in the shops and at a lower price than Acorn originally estimated. To help users through the software jungle Acorn is releasing a list of software compatible with the micro. And to beef up the business machine even more, Acorn looks set to release a version of Concurrent DOS for the M512.

The price of the 512 co-processor is £399, including bundled software and a mouse. This is £100 less than Acorn suggested when the Master series was first launched.

Not all normal Acorn dealers will be selling the machine, however. The 512 is going through selected dealers who are expected to give a high level of customer support, particularly when it comes to telling users which soft-

ware will run on the machine. To help, Acorn has produced a list, available on request from dealers or direct from the company.

Even so, the choice of software is bewildering. Peter Turnbull of Microbank – one of the first dealers to receive the 512 – suggests that potential buyers go to a dealer who also sells MS-DOS business machines, and who should have a wide range of software available to try. Alternatively, his company will try to obtain specific titles for customers.

Third party software

It is unlikely that Acorn will produce software for the machine itself, preferring to rely on third party suppliers. But it now looks almost certain that the company is to release Digital Research's Concurrent DOS for the Master.

Concurrent DOS allows up to four programs to be run simultaneously – memory permitting – with the user able to switch between them at any time. You could, for example, print out one wordprocessor document while editing another, or switch between a wordprocessor, spreadsheet and database.

The software is made by Digital Research and normally sells for around £250. No price has been fixed by Acorn, but there are suggestions that it will sell for between £100 and £200 – probably closer to the latter. The package should be available through dealers within the next couple of months.

For more details, contact Acorn on (0223) 214411.

See Bruce Smith's review of the Master 512 co-processor on page 153.

Two more modems

Newly released: two modems aimed at the business market, from by Miracle Technology and Pace.

The Miracle product (right) is a stripped-down version of their state-of-the-art WS3000 series. Known as the WS4000, the £150 modem offers full Hayes compatibility, auto-answer, auto-dial and a range of speeds.

The WS4000 can also be upgraded to give 1200 and 2400 baud full duplex, tone dialling and a host of other features.

Pace's product is actually a group of modems known as Series Four. The basic model includes 300 and 1200/75 baud options. Two further models are available allowing 1200 and 2400 full du-

plex operation, and the basic model can be upgraded.

Automatic mode selection, call monitoring, built-in LCD display, Hayes compatibility and microprocessor control are some of the more outstanding features.

For more details: Miracle Technology Ltd, St Peter's Street, Ipswich IP1 1XB. Tel: (0473) 216141. Pace Micro Technology, Juniper View, Allerton Road, Bradford BD15 7AG. Tel: (0274) 488211.

Bufferbox to take your calls

A new buffer allows people to send electronic messages straight to you without going through a mailbox system first. The Telepost Bufferbox incorporates a modem to answer incoming calls so that messages can be dumped in a buffer until you're ready to read them with your own micro.

Messages can be queued, and an LED display tells you when there's something in the buffer waiting to be read. The Bufferbox costs £620 – but with heavy use that could work out cheaper than a conventional mailbox.

Contact Telepost at 43 Howards Thicket, Gerrards Cross, Bucks SL9 7NU. Tel: (0753) 882028.

Does your BBC have a one track mind?

True multi-tasking will put you out of your misery!

Your BBC now has the true multi-tasking potential of much bigger machines.

CMS Soft have cracked it!

This module, packaged as a ready-to-fit sideways ROM, brings you a robust system that holds its own in the most demanding industrial and laboratory conditions.

And there is no interference with normal BASIC functions; Multi-Basic enhances the power, speed and readability of the best BASIC Interpreter there is.

£39⁹⁵ incl. p+p

Real time Programs now possible on the BBC Micro.

• A serious tool – not an 'evaluation package'

• No extra hardware required

• No modifications needed to your BBC Micro

• Faster than procedure driven tasks

So if you want:

- full MULTI-TASKING with up to 8 background tasks running concurrent with the main program
- BBC Basic CONTROL FEATURES powerfully enhanced
- the ability to run REAL TIME PROGRAMS
- control of PHYSICAL INPUT/OUTPUT
- 5 real-time COUNTER/TIMERS
- 8 real-time TASK INTERVAL TIMERS
- a COMPREHENSIVE MANUAL that describes each command in detail, with many practical examples

MULTI-BASIC is what you need

MULTI-BASIC

NEW!! MASTER-ART for the BBC Master 128

Produce amazing graphics with this exciting new Art program specifically written for the MASTER 128. A new, very easy to use graphic tool for the artistic and fun for everyone!

Features

*Uses all 64k of sideways ram

*Circle, ellipse, line, rubber banding, spray, radial line, square, inverse, Gcol, colours, text

*Input device; keyboard, mouse or trackball

*Easily create screens in Mode 2

*Menu driven – Pop up windows

*Scroll between screens in memory

*Switch between shadow and normal screen

*Copy and paste between screens

*Animation *Clock *Printout facility

Double disc set 40 or 80 track DFS.

Please specify when ordering.

Send £25 inc. P&P to:

NUMBER 3 SOFTWARE

BBC's discful of free software

Free software is on offer to users of BBC Soft's *Ultracalc 2* spreadsheet.

If you send a blank formatted disc, plus £2-worth of stamps to cover postage, you will get the disc back with a range of utilities, including a business graphics generator, to draw a variety of graphs from an *Ultracalc* file, and programs to include bold and underlined text in your spreadsheets, to draw and remove lines between columns and to import and export data between *Ultracalc* and other spreadsheets.

You can also download the files from OwlTel, BBC Soft's viewdata service, which your modem can reach on 01-927 5820. Snail mail users should send their discs to BBC Soft, 35 Marylebone High Street, London W1M 4AA.

3D spreadsheets

Cambridge Microsystems has launched a spreadsheet aimed at the business, scientific and higher education markets. *Matrix-3* runs on the Acorn Cambridge Workstation and Cambridge Co-processor systems.

It works in three dimensions with up to 10,000 rows and columns and up to 100 pages, plus all the facilities you would expect of an advanced spreadsheet.

Cambridge Microsystems, 137 Ditton Walk, Cambridge CB5 8QD. Tel: (0223) 214696.

Choose a card

The *Eureka!* card from Watford Electronics gives 14k more memory than a standard second processor for hi-versions of languages and applications like Basic, *View* and *Wordwise Plus*.

You also get two banks of sideways RAM and automatic shadow memory. The device plugs into the processor socket of a BBC micro.

New hard discs

by Steve Mansfield

In a new deluge of hard discs come three from Amcom and a low-cost unit from Acorn to complement its two existing drives.

Amcom has announced three hard disc drives with capacities of 10, 20 and 40 Megabytes. These range in price from £850 to £1400 (excluding VAT). They are compatible with any BBC micro running the ADFS, such as the Masters.

To back up the Winchester, Amcom has brought out a number of tape streamers. These provide a fast way of backing up large amounts of memory. A streamer for the Amcom hard discs costs £1200, while one designed for use with Acorn hard discs is £50 more.

Acorn's new drive is a 20M unit. Unlike the existing 10M and

30M drives, it is not being sold as a network files server, but rather as a stand-alone unit aimed squarely at Master owners.

The drive comes complete with various disc utilities, but not the files server software. That makes it possible for Acorn to bring the price down to £1085.

At the moment Acorn has no plans to market a tape streamer. Andrew Hinchley, Communications Products Manager, explained that he has 'never liked the reliability of what's on the market. As soon as we find a tape streamer that we are totally confident with, we'll go ahead and market it.'

Amcom can be contacted at 35 Carters Lane, Kiln Farm, Milton Keynes MK11 3HL. Tel: (0908) 569212. Acorn is at Fulbourn Road, Cherry Hinton, Cambridge CB1 4JN. Tel: (0223) 245200.

Hi-res monitor from Hantarex

A new green screen monitor - ideal for people who stare at spreadsheets and wordprocessors all day - has been launched by Hantarex.

The HX12 is a 12-inch model, with RGB, composite and audio inputs. The high resolution image is suitable for 80 column modes and has an anti-glare screen. The price is a fraction under £80.

More details are available from Hantarex (UK) Ltd, Unit 2, Lower Sydenham Trading Estate, Kangley Bridge Road, London SE26 5BA. Tel: 01-778 1414.

Artistes and accountants go Gold

Accountants and performing artists who want to keep in touch can now do so with new user groups on Telecom Gold.

The British Telecom service was chosen by the Institute of Chartered Accountants of England and Wales (ICAEW) as the host for a closed user group offering electronic mail, telex and information services. A subscription gives accountants full use of all of

Telecom Gold's services, including access to online databases such as World Reporter.

In addition, subscribers to the ICAEW network will have access to two special databases. The first is Pergamon Infoline's JordanWatch which carries financial data on around 60,000 UK companies. The other is Strathclyde University's AIMS News, with information on EEC and

Government assistance schemes.

The other new closed user group is Artslink for musicians and performing artists. Members include Sadler's Wells, the Scottish National Orchestra and leading agents. The service contains information on artists, agents and theatres.

Telecom Gold can be contacted at 60-68 St Thomas Street, London SE1. Tel: 01-403 6777.

BUSINESS WORDS OF WISDOM

Our wordprocessing expert presents another bunch of handy hints, technical tips and verbal variations for users of *View* and *Wordwise*

Jacquetta Megarry

SHORTCUTS FOR STANDARD TEXT

Once you've been word processing for a while, you'll find that many of your documents fit certain patterns. You'll also probably have found that you have to type in an infuriating number of odds and ends every time you switch on. Here are two shortcuts that let the system take care of things automatically.

The first is sometimes called a 'template' or dummy file: an empty file that contains any format commands and/or standard text that

```
*FX22B,1
*TV0,1
MODE 3
*KEY1 Acorn User IM141/
3 Drury Lane IMLondon IM
WC2B 5TFIMIM
*KEY2 Anything you wan
t key 2 to produce
*WORD
*.
```

Figure 1. Typical !BOOT file for *View*

you need regularly. For example, a correspondence template might contain your letterhead, the date and your signing off greetings. Load in the template before inserting your letter into the body of the document. This system not only saves time, but also guarantees that your work will maintain a standard appearance. Keep as many templates as you have standard documents that you use often.

The second shortcut is to create a 'boot' file to store your start-up commands. The disc system will search for a special file called !BOOT whenever you 'boot' that disc, ie, hold down Shift, press and release Break, then release Shift.

Although you can create !BOOT files in Basic using the *BUILD command, they're quicker and easier to write and edit within your wordprocessing system. Simply save your instructions giving !BOOT as the filename and then enter *OPT4,3 to 'enable' the !BOOT file. Copy the !BOOT file (repeating the *OPT4,3 to make it 'boot-able') on all future working discs. If you want to prepare a batch of blank but formatted working discs, simply

load the !BOOT file into your wordprocessor and save it to each disc in turn, not forgetting the *OPT4,3 command.

In the two examples (figures 1 and 2), type the commands as you would text, remembering to press Return at the end of *each* line

```
*TV255,1
*KEY1 !!!ds!"
*KEY2 !!!de!"
*KEY12 !!!oc27,45,1!"
*KEY13 !!!oc27,45,0!"
*WORDWISE
*.
```

Figure 2. *Wordwise* !BOOT file

including the last. Include any commands you need, such as *FX6 if your printer is set to ignore line feeds. You can program as many of the red function keys as you like, though you may need an extension to your keystrip to remember what you've put where.

The first !BOOT file is for *View*: you need *FX228,1 if you want to program function keys to produce strings. The second line makes the mode 3 rock-steady (by switching off the interlace) but it only works when you change mode so put this instruction *before* the Mode 3 command. The next line programs red key f1 with a useful address: press CTRL-Shift-f1 in Edit Mode and the address will emerge complete with new lines wherever there's a |M in the boot file (equivalent to pressing Return). You can program keys f0 to f9 in exactly the same way; see below for how to define Copy and the arrow keys. Finally, *WORD selects *View* and *. catalogues the disc.

Notes for Master users: (1) replace MODE 3 by MODE 131 to benefit from the extra memory (bytes free jumps from 12,542 to 28 926., 2) you won't need the *TV0,1 as this is set as the start-up Configuration.

The *Wordwise* boot file's first line lowers the screen display by one line - handy if you're using a television screen for wordprocessing. Defining the red keys works as in *View*, but here I've employed them to store embedded commands. In 'recent *Wordwise*' (as I shall call *Wordwise Plus* and 1986 *Wordwise*), keys 1 and 2 are thus defined to switch on and off double-strike printing; 'old' *Wordwise* users replace ds by oc27,69 and de by oc27,70. Keys 12 and 13

are the left and right arrow keys; here they switch underlining on and off.

These two keys can be especially useful for defining any effect you need often, because, when they are pressed with CTRL, the cursor scoots neatly from word to word. ('Recent' *Wordwise* users can substitute *us* and *ue* for the oc codes, giving full preview of underlining effects on screen.)

You can also program the down and up arrow keys and Copy by numbering them 14, 15 and 11 respectively. Incidentally, you can use capital letters for embedded commands if you prefer, but be consistent: the red keys will produce *exactly* what you tell them to, in lower-case or capitals.

Personally, I use lower-case for all commands as it's quicker to type, but here I've shown commands like OPT, FX and |M in capitals to make them stand out. The only command that *needs* capitals is MODE 3.

FURTHER READING

Now, a word about some recent publications. *Word Processing on the Home Computer* is an independent user group with a readable magazine. It aims at Amstrad, Atari and BBC micro owners and contains interesting insights into how the systems differ. One year's membership (six issues) costs £6 from *Word Processing*, PO Box 67, Wolverhampton.

For anyone interested in professional typesetting from wordprocessor disc files, *Typesetting for Micro Users* is an invaluable companion. It helps newcomers to communicate effectively with typesetters, guides them through the concepts and activities and provides a wealth of useful examples.

The book includes model coding forms, an explanation of typesetting terms and an index. It costs £9.50 from Quorum Technical Services, Sandford Park Trading Estate, Cheltenham, GL52 6XH.

Finally, *View* users who have lost their manuals or are foxed by printer driver problems may like *Help Screens from View*. Although it presents the same information that can be found in the printed manuals, this friendly disc is easier to use, especially if you want to go

beyond bold and underlining printer effects or have a non-standard printer. However, you cannot call a help screen while in Edit Mode, and the disc adds a *fourth* (!) meaning for each function key. The disc is Master-compatible and costs £9.95 from Ceedsoft, 58 Saville Road, Blaby, Leicester.

DATE-STAMPING AND THE MASTER

Apologies to C G White, M J Skaife d'Ingerthorpe and other readers who found my May tip for accessing the Master's clock/calendar in *View* incomplete: press !T for time and !D for date in Edit Mode. What Acorn failed to tell me is that you *must* have an Edit Command in the left margin of the same line: press Shift-f8 and type something like LJ. Now !T or !D in your text will produce the time to the instant (uses, anyone?) or the current date (14 August 1986) when you preview (using SCREEN) or print.

It doesn't seem to matter which Edit Command you use, as long as there is one on that line. No-one at Acorn could explain why this facility had been provided and then had its usefulness restricted so much. *Wordwise* users can access the Master's clock/calendar after a fashion, too, using the operating system embedded command: *time in green will be replaced by the day, date and time all on a line of its own when you preview or print. Personally I can't find a use for this as I can't edit it, but perhaps someone out there can?

YOU CAN COUNT ON IT

Thanks to Bob Tennent of Glasgow for pointing out that *Wordwise Plus* users can execute a statement such as PRINT "0123456789" from a segment to number the first ten columns of preview screen: mark and copy these numbers seven times to number all 80 columns. If your system also does the *FX155 trick (see Colourful Grid Check, right), you can combine these to get something like a *Wordwise* 'ruler' as follows.

First, embed seg0 at the top of main text. Then select segment 0 and enter:

```
*FX155,n choose n as above/below
PRINT "01234..." 80 numbers
VDU14 optional
```

Enter these as text (*don't* embed them), followed by Return. Return to main text and preview: you should now have paged preview with overlaid numbered lines for checking 80-

column format. Leave these instructions in segment 0 and just remove the f1 (green) in front of seg0 if you want to cancel the effects.

To load this in automatically, first save whatever instructions you want as, say, PREVIEW. Then create (or add to) your !BOOT file as follows:

```
*wordwise
:select segment 0
:load text "PREVIEW"
:select text
```

Bob Tennent has also managed to insert screen dumps into *Wordwise* printout. Suppose you have a mode 1 picture saved on disc as a memory dump called PICTURE and want to dump it using a *Printmaster* ROM. Enter Segment 0 (or whatever segment is free) and type the following little program:

```
VDU22,1
*LOAD PICTURE
*GDUMP 0 0 2 1 20
VDU22,0
```

The first line puts the system into mode 1 (to match your picture) and the last restores mode 0 (for *Wordwise* preview). The second line loads in the picture and *GDUMP tells *Printmaster* how and where to dump the picture (substitute as appropriate if using a different screen dump program). Return to main text and embed seg0 at the place where you want the picture. By inserting a *WINDOW command before the *GDUMP, *Printmaster* users can control exactly which bit of the picture to use.

CONTROLLING SCROLLING

Many people have trouble with controlling scrolling, especially in long documents. You have to watch carefully for the bit you want, and if you miss it when it flashes past, you have to start again from the Menu. If you'd rather have the scrolling pause automatically, *Wordwise Plus* users can put VDU14 in a spare segment and embed a seg command to execute that instruction at the top of the document.

For example, if segment 0 is empty, just type in VDU14 (or vdu14) and enter embedded command seg0 at the top of your text. Now press Menu option 7 to see a 'paged' preview: press Shift to advance to the next 'page' - there is plenty of overlap. Take the seg0 command out of your document before printing it, though, or you'll keep having to press Shift to complete the printout.

Users of recent versions of *Wordwise* can control scrolling in preview mode by pressing the space bar to pause and almost any black key (not Break) to restart. If your *Wordwise* is an

older version, you must hold down Shift and CTRL together to pause and release either or both keys to restart. (*Wordwise Plus* users can use whichever method they like.)

COLOURFUL GRID CHECK

If you vary margins and line length or use a lot of tabs and indents, it's not easy to check the exact effects in *Wordwise* preview and you may have to resort to draft printouts. Thanks to Gary Crawford of Crawley Down for a neat tip for superimposing a grid of 80 vertical lines so you can count characters and can check the alignment on your preview screen. The effect depends on a *FX155,n call that uses a quirk of the ULA system in recent Bees and Masters - but won't work at all in older Bees: to test your machine, try *FX155,1 with or without text then press preview, or use Basic (enter MODE 0 first).

Within *Wordwise*, embed FX155,n at the top of your text using embedded command * or OS"" depending on which version of *Wordwise* you have. The number n controls both the colour and positioning of the lines. I'll explain this with examples, using the *Wordwise Plus* version. *FX155,1 produces a red grid, *FX155,2 a green grid and so on up to 15; if you really want flashing green and purple lines, try *FX155,10. (*Wordwise* users may need to use the form OS"FX155,1" instead, or may have too early a version for operating system commands at all.)

So far, these numbers all produce grid lines to the left of the characters so that if you've set lm10 you'll see a clear left margin of 10 columns with text beginning to the right. You may prefer to see each character centred on a vertical line; if so add 48 to each colour number. Thus *FX155,49 produces a different version of the red grid, *FX155,50 of the green, and so on. (Try adding 16 or 112 instead to see other positions.)

The effect won't work at all in 40-column preview (the kind you get with long documents unless you've Master or a memory expansion in a Beeb). But if it works on your system and you find it useful, experiment to find the colour and positioning of the lines which suits you best; this depends on your screen as well as whether you prefer to count lines or spaces. Then make a note of the command or, better still, include it in a !BOOT file (see above) on your working disc. The FX call doesn't affect your printout or editing in any way, so you need not remove it from a document unless you find it distracting.

ACORN FORUM

The 1770 disc controller chip is capable of more operations than your DFS ever dreamed of. Mike Barwise examines how to conduct a dialogue with the chip itself

In the July 86 issue, David Atherton covered the programming of the Western Digital 1770 disc controller chip, using the 'legal' OS commands. This month I am discussing programming it at the lowest level of control available to the user - direct dialogue with the chip itself. This is unnecessary in normal read/write circumstances, but the 1770 is capable of certain operations which are not implemented in the DFS, and which can be valuable.

The 1770 is in fact a very simple chip to drive. Its initially bewildering range of options can be reduced quite easily to a working set of commands which suit the hardware implementation in use, and the chips's architecture is extremely memorable and sensible. (In passing, it is worth noting that anyone using an independent FDC with a 1790 series or 2793 chip can directly transplant practically all of the following information.)

Drive select

The 1770 knows nothing about multiple drives: it is only aware of the drive currently selected by external hardware. As the drive select logic and the base address of the chip itself will vary depending on the machine you are using (BBC B with independent FDC, ditto with Acorn FDC, B+, Master) I would refer you to your technical manual and to David Atherton's article for details.

The 1770 performs the head positioning and data read and write operations on any currently selected disc surface. Each operation is independent, so a disc transfer typically consists of:

- 1 restore head to track 00
 - 2 read sectors 00 and 01 (catalogue)
 - 3 analyse file parameters
 - 4 seek to first track of file
 - 5 read (or write) sectors from first to either end of track or end of file if sooner
 - 6 if end of track but not end of file, step to next track
 - 7 repeat (5) and (6) to end of file unless error.
- It will be seen from above that there are two main kinds of operations the 1770 can perform: head movements and data transfers.

This division is visible throughout the 1770 command and status set, and allows a simplified device architecture, as the majority of control and status bits are dual tasking depending on the type of operation. This means that two separate error checking routines will be needed, one for head movements, the other for

Type	Command	Bits							
		7	6	5	4	3	2	1	0
I	Restore	0	0	0	0	h	V	r ₁	r ₀
I	Seek	0	0	0	1	h	V	r ₁	r ₀
I	Step	0	0	1	u	h	V	r ₁	r ₀
I	Step-in	0	1	0	u	h	V	r ₁	r ₀
I	Step-out	0	1	1	u	h	V	r ₁	r ₀
II	Read Sector	1	0	0	m	h	E	0	0
II	Write Sector	1	0	1	m	h	E	P	a ₀
III	Read Address	1	1	0	0	h	E	0	0
III	Read Track	1	1	1	0	h	E	0	0
III	Write Track	1	1	1	1	h	E	P	0
IV	Force Interrupt	1	1	0	1	I ₃	I ₂	I ₁	I ₀

Command summary

h = Motor On Flag (Bit 3) (1770 and 1772 only)

h = 0, Enable Spin-Up Sequence
h = 1, Disable Spin-Up Sequence

V = Verify Flag (Bit 2)

V = 0, No Verify
V = 1, Verify on Destination Track

r₁, r₀ = Stepping Rate (Bits 1,0)

r ₁	r ₀	WD1770-02	
		WD1773-02	WD1772-02
0	0	6 ms	2 ms
0	1	12 ms	3 ms
1	0	20 ms	5 ms
1	1	30 ms	6 ms

u = Update Flag (Bit 4)

u = 0, No Update
u = 1, Update Track Register

Flag summary

m = Multiple Sector Flag (Bit 4)

m = 0, Single Sector
m = 1, Multiple Sector

a₀ = Data Address Mark (Bit 0)

a₀ = 0, Write Normal Data Mark
a₀ = 1, Write Deleted Data Mark

E = 30ms Settling Delay (Bit 2)

E = 0, No Delay
E = 1, Add 30ms Delay

P = Write Precompensation (Bit 1)

P = 0, Enable Write Precomp
P = 1, Disable Write Precomp

Type II & III commands

data transfers, otherwise curious results will be returned. Western Digital in fact divides operations into four types. WD type 1 commands are the head movement operations, types 2 and 3 are data transfer operations, and type 4 is a single special command, Force interrupt.

Device architecture

The 1770 itself occupies four bytes of mapped in/out. All four are read/write locations, but the lowest is dual purpose. This is the Command register (write) and Status register (read). (Note that this distinction has nothing to do with disc read/disc write.)

The remaining three (in ascending order) are the Track register, the Sector register and the Data register. The first two behave just like static RAM, and the Data register is read from or written to during transfers on a byte-by-byte basis under the control of the BBC NMI.

The table (left) shows the function of each bit in each of the byte-wide 1770 op codes. The most significant three or four bits of each are fixed, and the rest are variable according to the detailed requirements of the current drive interface. You can now see the relevance of the division of the commands into two sets: the control bits are consistent in function within type 1 commands, and different but equally consistent in function within types 2 and 3. From type 4, the only really useful command is &D0, which is used to terminate an operation in progress and re-initialise the 1770.

Similarly the status register (table 2) contains certain bits which dual-task according to command type: bits 1, 2 and 5.

When experimenting with the 1770, it will probably pay to use all the 'safe' options: Enable Spin-up, Verify On Destination, Add Setting Delay.

The Update Track Register bit is used if you use Step to move between tracks, but it is equally valid to use Seek every time, and this automatically keeps the track register content correct. Single sector transfers are much easier to handle than multiple sector transfers, as the latter *always* terminate with a 'Sector not found' error on completion. Only normal data marks are used, and Write Precomp should not be used in single density. In double density, it should be enabled for all write operation to disc where the target sector is roughly in the innermost third of the data area - track 27 decimal onwards (40 track) and track 52 decimal for 80 track.

Driving the 1770

Let us look first at the basic mechanisms of 1770 operation. The first most important point is that (with the exception of the type 4 command) no command op code should be

ACORN FORUM

sent to the chip while it is busy (status bit 0 set). This bit should be tested before sent a command. Note that due to an architectural bug, is possible for this bit to remain set after a system reset. If you know you are *not* perform-

number. Seek will fail if you have selected too fast a step rate for your drive.

Step operates in a similar manner, except that no target parameter is needed, and the direction used is the last known direction.

Bit Name	Meaning
S7 MOTOR ON	This bit reflects the status of the Motor On output.
S6 WRITE PROTECT	On Read Record: not used. On Read Track: not used. On any Write: it indicates a Write Protect. This bit is reset when updated.
S5 RECORD TYPE/SPIN-UP	When set, this bit indicates that the Motor Spin-Up sequence has completed (6 revolutions) on Type 1 commands. Type 2 & 3 commands, this bit indicates record Type. 0 = Data Mark. 1 = Deleted Data Mark.
S4 RECORD NOT FOUND (RNF)	When set, it indicates that the desired track, sector or side were not found. This bit is reset when updated.
S3 CRC ERROR	If S4 is set, an error is found in one or more ID fields; otherwise it indicates error in data field. This bit is reset when updated.
S2 LOST DATA/ TRACK 00	When set, it indicates the computer did not respond to DRQ in one byte time. This bit is <i>reset</i> to zero when updated. On Type 1 commands, this bit reflects the status of the TR00 signal.
S1 DATA REQUEST/ INDEX	This bit is a copy of the DRQ output. When set, it indicates the DR is full on a Read Operation or the DR is empty on a Write operation. This bit is reset to zero when updated. On Type 1 commands, this bit indicates the status of the IP signal.
S0 BUSY	When set, command is under execution. When reset, no command is under execution.

Status Register description (WD1770-02 and WD1772-02 only)

ing a disc operation, but Busy is still set, a Force interrupt (&D0) can sent at any time to the command register. This will clear the Busy status, but the currently selected drive will spin up. Unless the drive is ready (door closed, disc in place) the drive will remain spun up, as the 1770 looks for six index pulses before termination. A hard reset after the &D0 op cures this, but about 50 microsecs must elapse between sending the op code and the reset to allow the command to execute.

As soon as you are not Busy, the drive head should be Restored. This command retracts the head to track 00 and loads the Track register with zero. Note that every time you switch to a new surface, you must Restore. Restore does not require any parameters: track zero is implied. After Restore has terminated, status bit 2 should be examined to establish whether the operation was successful.

The next command is Seek. After your Restore, the Track register holds zero. To seek to a given track, you load the track number (remember that numbering starts at zero, not one) into the data register, and then send the Seek op code you have derived from table 1. Internal arithmetic is performed, and the direction and extent of the seek are automatically established. If Spin-up has been selected, the drive *must* be ready. Busy is monitored by polling until the operation is complete. If the Seek was successful, status bit 4 is clear (zero) and the Track register contains the target

Thus after a step out, the next step is also out and so on. Step in and Step out are used to change direction and also perform the *first* step in that direction.

Data transfer commands.

All read and write commands use parameters stored on disc at the time of formatting. The length of sector to be transferred is one of these parameters. However, the BBC DFS (most series and sources) expects a specific sector length of 256 bytes. Thus sectors of other lengths cannot be read by the DFS.

After a data transfer command is issued, the 1770 issues one NMI for each byte to be transferred. In single density, the NMI occurs at intervals of 64 microsecs, and at double density, at intervals of 32 microsecs. Note though that the NMI to byte transfer delay (your software run time) must not exceed 45 microsecs in single density or 22 microsecs in double density. These times are from issue of the NMI (not recognition of it) to effectively the start of the instruction after the read or write byte from/to the 1770. The NMI recognition time is generally about 7 microsecs.

Control is transferred to &D0 which normally contains an RTI, effectively masking the NMI. But before calling a data transfer command a 'JMP routine' should be installed there. 'Routine' is the entry point of suitable machine code in the user program. Bear in mind that you *must* save all registers on the

stack before doing anything else, and that a trivial 'idler' foreground task should be set up, to avoid the user program advancing during disc transfer. This last is a common fault, as you can inadvertently overwrite data while you are sending it to disc.

If you fail to service an NMI from the 1770 in due time, disc sector Write operation is terminated immediately, and status bit 2 is set. During a Read sector from disc, failure to service (lost data) does not terminate the command. The byte unserved is lost, but transfer continues to the end of the data field (sector). However, there will always be a CRC error as well as a Lost Data flag.

When using the Read sector and Write sector commands, the track is assumed to be already selected by a previous Seek or Step, and the user must load the required sector number into the Sector register before issuing the data transfer op code.

The Read Address command is useful for establishing two things: the current head position and the approximate format of the disc.

When the command is issued (no parameters), the 1770 looks for the first ID field it can find and transfers it to the micro. Six NMIs are generated: one for each byte of the ID. The bytes correspond to:

- 1 Track number
- 2 Side number
- 3 Sector number
- 4 Sector length code
- 5 & 6 CRC

CRC error is also indicated in the status register (bits 3 & 4).

The final commands are Read and Write Track. Write track primarily equals Format: there isn't space to go into formatting here, as the operation consists of setting down a complete track's worth of data including gaps, flags and embedded op codes for the 1770.

Read track, however, is a very useful command. This dumps the whole data stream (user data, gaps, headers, etc) straight to memory. There will be lots of data (more than 3.5k typically at single density), but corruption of ID headers and so on will not prevent access, so easily screwed discs can be recovered.

There will always be slight corruption of gap bytes, due to disc speed variations and so on during previous disc operations, but this should be clear by comparison with similar gaps in consecutive sectors. If you can find the damaged ID or whatever, the Write track can be used to restore the disc to perfection after corrections have been made.

See *AU* April and May for details of how to interpret the various parameters listed above.

DUAL DRIVES FOR LESS THAN £17?

Convert your single disc drives into duals for only £16.95 inc. VAT

- Specially designed circuitry eliminates the need for any tools
- No soldering
- Simply plug in for instant dualling
- No mess
- New improved longer cable reaching the back of the computer
- No need to take disc drives apart to change links

The Viglen DUCK (Dualling Up Connector Kit) can convert single drives to duals, instantly!

Just plug the **Viglen Duck** into the BBC micro and any two single disc drives to create a dual disc drive. Drives will be configured Drive 0 and Drive 1 automatically.

- Fast Back-Up
- Fast Copying of Files

The **Viglen Duck** will dual-up any make or type of single disc drives with PSU (power supply unit). It will also work on single and double-sided drives in any combination. If you have disc drives without built-in PSU, then you will require a dual power connector for the BBC micro - available from Viglen for only £8.00 inc VAT.

- Postage and packing £2.50 inc. VAT.
- Official Orders from Government and Educational Establishment welcomed.

Orders to: Viglen Computer Supplies
Unit 7, Trumpers Way, Hanwell W7

Credit Card holders may order by telephone: **01-843 9903**

YOUR ROMS WOULD BE HAPPIER IN A VIGLEN ROM CARTRIDGE SYSTEM

The safest way to look after your growing collection of ROMs is to store them in Viglen's specially designed cartridge systems, this not only keeps them happy, but also removes the risk of damage to your BBC micro.

There are two systems - the 'Standard' and the 'Low Profile'. Viglen is the leading producer of both.

ADVANTAGES OF VIGLEN ROM CARTRIDGE SYSTEM

- All cartridges are gold-plated for durability and reliability, unlike others which are only silver plated.
- No need to switch machine off between cartridge changes.
- Insert and remove 'Wordwise', 'View', 'Disc Doctor', etc., at will, from your micro in absolute safety.
- Low, low power consumption unlike other systems.
- Save on memory.

PRICE FOR COMPLETE KIT, including 1 cartridge, 1 Cable Assembly, 1 Blanking Off Plate (used if system is removed), 1 Socket Cover (used when no cartridges are resident), 1 Cartridge Storage Rack.

£15.95

Extra Cartridges: £2.95 each, four for £11.00, ten for £26.50. Kit comes with 1 ROM Cartridge. All prices inc. VAT.

THE STANDARD SYSTEM

The Standard System used extensively in education is preferred, due to its robust construction and ease of use.

Personal Callers
Mon - Fri 9.30-5.30pm Sat 9.30-2pm

LOW PROFILE SYSTEM

With the sideways entry on the low profile system access to the escape and tab keys are slightly restricted. However Viglen betters its rivals in this respect by being 3mm lower.

Snapper King turns nasty!

We advertised some months ago that our Harold had broken 2000 on Snapper and that he was going for 3000. Well he is still some 800 short of the target - and he's not very pleased about it. If you visit our shop to see our wide range of BBC hardware and software, just don't mention anything about Snapper. Look at our printers, keyboards and books by all means, but remember, Harold keeps the hammer behind the counter!

HELP FOR VIEW USERS

HELP SCREENS FOR ACORN SOFTWARE VIEW is a utility to help you, the user, obtain the benefits of the excellent VIEW wordprocessor. The commands and printer highlights are displayed on the command screen by pressing a function key. An example document is included for you to examine and print.

No more worries about line feeds or pound signs! Printer drivers are included for Epson compatible matrix printers: NLQ matrix drivers for Canon PW, Epson LX and Juki 5500, Star SG, Citizen C120D, and MP165. A special driver allows the Canon PW to switch between NLQ fonts. Daisy wheel printers supported are Quendata, Brother (with red ribbon switching) and Triumph Adler. These printer drivers allow (provided the printer does) Bold, Underline, Sub/Superscript, Enlarged/Shadow, Italic, and NLQ.

Experienced users have found that HELP SCREENS has added to their knowledge and novices have quickly become proficient users of VIEW.

Supplied on 40/80 track disc and tested with View 1.2, 2.1 and 3 for BBC B, B+ and MASTER. Price £10.50 including P&P. (Cheque/PO. No cash please.)

■ **Problems?** try R-SOFT utilities! 1. HOW-TO: An essential collection of software and instructions for frustrated new disc owners who want to move their programs to disc. 3. ROMPULL, + TAPEDUMP. 4. AUTOMATIC DISC MENU: Includes sideways-RAM version, can boot from ROM, works with 2nd 6502. 6. SWROM*: puts your Basic/machinecode programs in ROM format. 7. RFS-GENERATOR: Generates ROMs for the *ROM filing system. This does not use DFS workspace and is an ideal tool to run nasty programs from disc. All above packages £5.00 each. 13. D-MASTER-V2: Superb disc backup program; needs 8271 and swRAM; £8.00; on 16K Eprom: £12.00. Upgrade for D-MASTER owners: £5.00/£9.00 16. OPUS SD/DD/CHALLENGER: Disc-Menu, Disc Editor, Disc Indexer, etc.

We must remind advertisers that we cannot carry advertisements which incite readers to break the protection and therefore copyright of commercial software

Please enquire for further details. 17. D-EDITOR: based on D-MASTER-V2: will edit any disc D-MASTER-V2 can backup! £8.00/£12.00 Please send sae for full list to R-SOFT, 22 Marriotts Close, Felmersham, Bedford MK43 7HD. Tel: (0234) 781730.

■ **Wordprocessing** printer routines providing maximum embellishment, even spacing achieved in justified mode including proportional text. Available for most daisywheel printers. Ribbons and printwheels competitively priced, eg Juki 6100 S/S £1.40, M/S £2.40, daisywheels £15.85, p&p extra. SAE details to New Horizon, PO Box 35, Plymouth, tel: (0752) 550700.

■ **Hackers Holy Grail** £12.50, subjects covered: telephone system, finding unlisted phone numbers, writing auto-dial software/listsings, U.S.A. sorces. Microchips 56 Waterloo Road, Southampton.

■ **Flip-over function strip holder**. Holds 10 strips in their own plastic sleeve. £5.25. With design software supplied on disc, £6.65. Eproms (27.28) £3.20. Computer Repairs, 2 Austins Place, Hemel Hempstead, Herts HP2 5HN. Tel: (0442) 217624.

SMALL AD SERVICE

Please include your cheque for £11.50 (inc. VAT) made payable to Redwood Publishing (please note: no POs; cheques only). This is the standard fee. Don't forget your name, address and phone number. Send cheque plus form to Acorn User Small Ads, 141-143 Drury Lane, London WC2B 5TF. Please print clearly.

ACORN USER'S

DIARY

The games people play...

Tynesoft is nothing if not topical. Following the company's coup in bringing out an Ian Botham game at the height of the drugs scandal, Tynesoft has again displayed its superb timing by bringing out a computer simulation of the Commonwealth Games.

We haven't seen the game yet, but it is rumoured that the program makes extensive use of the delete key, particularly when it comes to selecting teams.

Now we can exclusively reveal that another firm is trying to muscle in on this obviously lucrative area. Newkey Broonsoft's first attempt at topicality is a travel adventure program entitled *Geoffrey Howe's African Tour*. The object of the game is to travel through a mythical land meeting up with absolutely no interesting characters whatsoever.

A feature of the game is that whenever the program asks you a question you must avoid answering it directly. A straightforward reply will result in you being demoted to Minister of Public Conveniences, although you will, of course, put out a statement claiming it to be a promotion.

Dense is the word for it

Do you want twice as much memory from your micro? Well, one computer journalist obviously does. This poor deluded person, working for another BBC computer magazine (no names, our lawyers are getting nervous), recently rang the manufacturers of a disc filing system with a query.

The filing system in question allows single and double density

operation, and also allows you to use sideways RAM as a RAM disc. What the hack wanted to know was how to get double density storage in sideways RAM.

Perhaps the question isn't as silly as it seems. Perhaps the hack has found some wonderful new compaction technique for squeezing every byte into a nybble. Perhaps the BBC micro supports double density RAM and Acorn simply hasn't told anyone. Perhaps that was a pig that just flew past my window.

Val goes home

Valerie Holt, who until recently was burdened with the title 'Corporate Communications Manager' at Acorn, has left the company. The move is put down to 'pressure at home'.

However, Valerie, who once revelled in shouting matches with domineering publisher Robert Maxwell, was known to be frustrated at not being able to establish the same relationship with the passive Acorn boss Brian Long.

A loss to Acorn, one of the bastions of male computing.

Tea-leaf on the premises

Following reports of early-morning break-ins at the offices of Redwood Publishing, *Acorn User* sleuths have now traced the culprit. It turns out to be none other than our very own — until recently, that is — **Dear Kitty**. Although she left us for the illusion of fame and fortune at another company (see last month's diary), poor homesick Kitty has been coming back to make cups of tea. (They don't get a kettle at *Computing*.)

Fresh from the nursery

At last, the first picture of the new Baby Beeb. It's not quite what we were expecting, admittedly, but should provide welcome relief to harassed parents.

Special features on the new micro include a unique digital-to-gripe-water interface and a whole new range of operating system commands, such as *BURP, *CHANGE and *DUMMY. Other star commands have assumed new meanings with the BB. The most important of these are *INSERT (illustrated), *UNPLUG and the dreaded *DUMP.

The picture was supplied by the Reverend 'Taffy' Davies, a man of obvious humour and no mean skill with the pen.

Curry takes a powder

Gossip about a possible link between Chris Curry's sudden move away from Acorn and the announcement of Tynesoft's *Vindaloo* game appears to be unfounded.

Curry has sold his remaining shares in Acorn in order to devote his time to selling Acorn micros — well it must make some kind of sense to someone.

No mention has been made of any involvement by Curry in the games software market, so we have to assume that the appearance of *Vindaloo* is just one of the bizarre coincidences that you get in this crazy business.

The game is considered by the trade to be hot stuff, and should be running up the charts soon. Unfortunately, when we tried to contact Mr Curry for a comment he was indisposed.

Who cares?

The *Acorn User* offices have been swamped by an entry for last month's Knead-to-Know competition, where we asked you to guess the identity of an *AU* contributor from an early photograph. The entrant, one Nikolas Evanovitch, claims to know the mystery character personally.

Meanwhile, neighbours of the *AU* contributor in question have noted increased police activity around his house following the disappearance of his wife, Jill, who supplied us with the picture, and his sudden keen interest in gardening.

STOP PRESS: As we were going to press two more entries flooded in to the office. Paul Aston of Shepperton believes the knees to belong to John Cleese while El Smith of Dulwich thinks they are Jimmy Hill's. However neither of these two is famous for being an *AU* contributor.

COLOURJET

36 COLOUR INK JET PRINTER

IBM pc compatible
including character set

NOW 132 CHARACTERS/LINE COMPRESSED

Integrex specialises in custom hardware/software adaptations for OEM's etc, from simple 'badge engineering' to major code/character set changes plus special purpose internal interfaces

Standard options:

- RS232 interface, up to 16k buffer
- Serial videotex interface
- 125 colour BTX CEPT-3 interface
- 256k byte internal buffer
- IBM pc screen dump disc (all 16 lo. res. colours)

INTEGREX LTD.

Specifications:

- 640 dots/line and 1280 dots/line hi. res. mode.
- Up to 252 dots/inch resolution
- Videotex printing mode
- Centronics parallel interface
- Friction feed roll paper with single sheet feed A4.
- 40 cps in full colour
- Overhead transparency printing
- Ink cartridges, 4 million character life

RGB Frame
Grabber Compatible

Virtually
silent

ALREADY A NUMBER 1 BEST SELLER

COMPATIBLE WITH THE BBC B, B+ AND MASTER SERIES

THRUST

The first mission — destroy the reactor for a bonus score.

Retrieve the Pod and make your escape.

Collect the fuel and steer clear of the limpet guns.

Shoot the activator to open the sliding entrance door.

REVIEWS OF THRUST ALREADY PUBLISHED

Zzap! 64: "The most enjoyable game we've played for ages..." — A ZZAPI SIZZLER.

Computer & Video Games: "Thrust is a simple but totally addictive game..." — A C+VG HIT!

Now available for the BBC Micro and Electron

The Commodore-64 version of Thrust (published by Firebird Software) shot immediately to No.1 in the software charts and was greeted with rave reviews throughout the computer press. Equally addictive and just as enjoyable, the BBC Micro and Electron versions of the game are set to emulate this performance.

Thrust is simple, fun-to-play, yet totally realistic and intensely challenging. Your mission is to visit 24 planets in turn collecting the Klystron Pods and, if possible, destroying each planet's reactor system. Your spaceship and the pods, which are heavier than the spaceship, move authentically subject to the laws of gravity, inertia and momentum — indeed the game's author, Jeremy Smith holds a First-Class Honours degree in Physics! Careful planning of your manoeuvres is essential in order to prevent the pods swinging out of control and dragging your spaceship to destruction.

To add to the challenge, the planets have different gravity rates and, as you progress through the game, some have "reverse gravity" or "invisible landscapes". They are defended by automatic limpet guns strategically placed to protect the pods and fuel tanks — the only source of replenishment for your limited fuel supply. The smooth screen-scrolling, which is exemplary, and the realistic action gives the player a fascinating feeling of floating through space.

PRICE: £7.95 (cassette), £11.95 (BBC disc)

COMPETITION COMPETITION COMPETITION COMPETITION

If you complete the mission by collecting the pods from all 24 planets, you can enter our competition. The prizes include the beautiful trophy (pictured on the right), £250 cash, and 3 copies of the captivating book "The New Atlas of the Universe" by Patrick Moore. Closing date: 31st January, 1987.

Dept. TH2, Regent House,
Skinner Lane,
Leeds LS7 1AX.
Telephone: 0532 459453.

24 HOUR TELEPHONE ANSWERING SERVICE FOR ORDERS

- OUR GUARANTEE**
- All mail orders are despatched within 24 hours by first-class post.
 - Postage and packing is free.
 - Faulty cassettes and discs will be replaced immediately.
